

## **Test Report**

**Report No.:** MTi240305006-01E2

**Date of issue:** 2024-03-18

**Applicant:** Edifier International Limited

**Product:** Wireless Over-Ear Headphones with Active Noise

Cancellation

**Model(s):** EDF200163

FCC ID: Z9G-EDF236

Shenzhen Microtest Co., Ltd.

http://www.mtitest.com

## Instructions

- 1. This test report shall not be partially reproduced without the written consent of the laboratory.
- 2. The test results in this test report are only responsible for the samples submitted
- 3. This test report is invalid without the seal and signature of the laboratory.
- 4. This test report is invalid if transferred, altered, or tampered with in any form without authorization.
- 5. Any objection to this test report shall be submitted to the laboratory within 15 days from the date of receipt of the report.

## 1 General Description

#### 1.1 Description of the EUT

| Product name:              | Wireless Over-Ear Headphones with Active Noise Cancellation |
|----------------------------|---|
| Model name:                | EDF200163   |
| Series Model(s):           | N/A   |
| Model difference:          | N/A   |
| Electrical rating:         | Input: 5V = 1A<br>Battery: 3.7V DC 670mAh                   |
| Accessories:               | USB-A to USB-C cable 1.2m                                   |
| Hardware version:          | V1.0  |
| Software version:          | V1.0  |
| Test sample(s) number:     | MTi240305006-01S1001  |
| RF specification           |   |
| Bluetooth version:         | V5.4  |
| Operating frequency range: | 2402MHz to 2480MHz  |
| Channel number:            | 40  |
| Modulation type:           | GFSK  |
| Antenna(s) type:           | PCB Antenna   |
| Antenna(s) gain:           | 0.23 dBi  |

#### 1.2 Description of test modes

| No.   | Emission test modes |
|-------|---------------------|
| Mode1 | TX mode (GFSK-1M)   |
| Mode2 | TX mode(GFSK-2M)    |

#### 1.2.1 Operation channel list

| Channel | Frequency<br>(MHz) | Channel | Frequency<br>(MHz) | Channel | Frequency<br>(MHz) | Channel | Frequency<br>(MHz) |
|---------|--------------------|---------|--------------------|---------|--------------------|---------|--------------------|
| 0       | 2402               | 10      | 2422               | 20      | 2442               | 30      | 2462               |
| 1       | 2404               | 11      | 2424               | 21      | 2444               | 31      | 2464               |
| 2       | 2406               | 12      | 2426               | 22      | 2446               | 32      | 2466               |
| 3       | 2408               | 13      | 2428               | 23      | 2448               | 33      | 2468               |
| 4       | 2410               | 14      | 2430               | 24      | 2450               | 34      | 2470               |
| 5       | 2412               | 15      | 2432               | 25      | 2452               | 35      | 2472               |
| 6       | 2414               | 16      | 2434               | 26      | 2454               | 36      | 2474               |
| 7       | 2416               | 17      | 2436               | 27      | 2456               | 37      | 2476               |
| 8       | 2418               | 18      | 2438               | 28      | 2458               | 38      | 2478               |
| 9       | 2420               | 19      | 2440               | 29      | 2460               | 39      | 2480               |

Address: 101, No. 7, Zone 2, Xinxing Industrial Park, Fuhai Avenue, Xinhe Community, Fuhai Street, Bao'an District, Shenzhen, Guangdong, China Tel: (86-755)88850135 Fax: (86-755) 88850136 Web: www.mtitest.com E-mail: mti@51mti.com

**Test Channel List** 

Operation Band: 2400-2483.5 MHz

| Bandwidth Lowest Channel (LCH) |       | Middle Channel (MCH) | Highest Channel (HCH) |
|--------------------------------|-------|----------------------|-----------------------|
| (MHz)                          | (MHz) | (MHz)                | (MHz)                 |
| 2                              | 2402  | 2440                 | 2480                  |

Note: The test software provided by manufacturer is used to control EUT for working in engineering mode, that enables selectable channel, and capable of continuous transmitting mode.

