## FCC§15.247 (i), §1.1307 (b) (1) \& §2.1091 -MAXIMUM PERMISSIBLE EXPOSURE (MPE)

## Applicable Standard

According to subpart 15.247 (i)and subpart $\S 1.1307$ (b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

Limits for Maximum Permissible Exposure (MPE) (§1.1310, §2.1091)

| (B) Limits for General Population/Uncontrolled Exposure |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Frequency Range <br> (MHz) | Electric Field <br> Strength (V/m) | Magnetic Field <br> Strength (A/m) | Power Density <br> $\left(\mathbf{m W} / \mathbf{c m}^{2}\right)$ | Averaging Time <br> (minutes) |
| $0.3-1.34$ | 614 | 1.63 | $*(100)$ | 30 |
| $1.34-30$ | $824 / \mathrm{f}$ | $2.19 / \mathrm{f}$ | $*\left(180 / \mathrm{f}^{2}\right)$ | 30 |
| $30-300$ | 27.5 | 0.073 | 0.2 | 30 |
| $300-1500$ | $/$ | $/$ | $\mathrm{f} / 1500$ | 30 |
| $1500-100,000$ | $/$ | $/$ | 1.0 | 30 |

$\mathrm{f}=$ frequency in $\mathrm{MHz} ; *=$ Plane-wave equivalent power density;
According to $\S 1.1310$ and $\S 2.1091 \mathrm{RF}$ exposure is calculated.

## Calculated Formulary:

Predication of MPE limit at a given distance
$\mathrm{S}=\mathrm{PG} / 4 \pi \mathrm{R}^{2}=$ power density (in appropriate units, e.g. $\mathrm{mW} / \mathrm{cm}^{2}$ );
$\mathrm{P}=$ power input to the antenna (in appropriate units, e.g., mW );
$\mathrm{G}=$ power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain;
$\mathrm{R}=$ distance to the center of radiation of the antenna (appropriate units, e.g., cm );

## Calculated Data (Worst case):

| Frequency <br> $(\mathbf{M H z})$ | Antenna Gain |  | Tune-up <br> Conducted Power |  | Evaluation <br> Distance <br> $(\mathbf{c m})$ | Power <br> Density <br> $\left(\mathbf{m W} / \mathbf{c m}^{2}\right)$ | MPE Limit <br> $\left(\mathbf{m W} / \mathbf{c m}^{2}\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{( d B i )}$ | (numeric) | $(\mathbf{d B m})$ | $(\mathbf{m W})$ | 0.0 | 1.0 |  |
| $2412-2462$ | 3.0 | 2.0 | 22.50 | 177.83 | 20 | 0.07 |  |

Simultaneous transmitting consideration: (referring to the DTS report, the highest MPE for 5 G band is $0.08 \mathrm{~mW} / \mathrm{cm}^{2}$ )

The ratio $=\mathrm{MPE}_{\mathrm{DTS}} / \mathrm{limit}+\mathrm{MPE}_{\mathrm{UNII}} / \mathrm{limit}=0.07+0.08=0.15<1.0$, simultaneous exposure is not required.
