

## RF Exposure information

The control panel transmitter operates according to FCC part 15 subpart C section 15.231. The standard does not contain RF Exposure limits.

The panel includes a single modular approved transmitter FCC ID:RI7HE910NA

The power density  $P \text{ (mW/cm}^2\text{)} = P_T / 4\pi r^2$

Maximum conducted output power given in FCC ID:RI7HE910NA module grant is 1648 mW (32.17 dBm) in 824.2-848.8 band. Limit for power density is  $f/1500 = 0.56 \text{ mW/cm}^2$  for 824-849 MHz for general population/uncontrolled exposure.

The gain of antenna used with the module in the control panel is 0 dBi.

The maximum equivalent isotropically radiated power EIRP is

$$P_T = 32.17 \text{ dBm} + 0 \text{ dBi} = 32.17 \text{ dBm} = 1648.2 \text{ mW}$$

The power density at 20 cm is calculated as follows:

$$1648.2 \text{ mW} / 4\pi (20 \text{ cm})^2 = 0.33 \text{ mW/cm}^2 < 0.56 \text{ mW/cm}^2$$

General public cannot be exposed to dangerous RF level.
