## GENERAL INFORMATION

### Product Description for Equipment under Test (EUT)

The *Grandstream Networks, Inc.*'s product, model number: *GXV3662\_HDIR (FCC ID: YZZGXV3662)* or the "EUT" as referred to in this report is an *IP dome camera*, which measures approximately 15.5 cm (L) x 13.5 cm (W) x 12.1 cm (H). Input voltage: DC 12V adapter, the highest operating frequency is 296 MHz.

Adapter information: SWITCHING POWER SUPPLY

Manufacturer: Click

Model: CPS012A120100U

Input: 100-240 VAC 50/60Hz 0.4A

Output: DC 12V 1.0A

*Note: the product IP dome camera, model GXV3662\_HDIR& GXV3662\_HD are electrically identical, the difference between them is whether they have IR LED light or not, the model GXV3662\_HDIR has IR LED board on the camera lens, while the model GXV3662\_HD hasn't IR LED board on the camera lens , which was explained in the declaration letter.*

*\*All measurement and test data in this report was gathered from production sample serial number: 1011132 (Assigned by BACL, Shenzhen). The EUT was received on 2010-11-26.*

### Objective

This Type approval report is prepared on behalf of *Grandstream Networks, Inc.* in accordance with Part 2, Subpart J, Part 15, Subparts A and B of the Federal Communication Commissions rules.

The objective of the manufacturer is to determine compliance with FCC Part 15B.

### Related Submittal(s)/Grant(s)

N/A

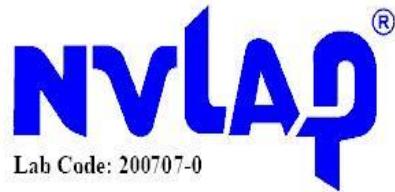

### Test Facility

The Test site used by Bay Area Compliance Laboratories Corp. (Shenzhen) to collect test data is located in the 6/F, the 3rd Phase of WanLi Industrial Building, ShiHua Road, FuTian Free Trade Zone Shenzhen, Guangdong, China.

Test site at Bay Area Compliance Laboratories Corp. (Shenzhen) has been fully described in reports submitted to the Federal Communication Commission (FCC). The details of these reports have been found to be in compliance with the requirements of Section 2.948 of the FCC Rules on December 06, 2010. The facility also complies with the radiated and AC line conducted test site criteria set forth in ANSI C63.4-2009.

The Federal Communications Commission has the reports on file and is listed under FCC Registration No.: 382179. The test site has been approved by the FCC for public use and is listed in the FCC Public Access Link (PAL) database.

Additionally, Bay Area Compliance Laboratories Corp. (Shenzhen) is a National Institute of Standards and Technology (NIST) accredited laboratory, under the National Voluntary Laboratory Accredited Program (Lab Code 200707-0).

The current scope of accreditations can be found at <http://ts.nist.gov/Standards/scopes/2007070.htm>.

## SYSTEM TEST CONFIGURATION

### Justification

The system was configured for testing in a manufacturer testing fashion.

### EUT Exercise Software

N/A

### Equipment Modifications

No modification was made to the unit tested.

### Host System Configuration List and Details

## SUMMARY OF TEST RESULTS

---

FCC Rules	Description of Test	Results
§15.107	AC Line Conducted Emissions	Compliance
§15.109	Radiated Spurious Emissions	Compliance

