TO: TIMCO

Subject: Certification submission of a device with Zigbee function and including previously « Modular Approval » certified RF modules

Product: Zibox v3

FCC ID: Z57-302111020

IC: 9970A-302111020

Dear Sir/Madam,

We, *Eileo S.A.S.*, would like to apply for certification our car-mounted device for fleet.

The equipment submitted for Certification includes a RF Zigbee function which has been tested according to relevant FCC/RSS rules.

In addition, the equipment integrates a Bluetooth/Wifi module already « modular approval » certified under FCC ID: U9R-W2CBW003 / IC: 7089A-W2CBW003.

This module is strictly identical as for the original tests.

The equipment also integrates a GSM/GPRS module already “modular approval” certified under FCC ID: QIPPH8 / IC: 7830A-PH8.

This module is strictly identical as for original tests.

The GSM/GPRS antenna would be separated by more than 20 cm from any other RF components.

The 3 RF functions (Bluetooth, Zigbee, Wifi) would never operate simultaneously (only one function at a given time).

If you have any queries, please do not hesitate to contact us.

Best Regards,

Mr. Guillaume REMOND, In-Car development Manager

A handwritten signature in black ink, appearing to read "Guillaume REMOND". The signature is fluid and cursive, with a prominent 'G' at the beginning.