#### **Test Software: Non Signaling Test Tool**

For power setting, refer to below table.

| Mode | 2402MHz | 2440MHz | 2480MHz |
|------|---------|---------|---------|
| 1M   | default | default | default |
| 2M   | default | default | default |

1.3 Environmental Conditions

During the measurement the environmental conditions were within the listed ranges:

| Temperature:          | 15°C ~ 35°C      |
|-----------------------|------------------|
| Humidity:             | 20% RH ~ 75% RH  |
| Atmospheric pressure: | 98 kPa ~ 101 kPa |

#### 1.4 Description of support units

| Support equipment list |              |      |    |  |  |  |  |
|------------------------|--------------|------|----|--|--|--|--|
| Description            | Manufacturer |      |    |  |  |  |  |
| 1                      | 1            | 1    | 1  |  |  |  |  |
| Support cable list     |              |      |    |  |  |  |  |
| Description            | Length (m)   | From | То |  |  |  |  |
| /                      | 1            | 1    | 1  |  |  |  |  |

#### 1.5 Measurement uncertainty

| Measurement                              | Uncertainty |
|--|-------------|
| Occupied channel bandwidth               | ±3 %        |
| RF output power, conducted               | ±1 dB       |
| Power Spectral Density, conducted        | ±1 dB       |
| Unwanted Emissions, conducted            | ±1 dB       |
| Radiated spurious emissions (above 1GHz) | ±5.3dB      |
| Radiated spurious emissions (9kHz~30MHz) | ±4.3dB      |
| Radiated spurious emissions (30MHz~1GHz) | ±4.7dB      |
| Temperature                              | ±1 °C       |
| Humidity                                 | ± 5 %       |

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

## 2 Summary of Test Result

| No. | Item  | Standard           | Requirement                         | Result |
|-----|---|--------------------|-------------------------------------|--------|
| 1   | Antenna requirement                                       | 47 CFR Part 15.247 | 47 CFR 15.203                       | Pass   |
| 2   | Occupied Bandwidth  | 47 CFR Part 15.247 | 47 CFR 15.247(a)(2)                 | Pass   |
| 3   | Maximum Conducted Output Power                            | 47 CFR Part 15.247 | 47 CFR 15.247(b)(3)                 | Pass   |
| 4   | Power Spectral Density                                    | 47 CFR Part 15.247 | 47 CFR 15.247(e)                    | Pass   |
| 5   | RF conducted spurious emissions and band edge measurement | 47 CFR Part 15.247 | 47 CFR 15.247(d),<br>15.209, 15.205 | Pass   |
| 6   | Band edge emissions (Radiated)                            | 47 CFR Part 15.247 | 47 CFR 15.247(d),<br>15.209, 15.205 | Pass   |
| 7   | Radiated emissions (below 1GHz)                           | 47 CFR Part 15.247 | 47 CFR 15.247(d),<br>15.209, 15.205 | Pass   |
| 8   | Radiated emissions (above 1GHz)                           | 47 CFR Part 15.247 | 47 CFR 15.247(d),<br>15.209, 15.205 | Pass   |

Note: Since the EUT cannot be operating while charging, therefore AC power line conducted emissions test is not required.

#### 3 Test Facilities and accreditations

#### 3.1 Test laboratory

| Test laboratory:       | Shenzhen Microtest Co., Ltd.   |

## 5 Evaluation Results (Evaluation)

#### 5.1 Antenna requirement

| Test Requirement: | Refer to 47 CFR Part 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. |
|-------------------|---|
|-------------------|---|

#### 5.1.1 Conclusion:

The antenna of the EUT is permanently attached.
The EUT complies with the requirement of FCC PART 15.203.

