<p>The internal photos and schematics show a 2.4GHz antenna in the circuitry, however the block diagram does not include this piece of the equipment. Based on the operational description it is unclear whether the device transmits at 2481. The test data do not support 2481 MHz transmission. Please provide the following:</p> <ol style="list-style-type: none">1) Clarify the operational description specifically with regard to the 2481 MHz transmitter portion of this device.2) Update the Block diagram to include the 2481 MHz antenna3) If the 2481MHz portion is a transmitting element, then please provide transmitter data for certification of this portion of the equipment.	<p>The 2481 MHz antenna is a legacy trace from initial R&D, and is not connected in the SKEY-KC1 product. Please refer to Note1 on the Schematic (previously submitted SKEY-KC Schem 29Aug13).</p>
