

# WGI Innovations, Ltd.

**Electronic Game Call**

**Model: EX1-TX, EM1-TX**

**May 17, 2012**

**Report No.: 12020293-FCC-R1  
(This report supersedes NONE)**

Modifications made to the product : None

This Test Report is Issued Under the Authority of:

		
<b>William Long Compliance Engineer</b>	<b>Alex Liu Technical Manager</b>	

This test report may be reproduced in full only.  
Test result presented in this test report is applicable to the representative sample only.

**RF Test Report**  
**TO: FCC 15.231:2012**

**SIEMIC, INC.**  
Accessing global markets

## Laboratory Introduction

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to [testing](#) and [certification](#), SIEMIC provides initial design reviews and [compliance management](#) through out a project. Our extensive experience with [China](#), [Asia Pacific](#), [North America](#), [European](#), and [international](#) compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the [global markets](#).

### Accreditations for Conformity Assessment

Country/Region	Accreditation Body	Scope
USA	FCC, A2LA	EMC , RF/Wireless , Telecom
Canada	IC, A2LA, NIST	EMC, RF/Wireless , Telecom
Taiwan	BSMI , NCC , NIST	EMC, RF, Telecom , Safety
Hong Kong	OFTA , NIST	RF/Wireless ,Telecom
Australia	NATA, NIST	EMC, RF, Telecom , Safety
Korea	KCC/RRA, NIST	EMI, EMS, RF , Telecom, Safety
Japan	VCCI, JATE, TELEC, RFT	EMI, RF/Wireless, Telecom
Mexico	NOM, COFETEL, Caniety	Safety, EMC , RF/Wireless, Telecom
Europe	A2LA, NIST	EMC, RF, Telecom , Safety

### Accreditations for Product Certifications

Country	Accreditation Body	Scope
USA	FCC TCB, NIST	EMC , RF , Telecom
Canada	IC FCB , NIST	EMC , RF , Telecom
Singapore	iDA, NIST	EMC , RF , Telecom
EU	NB	EMC & R&TTE Directive
Hong Kong	OFTA (US002)	RF , Telecom
Japan	MIC, (RCB 208)	RF , Telecom

## **1 Executive Summary & EUT information**

The purpose of this test programme was to demonstrate compliance of the WGI Innovations, Ltd., The Electronic Game Call, and model: EX1-TX, EM1-TX against the current Stipulated Standards. The Electronic Game Call has demonstrated compliance with the FCC 15.231:2012.

### **EUT Information**

<b>EUT Description</b>	<b>Electronic Game Call</b>
<b>Model No</b>	<b>EX1-TX, EM1-TX(note)</b>
<b>Serial No</b>	<b>N/A</b>
<b>Input Power</b>	<b>3V DC battery of power supply</b>
<b>Classification Per Stipulated Test Standard</b>	<b>Per FCC part 15.231:2012</b>

**Note: EM1-TX has the same design as EX1-TX.**

### **3 MODIFICATION**

**NONE**

## 4 TEST SUMMARY

The product was tested in accordance with the following specifications.  
All testing has been performed according to below product classification:

### Test Results Summary

Test Standard	Description	Pass / Fail
CFR 47 Part 15.231: 2012		
15.203	Antenna Requirement	Pass
15.207	Conducted Emissions Voltage	N/A
15.231(b)	Fundamental & Radiated Spurious Emission	Pass
15.231(c)	20dB Bandwidth	Pass
15.231(a)(1)	Deactivation	Pass

ANSI C63.4: 2009

PS: All measurement uncertainties are not taken into consideration for all presented test result.

Preliminary radiated emission testing has been performed on X, Y, Z axis, only worst case test result is presented in this test report.