## 6 Radio Spectrum Matter Test Results (RF)

#### 6.1 Occupied Bandwidth

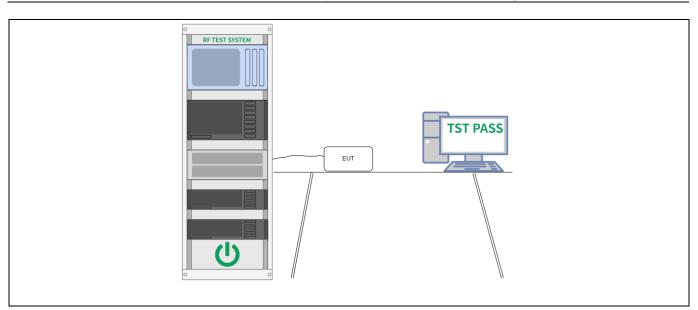

| Test Requirement: | 47 CFR 15.247(a)(2)   |
|-------------------|---|
| Test Limit:       | Refer to 47 CFR 15.247(a)(2), Systems using digital modulation techniques may operate in the 902-928 MHz, and 2400-2483.5 MHz bands. The minimum 6 dB bandwidth shall be at least 500 kHz.  |
| Test Method:      | ANSI C63.10-2020, section 11.8<br>KDB 558074 D01 15.247 Meas Guidance v05r02  |
| Procedure:        | 11.8.1 Option 1 The steps for the first option are as follows: a) Set RBW = shall be in the range of 1% to 5% of the OBW but not less than 100 kHz. b) Set the VBW ≥ [3 × RBW]. c) Detector = peak. d) Trace mode = max-hold. e) Sweep = No faster than coupled (auto) time. f) Allow the trace to stabilize. g) Measure the maximum width of the emission by placing two markers, one at the lowest frequency and the other at the highest frequency of the envelope of the spectral display, such that each marker is at or slightly below the "-6 dB down amplitude". If a marker is below this "-6 dB down amplitude" value, then it shall be as close as possible to this value.  11.8.2 Option 2 The automatic bandwidth measurement capability of an instrument may be employed using the X dB bandwidth mode with X set to 6 dB, if the functionality described in 11.8.1 (i.e., RBW = 100 kHz, VBW ≥ 3 × RBW, and peak detector with maximum hold) is implemented by the instrumentation function. When using this capability, care shall be taken so that the bandwidth measurement is not influenced by any intermediate power nulls in the fundamental emission that might be ≥ 6 dB. |

#### 6.1.1 E.U.T. Operation:

| Operating Environment: |   |      |           |  |  |  |  |  |  |
|------------------------|---|------|-----------|--|--|--|--|--|--|
| Temperature:           | Temperature: 16.3 °C Humidity: 51.9 % Atmospheric Pressure: 100 kPa |      |           |  |  |  |  |  |  |

6.1.3 Test Data:

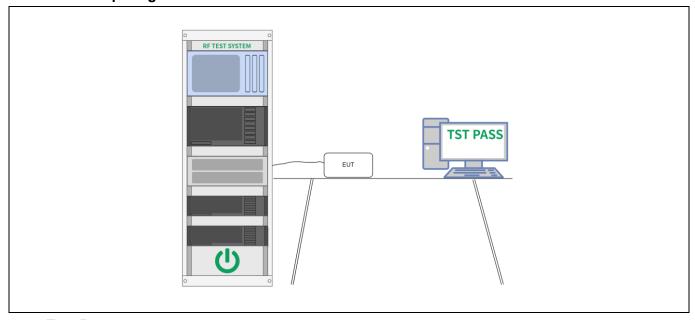

#### 6.2 Maximum Conducted Output Power

| Test Requirement: | 47 CFR 15.247(b)(3)  |
|-------------------|--|
| Test Limit:       | Refer to 47 CFR 15.247(b)(3), For systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands: 1 Watt. As an alternative to a peak power measurement, compliance with the one Watt limit can be based on a measurement of the maximum conducted output power. Maximum Conducted Output Power is defined as the total transmit power delivered to all antennas and antenna elements averaged across all symbols in the signaling alphabet when the transmitter is operating at its maximum power control level. Power must be summed across all antennas and antenna elements. The average must not include any time intervals during which the transmitter is off or is transmitting at a reduced power level. If multiple modes of operation are possible (e.g., alternative modulation methods), the maximum conducted output power is the highest total transmit power occurring in any mode. |
| Test Method:      | ANSI C63.10-2020 section 11.9.1<br>KDB 558074 D01 15.247 Meas Guidance v05r02  |
| Procedure:        | ANSI C63.10-2020, section 11.9.1 Maximum peak conducted output power   |

