

FCC ID: Z4Q-PLD-010-001

IC: 9979A-010

MN: PLD-010

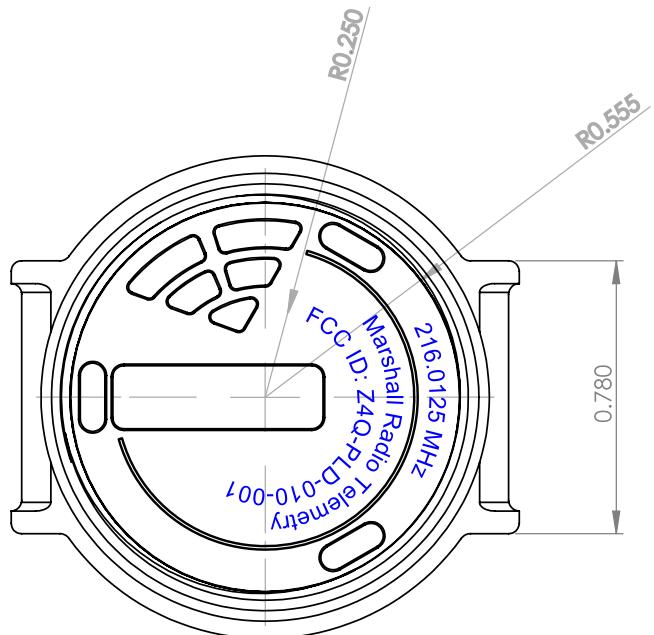

## PLD-010

### Exhibit “Label Location and Justification”

Per Title 47, § 2.926 (f), the location for the FCC ID is justified by the following factors:

1. Since one of the intended recipients of this device is autistic children, having a label that is visible after attachment is troublesome as these markings will distract the child and they will become fixated with removing the markings from the device.
2. The side of the device that contacts the user is the battery door, which is not permanently attached to the device.
3. Experience has shown that creating truly permanent markings in or on exterior plastic components which have frequent abrasive contact (people banging them around during the course of normal life) to be problematic at best.
4. Placement inside the battery compartment will allow the FCC ID to be protected from the environment (people or things), allowing it to last the device lifetime.
5. Locating the label inside the battery compartment will allow it to be seen during initial deployment of the device by the administering agency when they install the battery.
6. Every month thereafter the FCC ID will be visible when the battery is changed by the administering agency.

Per §2.1033 (c) (11), Figure 1 shows the location of the label on the device.
