# TEST REPORT

| Application No.:          | SHCR2406001132AT  |  |
|---------------------------|---|--|
| FCC ID:                   | YWO-MIPT10MR  |  |
| Applicant:                | ELECOM CO., LTD.  |  |
| Address of Applicant:     | Fushimimachi 4-1-1, Chuo-ku, Osaka City, Osaka, Japan 541-8765  |  |
| Manufacturer:             | ELECOM CO., LTD.  |  |
| Address of Manufacturer:  | Fushimimachi 4-1-1, Chuo-ku, Osaka City, Osaka, Japan 541-8765  |  |
| Factory:                  | Success Compu China   |  |
| Address of Factory:       | 201 and 301, Building 3, No.1 Yangkeng Road, Shanxia Community, Pinghu Street, Longgang District, Shenzhen, Guangdong, China    |  |
| Equipment Under Test (EUT | ):  |  |
| EUT Name:                 | Wireless Trackball Mouse  |  |
| Model No.:                | MIPT10MR, M-IPT10MRSBK, M-IPT10MRSABK   |  |
| Remark:                   | Please refer to section 2 of this report which indicates which model was actually tested and which were electrically identical. |  |
| Trade Mark:               | ELECOM  |  |
| Standard(s) :             | 47 CFR Part 15, Subpart C 15.249  |  |
| Date of Receipt:          | 2024-06-14  |  |
| Date of Test:             | 2024-06-26 to 2024-07-10  |  |
| Date of Issue:            | 2024-07-15  |  |
| Test Result:              | Pass*   |  |

\* In the configuration tested, the EUT complied with the standards specified above.

SHEM-TRF-001 Rev. 02 Sep01, 2023

Report No.: SHCR240600113202 Page: 5 of 33

# 4 General Information

### 4.1 Details of E.U.T.

| Power supply:        | DC 3V (2*AA Battery)            |  |
|----------------------|---------------------------------|--|
| Test Voltage:        | DC 3V                           |  |
| Operating Frequency: | 2405MHz-2476MHz                 |  |
| Channel Number:      | 12 Channels                     |  |
| Modulation Type:     | GFSK                            |  |
| Antenna Type:        | FPC Antenna                     |  |
| Antenna Gain:        | 2dBi (Provided by manufacturer) |  |
| Receiver Category:   | 1                               |  |

EUT channels and frequencies list:

| Channel   | Frequency<br>(MHz) | Channel | Frequency<br>(MHz) | Channel | Frequency<br>(MHz) |
|---|--------------------|---------|--------------------|---------|--------------------|
| 5   | 2405               | 7       | 2407               | 8       | 2408               |
| 22  | 2422               | 23      | 2423               | 27      | 2427               |
| 47  | 2447               | 51      | 2451               | 52      | 2452               |
| 73  | 2473               | 74      | 2474               | 76      | 2476               |
| Note: Erequency (MHz) = $2400+n$ n=channel number |                    |         |                    |         |                    |

Note: Frequency (MHz) = 2400+n, n=channel number.

CH list which is used on Firmware is 5, 7, 8, 22, 23, 27, 47, 51, 52, 73, 74, 76.

#### 4.2 Description of Support Units

| Description                  | Manufacturer | Model No.    | Serial No. |
|------------------------------|--------------|--------------|------------|
| Laptop                       | LENOVO       | L460         | -          |
| SecureCRT                    | VanDyke      | V 6.2.0      | -          |
| Serial port adapter<br>plate | -            | Test Plate 3 | -          |