## **5 MEASUREMENTS, EXAMINATION AND DERIVED RESULTS**

### **5.1 Antenna Requirement**

**Requirement(s):** 47 CFR §15.203

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

Antenna requirement must meet at least one of the following:

- a) Antenna must be permanently attached to the device.
- b) Antenna must use a unique type of connector to attach to the device.
- c) Device must be professionally installed. Installer shall be responsible for ensuring that the correct antenna is employed with the device.

The antenna is permanently attached to the device which meets the requirement.

## 5.2 Conducted Emissions Voltage

Requirement:

Frequency of emission (MHz)	Conducted limit (dB $\mu$ V)	
	Quasi-peak	Average
0.15–0.5	66 to 56*	56 to 46*
0.5–5	56	46
5–30	60	50

\*Decreases with the logarithm of the frequency.

### Procedures:

- All possible modes of operation were investigated. Only the 6 worst case emissions measured, using the correct CISPR and Average detectors, are reported. All other emissions were relatively insignificant.
- A "-ve" margin indicates a PASS as it refers to the margin present below the limit line at the particular frequency.
- Conducted Emissions Measurement Uncertainty  
All test measurements carried out are traceable to national standards. The uncertainty of the measurement at a confidence level of approximately 95% (in the case where distributions are normal), with a coverage factor of 2, in the range 9kHz – 30MHz (Average & Quasi-peak) is  $\pm 3.5$ dB.
- Environmental Conditions
 

Temperature	25°C
Relative Humidity	48%
Atmospheric Pressure	1019mbar
- Test date : N/A  
Tested By : William Long

**Test result: N/A (Batteries operated)**

## 5.3 20dB Occupied Bandwidth

1. 20dB bandwidth was measured by conducted method using a spectrum analyzer.
2. Environmental Conditions

Temperature	25°C
Relative Humidity	51%
Atmospheric Pressure	1009mbar
3. Test Date: May 12, 2012  
Test By: William Long

### Test Result:

Fundamental Frequency (MHz)	Measured 20dB Bandwidth (KHz)	FCC 15.231 Limit (KHz)	Result
433.946	154	1084.75	Pass

Date: 12.MAY.2012 00:34:15

## 5.4 Radiated Fundamental and Spurious Emission

1. Radiated emissions were measured according to ANSI C63.4. The EUT was set 3 meter away from the measuring antenna. The loop antenna was positioned 1meter above the ground from the center of the loop. The measuring bandwidth was set to 10KHz. All possible modes of operation were investigated. Only the worst case emissions measured, All other emissions were relatively insignificant.
2. A "-ve" margin indicates a PASS as it refers to the margin present below the limit line at the particular frequency.
3. Sample Calculation: Corrected Amplitude=Raw Amplitude(dBuV/m)+ACF(dB)+Cable Loss(dB)-Distance Correction Factor.  
Sample Calculation:  
1) Corrected Amplitude= Raw Amplitude(dBuV/m)+ACF(dB)+Cable Loss(dB)-Distance Correction Factor  
2) Average = peak reading + 20log(duty cycle)
4. Radiated Emissions Measurement Uncertainty  
All test measurements carried out are traceable to national standards. The uncertainty of the measurement at a confidence level of approximately 95% (in the case where distributions are normal), with a coverage factor of 2, in the range 30MHz – 1GHz( QP only3m & 10m) is +5.6/-4.5dB(for EUTs<0.5m×0.5m×0.5m).In range of 1-40GHz) is ±3.6dB.
5. Environmental Conditions

Temperature	24°C
Relative Humidity	50%
Atmospheric Pressure	1009mbar
6. Test date : April 19, 2012  
Tested By : William Long

### Standard Requirement:

Fundamental frequency (MHz)	Field strength of fundamental (microvolts/meter)	Field strength of spurious emissions (microvolts/meter)
40.66-40.70	2250	225
70-130	1250	125
130-174	1250 to 3750	125 to 375
174-260	3750	375
260-470	3750-12500	375 to 1250
Above 470	12500	1250

Note: All 3 axes have been investigated. Only worst case is presented in the test report.

