Declaration

We hereby declare that ES8000WG was designed so that both the Telit module FCC ID:RI7HE910NA and Essence Security 2.4 GHz transceiver can be operated either simultaneously or non-simultaneously.

Due to manufacturing reasons, we have decided to limit the operation to non-simultaneous transmission mode.

The devices will be marketed in non-simultaneous transmission operation only (factory pre-set during manufacturing process) and the customer has no option to change the transmission operation to simultaneous transmission.

The device was tested in simultaneous transmission mode. Operation in non-simultaneous transmission mode does not affect the test results.