#### 4.3 Measurement Uncertainty

| No. | Item                             | Measurement Uncertainty |
|-----|----------------------------------|-------------------------|
| 1   | Radio Frequency                  | 8.4 x 10 <sup>-8</sup>  |
| 2   | Timeout                          | 2s                      |
| 3   | Duty cycle                       | 0.4%                    |
| 4   | Occupied Bandwidth               | 3%                      |
| 5   | RF conducted power               | 0.6dB                   |
| 6   | RF power density                 | 2.9dB                   |
| 7   | Conducted Spurious emissions     | 0.75dB                  |
| 0   | DE Dedicted newer                | 5.2dB (Below 1GHz)      |
| 8   | RF Radiated power                | 5.9dB (Above 1GHz)      |
|     |                                  | 4.2dB (Below 30MHz)     |
| 9   | Dedicted Sourious optionies test | 4.5dB (30MHz-1GHz)      |
| 9   | Radiated Spurious emission test  | 5.1dB (1GHz-6GHz)       |
|     |                                  | 5.4dB (6GHz-18GHz)      |
| 10  | Temperature test                 | 1°C                     |
| 11  | Humidity test                    | 3%                      |
| 12  | Supply voltages                  | 1.5%                    |

SHEM-TRF-001 Rev. 02 Sep01, 2023

Report No.: SHCR240600113202 Page: 6 of 33

| -     |                                 |  |
|-------|---------------------------------|--|
| 13    | Time                            | 3%   |
| Note: | The measurement uncertainty rep | resents an expanded uncertainty expressed at |

Note: The measurement uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

#### 4.4 Test Location

All tests were performed at:

SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. E&E Lab 588 West Jindu Road, Xinqiao, Songjiang, 201612 Shanghai, China Tel: +86 21 6191 5666 Fax: +86 21 6191 5678

No tests were sub-contracted.

Note:

SGS is not responsible for wrong test results due to incorrect information (e.g. max. clock frequency, highest internal frequency, antenna gain, cable loss, etc.) is provided by the applicant. (if applicable).
SGS is not responsible for the authenticity, integrity and the validity of the conclusion based on results of the data provided by applicant. (if applicable).
Sample source: sent by customer.

#### 4.5 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### • A2LA (Certificate No. 6332.01)

SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. is accredited by the American Association for Laboratory Accreditation(A2LA).

#### • FCC (Designation Number: CN1301)

SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. has been recognized as an accredited testing laboratory.

#### • ISED (CAB Identifier: CN0020)

SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. EMC Laboratory has been recognized by Innovation, Science and Economic Development Canada (ISED) as an accredited testing laboratory. Company Number: 8617A

#### VCCI (Member No.: 3061)

The 3m Semi-anechoic chamber and Shielded Room of SGS-CSTC Standards Technical Services (Shanghai) Co., Ltd. has been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: R-13868, C-14336, T-12221, G-10830 respectively.

4.6 Deviation from Standards

None

### 4.7 Abnormalities from Standard Conditions

None

Report No.: SHCR240600113202 Page: 7 of 33

#### **Equipment List** 5

Report No.: SHCR240600113202 Page: 8 of 33

# 6 Radio Spectrum Technical Requirement

#### 6.1 Antenna Requirement

#### 6.1.1 Test Requirement:

47 CFR Part 15, Subpart C 15.203

#### 6.1.2 Conclusion

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### EUT Antenna:

The antenna is FPC antenna and no consideration of replacement. The best case gain of the antenna is 2 dBi.

Antenna location: Refer to Internal photos

# 7 Radio Spectrum Matter Test Results

#### 7.1 Field Strength of the Fundamental Signal (15.249(a))

| Test Requirement | 47 CFR Part 15, Subpart C 15.249(a) |
|------------------|-------------------------------------|
| Test Method:     | ANSI C63.10 (2013) Section 6.5&6.6  |

Limit:

| Fundamental<br>frequency(MHz) | Field strength of<br>fundamental(millivolts/meter) | Field strength of<br>harmonics(microvolts/meter) |
|-------------------------------|--|--|
| 902-928                       | 50   | 500  |
| 2400-2483.5                   | 50   | 500  |
| 5725-5875                     | 50   | 500  |
| 24000-24250                   | 250  | 2500   |

Remark: The frequencies above 1000MHz are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.

For fundamental frequency in "902-928MHz", the field strength of fundamental is based on Quasi-Peak.