**Test Result:** Pass

**Fundamental Measurement @ 433.946MHz @3 Meter FCC 15.231(a)**

Frequency (MHz)	Reading (dBμV/m)	Azimuth	Polarity	Height(m)	Factors(dB)	FCC 15.231(a) Limit (dBuV)	Margin(dB)	Comments
433.946	82.20	185.70	V	2.00	-29.19	100.8	-18.60	Pk
433.946	72.05	-	V	-	-	80.8	-8.75	Ave
433.946	88.93	321.10	H	2.00	-29.19	100.8	-11.87	Pk
433.946	78.78	-	H	-	-	80.8	-2.02	Ave

**Spurious Emissions (<1GHz) Measurement @ 3 Meter FCC 15.231(a)**

Frequency (MHz)	Reading (dBμV/m)	Azimuth	Polarity	Height(m)	Factors(dB)	FCC 15.231(a) Limit (dBuV)	Margin(dB)	Comments
867.892	51.92	120.20	V	1.00	-20.74	80.8	-28.88	Pk
867.892	41.77	-	V	-	-	60.8	-19.03	Ave
867.892	68.99	324.20	H	2.00	-21.42	80.8	-11.81	Pk
867.892	58.84	-	H	-	-	60.8	-1.96	Ave

- Notes: 1. Duty cycle is 31.08%,  $20\log(\text{duty cycle}) = -10.15\text{dB}$  correction was used to determine the average level from the peak reading. Average = peak reading +  $20\log(\text{duty cycle})$ ,  
Final Average = peak reading - 10.15dB
- All the data measurement of peak values.
  - FCC Limit for Average Measurement =  $41.6667(433.9) - 7083.3333 = 10995.84783\mu\text{V/m} = 80.8\text{dB}\mu\text{V/m}$
  - Average pulsed signal over one complete pulse train or 100 ms time frame if pulse train exceeds 100 ms
  - Maximum average in 100 ms
  - Calculate duty cycle for pulse train or 100 ms
  - Duty cycle =  $(t_1 + t_2 + t_3 + \dots + t_n) / T$  where  $t_n$  = pulse width, T = pulse train length or 100 ms

**Spurious Emissions (>1GHz) Measurement @ 3 Meter FCC 15.231(a)**

1.302	-	-	V	-	-	46.41	54	-7.59	Ave
1.736	181.3	2.04	V	-23.33	55	57.21	80.8	-23.59	Peak
1.736	-	-	V	-	-	47.06	60.8	-13.74	Ave
2.170	210.7	1.03	V	-20.66	55	57.83	80.8	-22.97	Peak
2.170	-	-	V	-	-	47.68	60.8	-13.12	Ave
2.603	76.6	2.02	V	-18.42	55	60.14	80.8	-20.66	Peak
2.603	-	-	V	-	-	49.99	60.8	-10.81	Ave
3.037	154.8	1.22	V	-15.46	55	62.03	80.8	-18.77	Peak
3.037	-	-	V	-	-	51.88	60.8	-8.92	Ave
3.471	59.8	1.13	V	-11.48	55	58.63	80.8	-22.17	Peak
3.471	-	-	V	-	-	48.48	60.8	-12.32	Ave
3.905	157.5	1.05	V	-9.25	55	55.13	74	-18.87	Peak
3.905	-	-	V	-	-	44.98	54	-9.02	Ave
4.339	210.6	2.01	V	-6.73	55	53.52	74	-20.48	Peak
4.339	-	-	V	-	-	43.37	54	-10.63	Ave

