The LTD-VL3010 is a personal mobile communication device that incorporates the latest compact radio technology, including smaller and lighter components and support for CDMA BC0 850MHz / BC1 1900MHz bands and LTE(700/850/1700/1900 MHz). This device acts as the vehicle's telematics system and connects to CDMA EVDO and LTE wireless networks and wireless modules to allow voice and data communication. Furthermore, this device can operate on land and water as well as other similar areas.

In LTE mode (CAT4), the device provides uplink speeds of up to 50 Mbps and downlink speeds of up to 150 Mbps for seamless transfer of data such as movies and video calls. The device also supports the transfer of large amounts of data.

The device communicates with the host system via a standard RS-232 or USB port, and AT commands and control commands can be used to send data. Voice calls are also possible.

	Dimensions	34 x 40 x 3.5 mm (L x W x T) (Tolerance – width, length : TBD)
	Weight	TBD g (max)
Mechanical	Interface	USB, general purpose I/O pins
	Temperature*	Operation: -20 ℃ - +70 ℃ Storage: -40 ℃ - +85 ℃
	Main chipset	MDM9628
	Memory	4Gb(NAND) / 2Gb(SDRAM)
Technology	Standard	CDMA (EVDO) - DL Speed : 3.1 Mbps - UL Speed : 1.8 Mbps LTE - DL Speed : 150 Mbps - UL Speed : 50 Mbps
	Band	CDMA BC0, BC1 LTE B2, B4, B5, B13
	Power	CDMA : Typ. 24dBm (Power Class 3) LTE : Typ. 23dBm (Power Class 3)
ETC	DC power	4 V
	Functions	Voice, data, SMS

3. Interface

3.3 USB

This device supports universal serial bus (USB) connections for high-speed data communication. The relevant hardware satisfies the USB 2.0 specifications and supports maximum communications speeds of 480 Mbps

Pin NO.	Signal Name	Pin I/O (Modem host)	Function Description
M1	USB_D+	Ю	USB Differential data line (+)
N2	USB_D-	IO	USB Differential data line (-)
К1	USB_VBUS	I	USB Power Supply

4.1 Power supply specifications

The host system provides the power supply (V_BATT)DC 4 V, 2.5 A to the device. The internal power supply module manages the power supplied to the integral circuits and maintains constant voltages. This module also controls each power block to minimize power consumption.

In particular, the PAM (power amplifier module) consumes a lot of power, so it receives a direct power supply of 4 V from the V_BATT. Therefore the V_BATT signal inputs only the supply power of the PAM, even when the absolute rating is higher. In addition, the entire power input module blocks and protects against high surges and ESD in the NAD module.

8. RFx information

The strength of the RF field produced by the wireless module or modules embedded in the TCU is well within all international RF exposure limits known at this time. Because the wireless modules embedded in the TCU emit less than the maximum amount of energy permitted in radio frequency safety standards and recommendations, the manufacturer believes these modules are safe for use.

Regardless of the power levels, care should be taken to minimize human contact during normal operation. This module should be remain more than 20 cm (8 inches) from the body when wireless devices are on and transmitting.

This transmitter must not be collocated or operated in conjunction with any other antenna or transmitter. Operation is subject to the following two conditions: (1) this module does not cause interference , (2) this module accepts any interference that may cause undesired operation.

8.1 Information for the integrator

The integrator must not provide information to the end user regarding how to install or remove this RF module in the user manual of the end product. The user manual that is provided by the integrator for end users must include the following information in a prominent location. To comply with FCC RF exposure requirements, the antenna used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be collocated or operated in conjunction with any other antenna or transmitter. The label for the end product must include FCC ID: YZP-VL3010 or A RF transmitter inside.

9. Approbation FCC

This module complies with FCC rules.

FCC : Part 22, Part 24, Part 27

Furthermore, this device complies with FCC radiation exposure limits set forth for uncontrolled environments.

This module must be installed and operated with minimum distance of 20 cm between the radiating element and the user.

This module must not be co-located with any other transmitters or antennas.

To comply with FCC regulations limiting both the maximum RF output power and human exposure to RF radiation, the maximum antenna gain including cable loss in a mobile-only exposure condition must not exceed the values listed in the following table.

Band	Frequency Range [MHz]	Maximum Antenna Gain[dBi]
CDMA(BC0)	826.40~846.6	4.5
CDMA(BC1)	1852.4~1907.6	2.0
LTE(B2)	1850~1910	2.0
LTE(B4)	1710~1755	2.0
LTE(B5)	824~849	4.5
LTE(B13)	777~787	4.5

To satisfy the FCC's exterior labeling requirements, the following text must appear on the exterior of the end product.

Contains transmitter module FCC ID: YZP-VL3010

Changes or modifications to this equipment may cause harmful interference unless the modifications are expressly approved in the instruction manual. Users may lose the authority to operate this equipment if an unauthorized change or codification is made.

Note: If this module is intended for use in a portable device, additional testing will be required to satisfy the RF exposure and SAR requirements of FCC Part 2.1093 and RSS-102.