#### 7.1.1 E.U.T. Operation

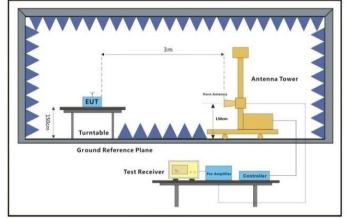

Operating Environment:

| •   | 0         |         |           |           |                       |      |      |
|-----|-----------|---------|-----------|-----------|-----------------------|------|------|
| Tem | perature: | 26.3 °C | Humidity: | 64.3 % RH | Atmospheric Pressure: | 1010 | mbar |

#### 7.1.2 Test Mode Description

| Pre-scan /<br>Final test | Mode<br>Code | Description  |
|--------------------------|--------------|--|
| Final test               | 01           | TX mode_Keep the EUT in transmitting with modulation mode. |

#### 7.1.3 Test Setup Diagram

Above 1GHz

SHEM-TRF-001 Rev. 02 Sep01, 2023

Report No.: SHCR240600113202 Page: 10 of 33

#### 7.1.4 Measurement Procedure and Data

a. For below 1GHz, the EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 or 10 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.

b. For above 1GHz, the EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter fully-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.

c.The EUT was set 3 or 10 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.

d. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

e.For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.

f.The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

g.If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

h.Test the EUT in the lowest channel, the middle channel, the Highest channel.

i.The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is the worst case.

j.Repeat above procedures until all frequencies measured was complete.

Remark: Level= Read Level+ Cable Loss+ Antenna Factor- Preamp Factor

| Frequency<br>(MHz) | Read Level<br>(dBuV) | Factor<br>(dB/m) | Level<br>(dBuV/m) | Limit Line<br>(dBuV/m) | Over Limit<br>(dB) | Detector | Polarization |
|--------------------|----------------------|------------------|-------------------|------------------------|--------------------|----------|--------------|
| 2405               | 96.84                | -2.98            | 93.86             | 94                     | -0.14              | Peak     | Horizontal   |
|                    | 93.07                | -2.98            | 90.09             | 94                     | -3.91              | Peak     | Vertical     |

| Frequency<br>(MHz) | Read Level<br>(dBuV) | Factor<br>(dB/m) | Level<br>(dBuV/m) | Limit Line<br>(dBuV/m) | Over Limit<br>(dB) | Detector | Polarization |
|--------------------|----------------------|------------------|-------------------|------------------------|--------------------|----------|--------------|
| 2447               | 82.03                | -2.91            | 79.12             | 94                     | -14.88             | Peak     | Horizontal   |
|                    | 94.96                | -2.91            | 92.05             | 94                     | -1.95              | Peak     | Vertical     |

| Frequ<br>(Mi | ,  | Read Level<br>(dBuV) | Factor<br>(dB/m) | Level<br>(dBuV/m) | Limit Line<br>(dBuV/m) | Over Limit<br>(dB) | Detector | Polarization |
|--------------|----|----------------------|------------------|-------------------|------------------------|--------------------|----------|--------------|
| 0.4          | 70 | 95.53                | -2.77            | 92.76             | 94                     | -1.24              | Peak     | Horizontal   |
| 24           | 01 | 89.93                | -2.77            | 87.16             | 94                     | -6.84              | Peak     | Vertical     |

Remark:

1) The basic equation with a sample calculation is as follows: Level = Read Level + Factor.

(The Factor is calculated by adding the Antenna Factor, Cable Loss and Preamp Factor) If the Peak value below the Average Limit, the Average test doesn't perform for this submission.