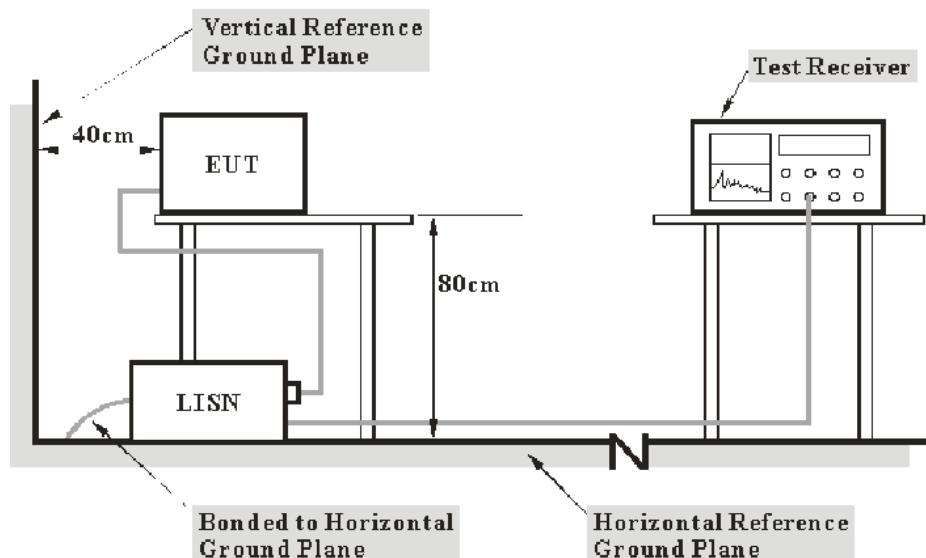

## FCC §15.107 – AC LINE CONDUCTED EMISSIONS

### Measurement Uncertainty

All measurements involve certain levels of uncertainties, especially in field of EMC. The factors contributing to uncertainties are spectrum analyzer, cable loss, and LISN.

Based on NIS 81, The Treatment of Uncertainty in EMC Measurements, the best estimate of the uncertainty of any conducted emissions measurement at Bay Area Compliance Laboratories Corp (Shenzhen) is  $\pm 2.4$  dB. ( $k=2$ , 95% level of confidence)

### EUT Setup

**Note:**

1. Support units were connected to second LISN.
2. Both of LISNs (AMN) 80 cm from EUT and at the least 80 cm from other units and other metal planes support units.

The setup of EUT is according with per ANSI C63.4-2009 measurement procedure. The specification used was with the FCC Part 15.107, Class B limits.

The spacing between the peripherals was 10 cm.

For AC/DC adapter power supply, the adapter was connected to a 120 VAC/60 Hz power source. For POE power supply, the prosafe switch with POE was connected to a 120 VAC/60 Hz power source.

### EMI Test Receiver Setup

The EMI test receiver was set to investigate the spectrum from 150 kHz to 30 MHz.

During the conducted emission test, the EMI test receiver was set with the following configurations:

<b>Frequency Range</b>	<b>IF B/W</b>
150 kHz – 30 MHz	9 kHz

## Test Equipment List and Details

Manufacturer	Description	Model	Serial Number	Calibration Date	Calibration Due Date
Rohde & Schwarz	EMI Test Receiver	ESCS30	830245/006	2010-03-03	2011-03-02
Rohde & Schwarz	L.I.S.N.	ESH2-Z5	892107/021	2010-03-09	2011-03-08
Com-Power	L.I.S.N.	LI-200	12005	N/A	N/A
Com-Power	L.I.S.N.	LI-200	12208	N/A	N/A

\* **Statement of Traceability:** Bay Area Compliance Laboratory Corp. attests that all calibrations have been performed in accordance to NVLAP requirements, traceable to the NIST.

## Test Procedure

During the conducted emission test, the adapter was connected to the outlet of the first LISN; the other support equipments were connected to seconded LISN for AC/DC adapter power supply. EUT and host PC were connected to prosafe switch with POE prosafe switch with POE was connected to the first LISN.all the other relevant support equipments were connected to the second LISN for POE power supply mode.

Maximizing procedure was performed on the six (6) highest emissions of the EUT.

All data was recorded in the Quasi-peak and average detection mode.

## Test Results Summary

According to the recorded data in following table, the EUT complied with the FCC Part 15.107 Class B, with the worst margin reading of:

### AC/DC adapter Power Supply

**4.74 dB at 0.155 MHz** in the **Line** conductor mode

### POE Power Supply

**4.76 dB at 2.880 MHz** in the **Neutral** conductor mode

## Test Data

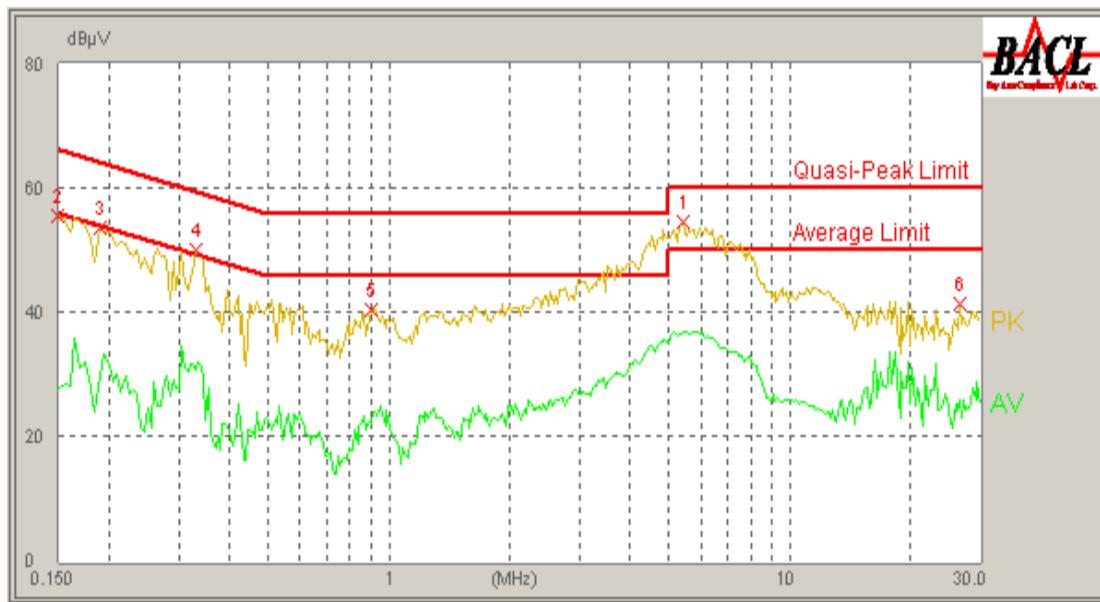

### Environmental Conditions

## FCC §15.109 - RADIATED SPURIOUS EMISSIONS

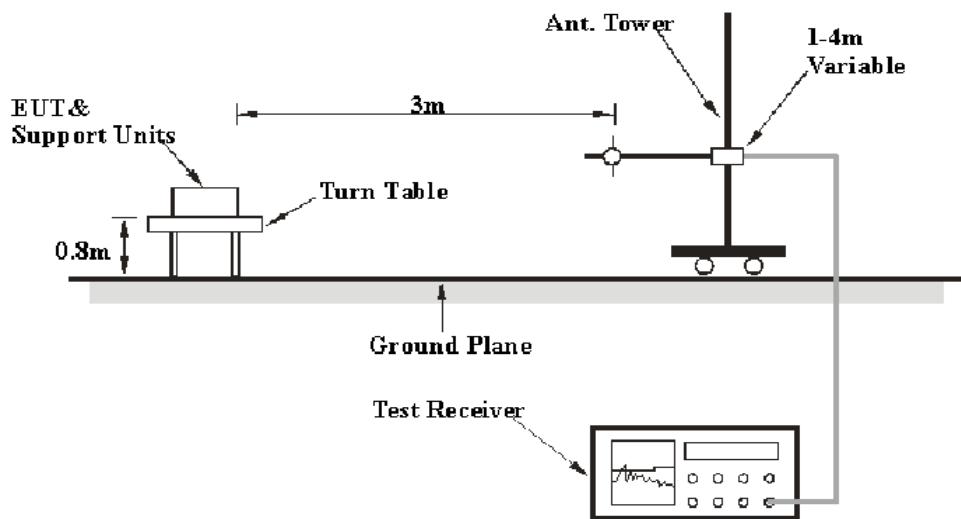

### Measurement Uncertainty

All measurements involve certain levels of uncertainties, especially in field of EMC. The factors contributing to uncertainties are spectrum analyzer, cable loss, antenna factor calibration, antenna directivity, antenna factor variation with height, antenna phase center variation, antenna factor frequency interpolation, measurement distance variation, site imperfections, mismatch (average), and system repeatability.