#### **6.2.1 E.U.T. Operation:**

#### 6.2.3 Test Data:

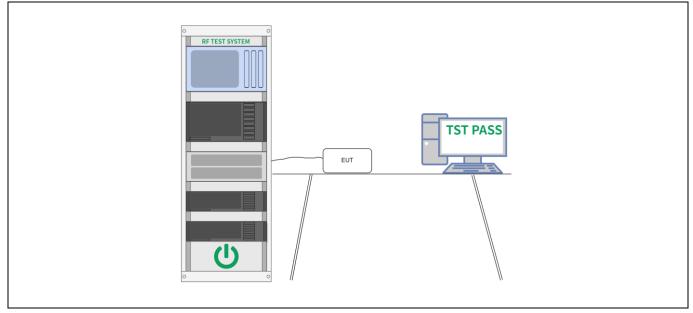

#### 6.3 Power Spectral Density

| Test Requirement: | 47 CFR 15.247(e)  |
|-------------------|---|
| Test Limit:       | Refer to 47 CFR 15.247(e), For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission. This power spectral density shall be determined in accordance with the provisions of paragraph (b) of this section. The same method of determining the conducted output power shall be used to determine the power spectral density. |
| Test Method:      | ANSI C63.10-2020, section 11.10<br>KDB 558074 D01 15.247 Meas Guidance v05r02   |
| Procedure:        | ANSI C63.10-2020, section 11.10, Maximum power spectral density level in the fundamental emission   |

#### 6.3.1 E.U.T. Operation:

| Operating Environment:        |   |  |  |  |  |  |  |  |  |
|-------------------------------|---|--|--|--|--|--|--|--|--|
| Temperature:                  | Temperature: 16.3 °C Humidity: 51.9 % Atmospheric Pressure: 100 kPa |  |  |  |  |  |  |  |  |

#### 6.4 RF conducted spurious emissions and band edge measurement

| Test Requirement: | 47 CFR 15.247(d), 15.209, 15.205  |
|-------------------|---|
| Test Limit:       | Refer to 47 CFR 15.247(d), In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in § 15.209(a) is not required. |
| Test Method:      | ANSI C63.10-2020 section 11.11<br>KDB 558074 D01 15.247 Meas Guidance v05r02  |
| Procedure:        | ANSI C63.10-2020<br>Section 11.11.1, Section 11.11.2, Section 11.11.3   |

#### 6.4.1 E.U.T. Operation:

| Operating Environment:        |   |  |  |  |  |  |  |  |
|-------------------------------|---|--|--|--|--|--|--|--|
| Temperature:                  | Temperature: 16.3 °C Humidity: 51.9 % Atmospheric Pressure: 100 kPa |  |  |  |  |  |  |  |

| Final test mode | ):       |      |           | re-test mode w<br>ded in the repo | rere tested, only the data ort | of the worst mode |

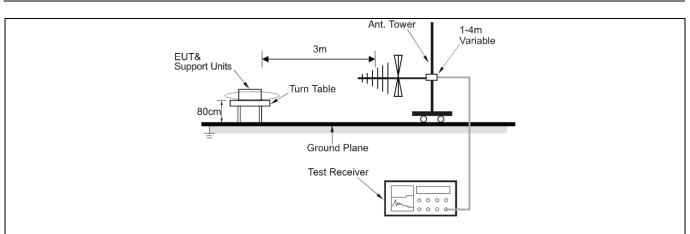

#### Note:

The amplitude of spurious emissions which are attenuated more than 20 dB below the limits are not reported.

All modes of operation of the EUT were investigated, and only the worst-case results are reported. There were no emissions found below 30MHz within 20dB of the limit.