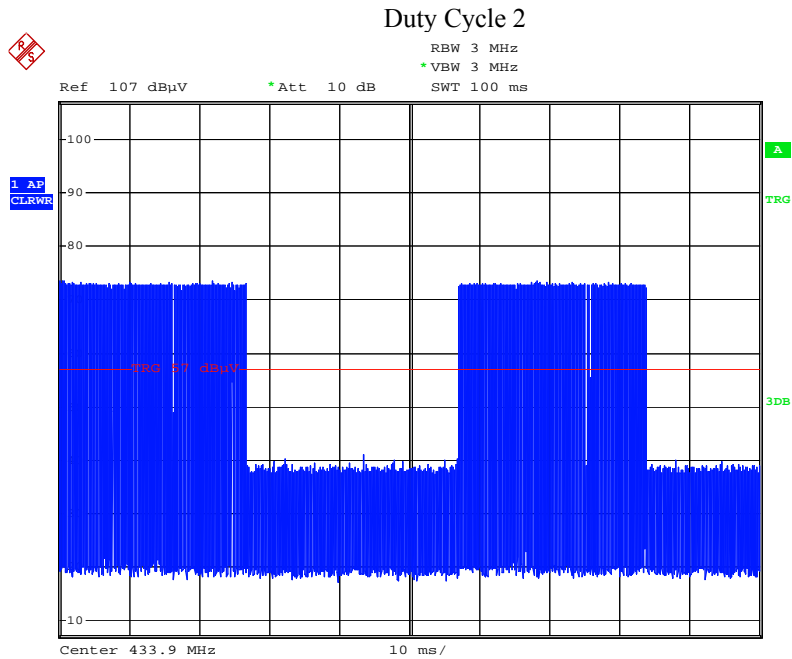

Note: Duty cycle is 31.08%,  $20\log(\text{duty cycle}) = -10.15\text{dB}$  correction was used to determine the average level from the peak reading. Average = peak reading +  $20\log(\text{duty cycle})$ , final Average = peak reading -10.15dB

**Note: Because the Pulse Emission Bandwidth is less than measuring Bandwidth, so the PDCF is not needed.**

Pulse Duty Cycle:  
Wide Pulse: 0.23ms  
Narrow Pulse: 0.13ms  
Duty cycle=  $(0.23 \times 41 \times 2 + 0.13 \times 47 \times 2) / 100 = 31.08\%$   
Average Duty Factor:  $20 \times \log(\text{Duty Cycle}) = -10.15\text{dB}$

**Annex A.ii. CONDUCTED EMISSIONS TEST DESCRIPTION**

**Test Set-up**

1. The EUT and supporting equipment were set up in accordance with the requirements of the standard on top of a 1.5m x 1m x 0.8m high, non-metallic table, as shown in Annex B.
2. The power supply for the EUT was fed through a 50Ω/50μH EUT LISN, connected to filtered mains.
3. The RF OUT of the EUT LISN was connected to the EMI test receiver via a low-loss coaxial cable.
4. All other supporting equipments were powered separately from another main supply.

**Test Method**

1. The EUT was switched on and allowed to warm up to its normal operating condition.
2. A scan was made on the NEUTRAL line (for AC mains) or Earth line (for DC power) over the required frequency range using an EMI test receiver.
3. High peaks, relative to the limit line, were then selected.
4. The EMI test receiver was then tuned to the selected frequencies and the necessary measurements made with a receiver bandwidth setting of 10 KHz. For FCC tests, only Quasi-peak measurements were made; while for CISPR/EN tests, both Quasi-peak and Average measurements were made.
5. Steps 2 to 4 were then repeated for the LIVE line (for AC mains) or DC line (for DC power).

**Sample Calculation Example**

At 20 MHz limit = 250 μV = 47.96 dBμV

Transducer factor of LISN, pulse limiter & cable loss at 20 MHz = 11.20 dB

Q-P reading obtained directly from EMI Receiver = 40.00 dBμV  
(Calibrated for system losses)

Therefore, Q-P margin = 47.96 – 40.00 = 7.96 i.e. **7.96 dB below limit**

**Annex A. iii. RADIATED EMISSIONS TEST DESCRIPTION**

**EUT Characterisation**

EUT characterisation, over the frequency range from 30MHz to 10<sup>th</sup> Harmonic, was done in order to minimise radiated emissions testing time while still maintaining high confidence in the test results.