SHEM-TRF-001 Rev. 02 Sep01, 2023

Report No.: SHCR240600113202 11 of 33 Page:

#### 7.2 Restricted Band Around Fundamental Frequency

| Test Requirement | 47 CFR Part 15, Subpart C 15.205 & 15.249(d) & 15.209 |
|------------------|---|
| Test Method:     | ANSI C63.10 (2013) Section 6.10.5                     |

Limit:

| Frequency     | Limit (dBuV/m @3m) | Remark           |
|---------------|--------------------|------------------|
| 30MHz-88MHz   | 40.0               | Quasi-peak Value |
| 88MHz-216MHz  | 43.5               | Quasi-peak Value |
| 216MHz-960MHz | 46.0               | Quasi-peak Value |
| 960MHz-1GHz   | 54.0               | Quasi-peak Value |
| Above 1GHz    | 54.0               | Average Value    |
| Above 1GHz    | 74.0               | Peak Value       |

Emission radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in Section 15.209, whichever is the lesser attenuation.

#### 7.3.3 Test Setup Diagram

SHEM-TRF-001 Rev. 02 Sep01, 2023

Report No.: SHCR240600113202 Page: 18 of 33

#### 7.3.4 Measurement Procedure and Data

a. For below 1GHz, the EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.

b. The EUT was set 3 or 10 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.

c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.

e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using quasi-peak method as specified and then reported in a data sheet.

g. Test the EUT in the lowest channel, the middle channel, the Highest channel.

h. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is the worst case.

i. Repeat above procedures until all frequencies measured was complete.

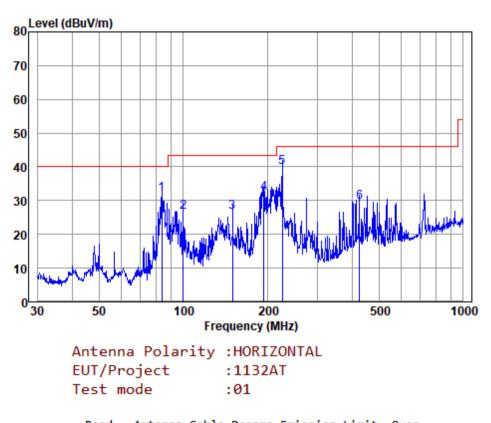

Remark:

1. Level= Read Level+ Cable Loss+ Antenna Factor- Preamp Factor

2. Scan from 9kHz to 30MHz, the disturbance below 30MHz was very low. The points marked on above plots are the highest emissions could be found when testing, so only above points had been displayed. The amplitude of spurious emissions from the radiator which are attenuated more than 20dB below the limit need not be reported.

#### 7.4.3 Test Setup Diagram

SHEM-TRF-001 Rev. 02 Sep01, 2023

Report No.: SHCR240600113202 Page: 22 of 33

#### 7.4.4 Measurement Procedure and Data

a. For above 1GHz, the EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter fully-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.

b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.

c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.

e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak or average method as specified and then reported in a data sheet.

g. Test the EUT in the lowest channel, the middle channel, the Highest channel.

h. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is the worst case.

i. Repeat above procedures until all frequencies measured was complete.

Remark:

1. Level= Read Level+ Cable Loss+ Antenna Factor- Preamp Factor

2. Scan from 18GHz to 40GHz, the disturbance above 18GHz was very low. The points marked on above plots are the highest emissions could be found when testing, so only above points had been displayed. The amplitude of spurious emissions from the radiator which are attenuated more than 20dB below the limit need not be reported.

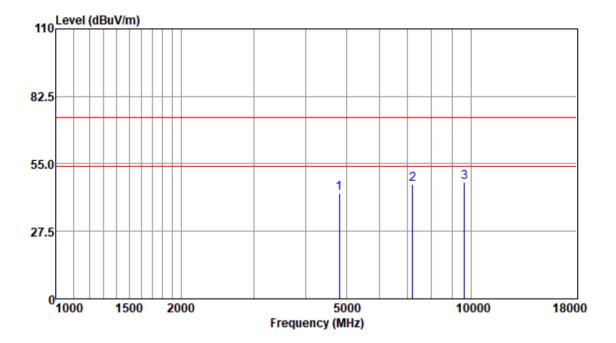

3. As shown in this section, for frequencies above 1GHz, the field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation. For the emissions whose peak level is lower than the average limit, only the peak measurement is shown in the report.
