ENGINEERING STATEMENT

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported testing was carried out on a sample equipment to demonstrate limited compliance with FCC 47 CFR Part 80, FCC 47 CFR Part 2, Industry Canada RSS-182 and ISEDC RSS-GEN. The sample tested was found to comply with the requirements defined in the applied rules.

EXECUTIVE SUMMARY

A sample of this product was tested and found to be compliant with FCC 47 CFR Part 80: 2018, FCC 47 CFR Part 2: 2018, Industry Canada RSS-182: Issue 5 (2012-01) and ISEDC RSS-GEN: Issue 5 and A1 (2019-03) for the tests detailed in section 1.3.

1.5 Product Information

1.5.1 Technical Description

The EUT is a Class B SOTDMA AIS transmitter with splitter, WiFi and Bluetooth.

1.6 Deviations from the Standard

No deviations from the applicable test standard were made during testing.

1.7 EUT Modification Record

The table below details modifications made to the EUT during the test programme.

The modifications incorporated during each test are recorded on the appropriate test pages.

| Modification State Description of Modification still fitted to EUT | | Modification Fitted By | Date Modification Fitted |

2.1 Bandwidths

2.1.1 Specification Reference

FCC 47 CFR Part 80, Clause 80.205 FCC 47 CFR Part 2, Clause 2.1049 ISEDC RSS-GEN, Clause 6.7.

2.1.2 Equipment Under Test and Modification State

B954, S/N: 001 - Modification State 0

2.1.3 Date of Test

18-November-2019 to 19-November-2019

2.1.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.205, Part 2.1049, ISEDC RSS-GEN Clause 6.6 and KDB 971168.

The EUT was transmitting at maximum power, modulated by the standard AIS test signal using PRBS packet payloads. The EUT was connected to a spectrum analyser via a cable and attenuator, the RBW of the spectrum analyser was set to at least 1% of the emission bandwidth and a video bandwidth of 3 times RBW, the occupied bandwidth measurement function of the analyser was used and the 99% bandwidth recorded.

The plots on the following pages show the resultant display from the Spectrum Analyser.

2.1.5 Environmental Conditions

2.2.2 Equipment Under Test and Modification State

B954, S/N: 001 - Modification State 0

2.2.3 Date of Test

19-November-2019

2.2.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.209 (a) and FCC CFR 47 Part 2.1055 (a) (2), (d) (1).

The EUT was set to transmit on maximum power with an unmodulated carrier on bottom and top channels. The EUT was connected to a spectrum analyser and a single marker was used to determine the frequency. The difference between the frequency of the fundamental and the frequency of the assigned channel in accordance with the manufacture's documentation was recorded. In accordance with 2.1055, the temperature was varied from -20°C to +50° in 10° steps at both minimum and maximum voltage extremes.

2.3 Spurious Emissions at Antenna Terminals

2.3.1 Specification Reference

FCC 47 CFR Part 80, Clause 80.211 FCC 47 CFR Part 2, Clause 2.1051 Industry Canada RSS-182, Clause 7.9 ISEDC RSS-GEN, Clause 6.13.

2.3.2 Equipment Under Test and Modification State

B954, S/N: 001 - Modification State 0

2.3.3 Date of Test

18-November-2019

2.3.4 Test Method

For emissions where the frequency is removed less than 250% of the authorized bandwidth measurements were performed conducted as follows:

The EUT was connected to a spectrum analyser via a cable and attenuator. The path loss between the EUT and analyser was calibrated using a network analyser and entered in to the spectrum analyser as a reference level offset. The reference level for the mask was established with an RBW approximately 2 or 3 times the emission bandwidth. The RBW was then reduced to at least 1% of the emission bandwidth, with a VBW of 3 times RBW. The mask as per FCC CFR 47 Part 80.211 (f) was applied.

For emissions where the frequency is removed more than 250% of the authorized bandwidth measurements were performed both conducted and radiated as follows:

Conducted: A network analyser was used to measure the path loss and the worst case was entered as a reference level offset in to the spectrum analyser. The EUT was connected to a spectrum analyser via an attenuator, filter and cable. Between 9 kHz and 300 MHz a notch filter was used tuned to the frequency of the fundamental. Between 300 MHz and 2 GHz a 300 MHz high pass filter was used.

The spectrum analyser was configured with an RBW as follows:

- 9 kHz to 150 kHz: 1 kHz
- 150 kHz to 30 MHz: 10 kHz
- 30 MHz to 1 GHz: 100 kHz
- 1 GHz to 2 GHz: 1 MHz

Where the RBW above is less than 30 kHz, it was ensured that there was at least 10*LOG(30/RBW) of margin between the trace and limit line as RSS-182 requires a measurement bandwidth of 30 kHz. The trace set to max hold using a peak detector.