The EUT was placed in the chamber, at a height of about 0.8m on a turntable. Its radiated emissions frequency profile was observed, using a spectrum analyzer /receiver with the appropriate broadband antenna placed 3m away from the EUT. Radiated emissions from the EUT were maximised by rotating the turntable manually, changing the antenna polarisation and manipulating the EUT cables while observing the frequency profile on the spectrum analyzer / receiver. Frequency points at which maximum emissions occurred, clock frequencies and operating frequencies were then noted for the formal radiated emissions test at the Open Area Test Site (OATS).

**Test Set-up**

1. The EUT and supporting equipment were set up in accordance with the requirements of the standard on top of a 1.5m X 1.0m X 0.8m high, non-metallic table.
2. The filtered power supply for the EUT and supporting equipment were tapped from the appropriate power sockets located on the turntable.
3. The relevant broadband antenna was set at the required test distance away from the EUT and supporting equipment boundary.

**Test Method**

The following procedure was performed to determine the maximum emission axis of EUT:

1. With the receiving antenna is H polarization, rotate the EUT in turns with three orthogonal axes to determine the axis of maximum emission.
2. With the receiving antenna is V polarization, rotate the EUT in turns with three orthogonal axes to determine the axis of maximum emission.
3. Compare the results derived from above two steps. So, the axis of maximum emission from EUT was determined and the configuration was used to perform the final measurement.

**Final Radiated Emission Measurement**

1. Setup the configuration according to figure 1. Turn on EUT and make sure that it is in normal function.
2. For emission frequencies measured below 1 GHz, a pre-scan is performed in a shielded chamber to determine the accurate frequencies of higher emissions will be checked on a open test site. As the same purpose, for emission frequencies measured above 1 GHz, a pre-scan also be performed with a 1 meter measuring distance before final test.
3. For emission frequencies measured below and above 1 GHz, set the spectrum analyzer on a 100 kHz and 1 MHz resolution bandwidth respectively for each frequency measured in step 2.
4. The search antenna is to be raised and lowered over a range from 1 to 4 meters in horizontally polarized orientation. Position the highness when the highest value is indicated on spectrum analyzer, then change the orientation of EUT on test table over a range from 0 ° to 360 ° with a speed as slow as possible, and keep the azimuth that highest emission is indicated on the spectrum analyzer. Vary the antenna position again and record the highest value as a final reading.
5. Repeat step 4 until all frequencies need to be measured were complete.
6. Repeat step 5 with search antenna in vertical polarized orientations.

During the radiated emission test, the Spectrum Analyzer was set with the following configurations:

Frequency Band (MHz)	Function	Resolution bandwidth	Video Bandwidth
30 to 1000	Peak	100 kHz	100 kHz
Above 1000	Peak	1 MHz	1 MHz
	Average	1 MHz	10 Hz

**Sample Calculation Example**

The field strength is calculated by adding the Antenna Factor and Cable Factor, and subtracting the Amplifier Gain (if any) from the measured reading. For the limit is employed average value, therefore the peak value can be transferred to average value by subtracting the duty factor. The basic equation with a sample calculation is as follows:

$$\text{Peak} = \text{Reading} + \text{Corrected Factor}$$

where

$$\text{Corr. Factor} = \text{Antenna Factor} + \text{Cable Factor} - \text{Amplifier Gain (if any)}$$

And the average value is

$$\text{Average} = \text{Peak Value} + \text{Duty Factor or}$$

$$\text{Set RBW} = 1\text{MHz, VBW} = 10\text{Hz.}$$

Note:

If the measured frequencies are fall in the restricted frequency band, the limit employed must be quasi peak value when frequencies are below or equal to 1 GHz. And the measuring instrument is set to quasi peak detector function.
