Circuit Descriptions

2.1 MCU-01 via commands, initialize the bluetooth module.

2.2 The bluetooth module receive the commands from remote control module, convey the data to MCU-01 after decoding.

2.3 MCU-01 got the data from bluetooth module,after the futher processing,then convey to MCU-02.

2.4 MCU-02 got the commands data from MCU-01,according to the commands to making the LED or motor works.
