Dear Tom

As our client reply that the label height (of 10mm) as shown in the example is such that when viewed in the actual size of 10mm, the text is of a size that no human can read because each character is less than 1mm in height.  
Therefore, the compliance statement appear in the user manual and the device label bear the FCC ID.

Thanks.  
BR  
Nicolas

Dear Nicolas,

The guidance states:-

If the labelling area for the device is so small, and/or it is not practical to place the compliance statement on the device, then the statement can be placed in the user manual or product packaging.

I don't think that the area is too small because the example label I sent is 10mm by 39mm.  
See attached. A stronger justification is required other than it is hard.

Best Regards

Tom Twynam

Dear Tom,

We requested client to add the statement.  
But the Headset only have 1.6cm width, so they hard to add this.

Attached the photo for justification.  
Hope you can help.

Thanks a lot.

BR

Nicolas

Importance: High

Dear Nicolas,

Here is the grant for the dongle. I cannot waive the rule for the wording on the product without justification.

Best Regards

Tom Twynam