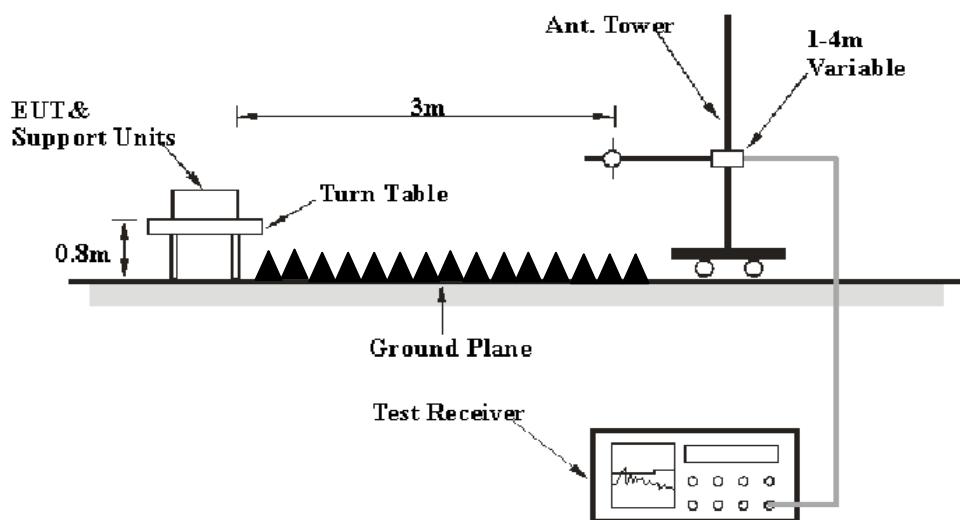

Based on NIS 81, The Treatment of Uncertainty in EMC Measurements, the best estimate of the uncertainty of a radiation emissions measurement at Bay Area Compliance Laboratories Corp. is  $\pm 4.0$  dB. ( $k=2$ , 95% level of confidence)

### EUT Setup

#### Below 1 GHz:

#### Above 1 GHz:

The radiated emission tests were performed in the 3 meters chamber B test site, using the setup accordance with the ANSI C63.4-2009. The specification used was the FCC Part 15.109 Class B limits.

The external I/O cables were draped along the test table and formed a bundle 30 to 40 cm long in the middle.

The spacing between the peripherals was 10 cm.

For AC/DC adapter power supply, the adapter was connected to a 120 VAC/60 Hz power source. For POE power supply, the prosafe switch with POE was connected to a 120 VAC/60 Hz power source.

### **EMI Test Receiver Setup**

The system was investigated from 30 MHz to 2000 MHz.

During the radiated emission test, the EMI test receiver was set with the following configurations:

<i>Frequency Range</i>	<i>RBW</i>	<i>Video B/W</i>	<i>Detector</i>
30MHz – 1000 MHz	100 kHz	300 kHz	QP
Above 1 GHz	1MHz	3 MHz	Peak
Above 1 GHz	1MHz	10 Hz	Ave

### **Test Equipment List and Details**

\* **Statement of Traceability:** Bay Area Compliance Laboratories Corp (Shenzhen). attests that all calibrations have been performed in accordance to NVLAP requirements, traceable to the NIST.

### **Test Procedure**

During the radiated emissions test, the adapter and all the other relevant support equipments were connected to the AC floor outlet for AC/DC adapter power supply mode; EUT and host PC were connected to prosafe switch with POE, all the other relevant support equipments were connected to the AC floor outlet for POE power supply mode.

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations.

All data was recorded in the Quasi-peak detection mode from 30 MHz to 1 GHz, Peak and average detection mode above 1 GHz.

## Corrected Amplitude & Margin Calculation

The Corrected Amplitude is calculated by adding the Antenna Loss and Cable Loss, and subtracting the Amplifier Gain from the Meter Reading. The basic equation is as follows:

$$\text{Corrected Amplitude} = \text{Meter Reading} + \text{Antenna Loss} + \text{Cable Loss} - \text{Amplifier Gain}$$

The “Margin” column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 7dB means the emission is 7dB below the Class B limit. The equation for margin calculation is as follows:

$$\text{Margin} = \text{Limit} - \text{Corrected Amplitude}$$

## Test Results Summary

According to the data in the following table, the EUT complied with the FCC §15.109 Class B, with the worst margin reading of:

