Subject: Certification submission of a device with RFID function and including previously « Modular Approval » certified RF modules

Product: Zibox v3

FCC ID: Z57-321120708

IC: 9970A-321120708

Dear Sir/Madam,

We, *Eileo S.A.S.*, would like to apply for certification our car-mounted device for fleet.

The equipment submitted for Certification includes a RFID function which has been tested according to relevant FCC/RSS rules.

In addition, the equipment integrates a Bluetooth/Wifi module already « modular approval » certified under FCC ID: U9R-W2CBW003 / IC: 7089A-W2CBW003.

This module is strictly identical as for the original tests.

The equipment also integrates a GSM/GPRS module already “modular approval” certified under FCC ID: QIPPH8-P / IC: 7830A-PH8P.

This module is strictly identical as for original tests.

The GSM/GPRS antenna would be separated by more than 20 cm from any other RF components.

The 2 RF functions (Bluetooth, Wifi) would never operate simultaneously (only one function at a given time).

If you have any queries, please do not hesitate to contact us.

Best Regards.

July 16th, 2012

Guillaume Remond, In-car development manager