Radiated measurements are recorded in section 2.7 of the present document.

2.4.3 Date of Test

18-November-2019

2.4.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.213 (d).

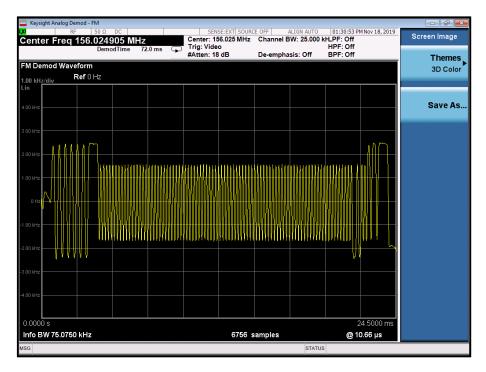

The EUT was transmitting at maximum power, modulated by the standard AIS test signals using either PRS, 01010101 or 00001111 packet payloads. The EUT was connected to a spectrum analyser via a cable and attenuator, using the FM demodulation function of the spectrum analyser, the peak frequency deviation was observed and shown in the plots on the following pages.

B954, S/N: 001 - Modification State 0

2.5.3 Date of Test

18-November-2019

2.5.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.215 (e) and KDB 971168.

The EUT was set to transmit on maximum power in turn on either AIS channel. The EUT was modulated using the standard AIS test signal with PRBS packet payload. The EUT was connected to a spectrum analyser via a cable and attenuator. The path loss was measured using a network analyser and entered as a reference level offset in the spectrum analyser. The RBW of the spectrum analyser was set to 100 kHz and the video bandwidth to 300 kHz with the trace set to max hold using a peak detector and the result was recorded.

2.6.1 Specification Reference

FCC 47 CFR Part 80, Clause 80.217(b)

2.6.2 Equipment Under Test and Modification State

B954, S/N: 001 - Modification State 0

2.6.3 Date of Test

19-November-2019

2.6.4 Test Method

The test was applied in accordance with the test method requirements of FCC CFR 47 Part 80.217 (b) and KDB 971168.

A network analyser was used to measure the path loss and the worst case was entered as a reference level offset in to the spectrum analyser for each frequency range of interest. The EUT was connected to a spectrum analyser via a cable and attenuator. The EUT was configured in a receive only state. The spectrum analyser settings were configured with an RBW of 100 kHz below 1 GHz and 1 MHz for frequencies greater than 1 GHz using a VBW of 3 times the RBW. The trace set to max hold using a peak detector and the plots recorded as shown.

2.7.2 Equipment Under Test and Modification State

B954, S/N: 001 - Modification State 0

2.7.3 Date of Test

01-December-2019

2.7.4 Test Method

The EUT was set to transmit on maximum power with each channel tested separately.

Testing was performed in accordance with FCC Part 80, Clause 80.211. The Out of Band Emissions limit is -13 dBm.

Prescans and final measurements were performed using the direct field strength method. The limit line on the prescan plots was calculated from equation c) in clause 5.2.7 of ANSI C63.26. Example Calculation: E (dBuV/m) = EIRP (dBm) - 20log (d) + 104.8 where (d) is the far field measurement distance. E (dBuV/m) = -13 - 20log (3) + 104.8

E (dBuV/m) = 82.26

FCC 47 CFR Part 80, Limit Clause 80.211

More than 250% of the Authorised Bandwidth:

On any frequency removed from the assigned frequency by more than 250 percent of the authorized bandwidth: At least 43 plus 10log₁₀ (mean power in watts) dB.

Industry Canada RSS-182, Limit Clause 7.9.1

On any frequency removed from the carrier frequency by more than 250% of the authorized bandwidth: at least 43 + 10 log10 p(watts) dB, measured with a bandwidth of 30 kHz.

2.7.7 Test Location and Test Equipment Used

This test was carried out in EMC Chamber 5.

| Instrument | Manufacturer | Туре No | TE No | Calibration Period (months) | Calibration Due |

4 Measurement Uncertainty

For a 95% confidence level, the measurement uncertainties for defined systems are:

| Test Name | Measurement Uncertainty |
|--|--|
| Bandwidths | ± 58.05 Hz |
| Transmitter Frequency Tolerances | ± 11 Hz |
| Spurious Emissions at Antenna Terminals | ± 3.45 dB |
| Modulation Requirements | - |
| Transmitter Power | ± 3.2 dB |
| Suppression of Interference Aboard Ships | ± 3.45 dB |
| Radiated Spurious Emissions | 30 MHz to 1 GHz: ± 5.2 dB 1 GHz to 18 GHz: ± 6.3 dB |

Table 27

Measurement Uncertainty Decision Rule

Determination of conformity with the specification limits is based on the decision rule according to IEC Guide 115:2007, clause 4.4.3 and 4.5.1.