### For AC/DC adapter power supply

**4.3 dB at 31.395500 MHz in the Vertical polarization**

### For POE power supply

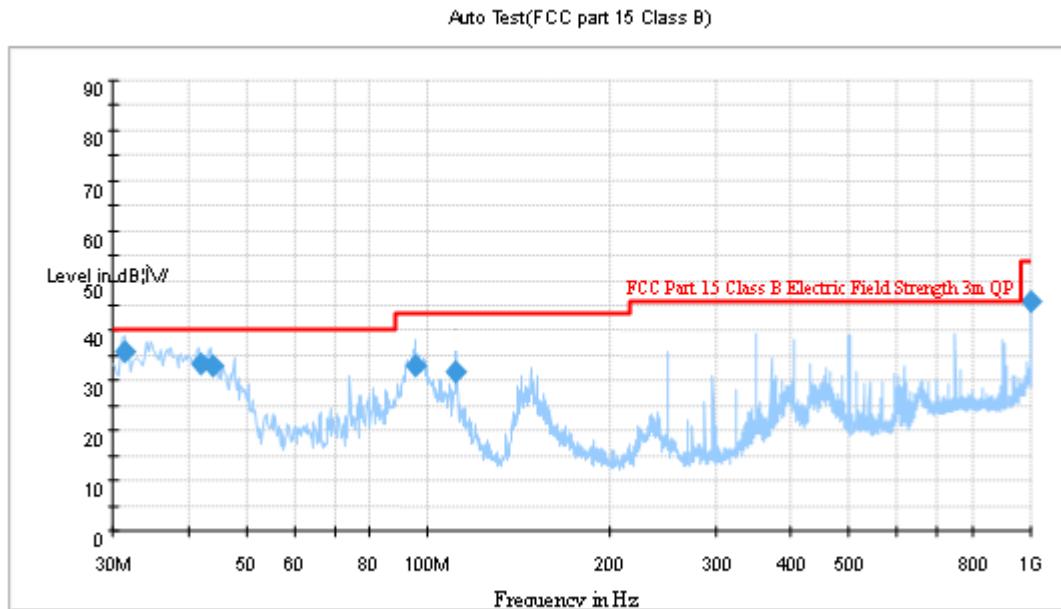

**2.0 dB at 34.649000 MHz in the Vertical polarization**

## Test Data

### Environmental Conditions

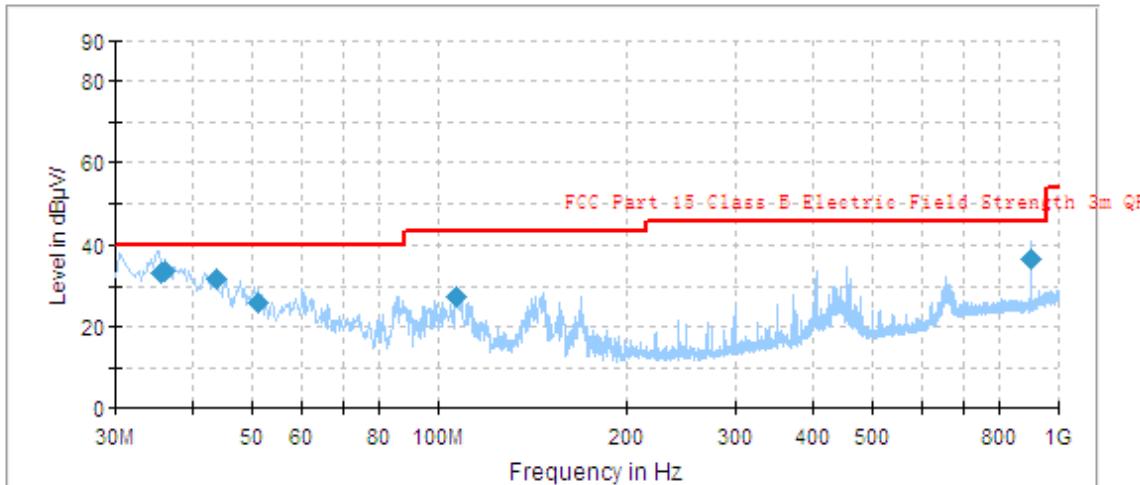

<b>Temperature:</b>	25 °C
<b>Relative Humidity:</b>	48 %
<b>ATM Pressure:</b>	100.0 kPa

*The testing was performed by Eric Lee on 2011-01-06*

## PRODUCT SIMILARITY DECLARATION LETTER

Company: Grandstream Networks, Inc.  
Address: 5F, Bldg #1, No.2 Kefa Rd., Science & Technology Park, Shenzhen, China

### Product Similarity Declaration

To: Bay Area Compliance Laboratories Corp.

We, Grandstream Networks, Inc., hereby declare that Our products IP dome Camera model name GXV3662\_HDIR is electrically identical with the Model GXV3662\_HD, GXV3662\_HDIR and GXV3662\_HD has the same PCB Layout and components except that GXV3662\_HDIR has IR LED board on camera Lens and GXV3662\_HD with out IR LED board on camera Lens.

Please contact me if you have any question.
