

Circuit Description

- a. The function of IC-RTD2270L_GR is used for video signal produced and output to LCD display screen, the clock signal of the 14.318MHz is base clock frequency, the signal input interface is VGA port and the maximum resolution is 1280*1024.
- b. The device is a LCD Touch screen monitor with the touch function, and the touch panel is enabled when connect to the PC via the USB port.
- c. The work voltage is DC 12V by power adaptor.