#### **Test Graphs**

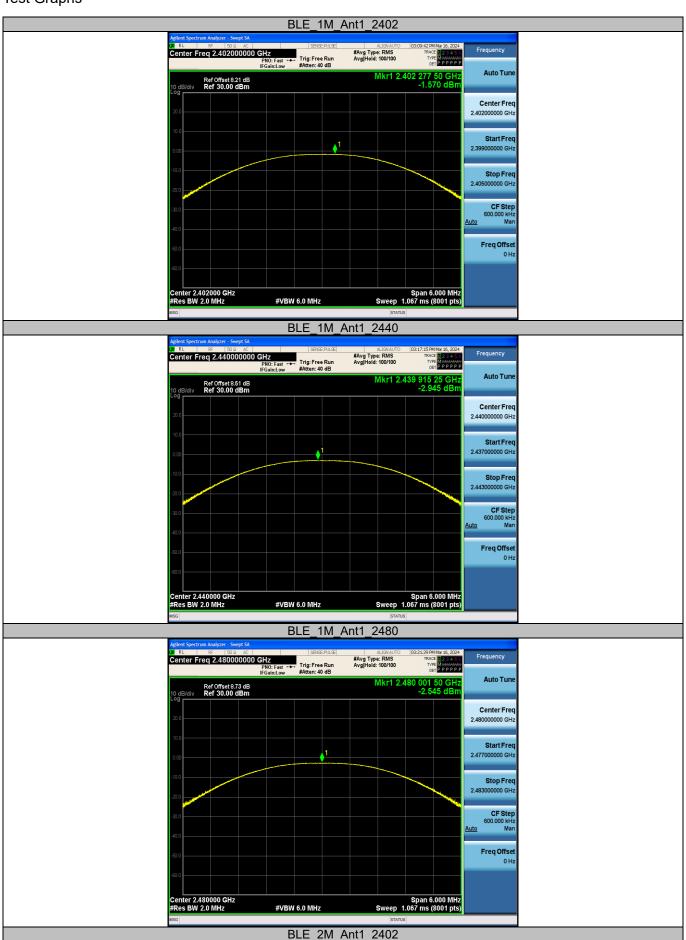

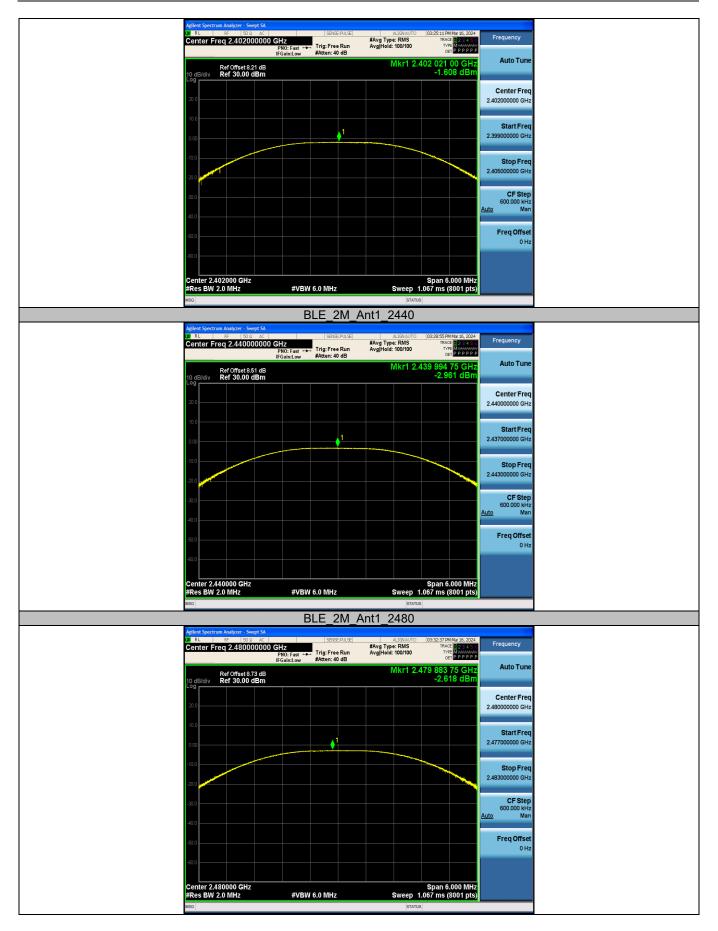

## Appendix B: Maximum conducted output power

### Test Result-Peak

| Test Mode | Antenna | Frequency<br>[MHz] | Conducted Peak Power [dBm] | Limit<br>[dBm] | Verdict |
|-----------|---------|--------------------|----------------------------|----------------|---------|
| BLE_1M    | Ant1    | 2402               | -1.57                      | ≤30            | PASS    |
|           |         | 2440               | -2.95                      | ≤30            | PASS    |
|           |         | 2480               | -2.55                      | ≤30            | PASS    |
| BLE_2M    | Ant1    | 2402               | -1.61                      | ≤30            | PASS    |
|           |         | 2440               | -2.96                      | ≤30            | PASS    |
|           |         | 2480               | -2.62                      | ≤30            | PASS    |

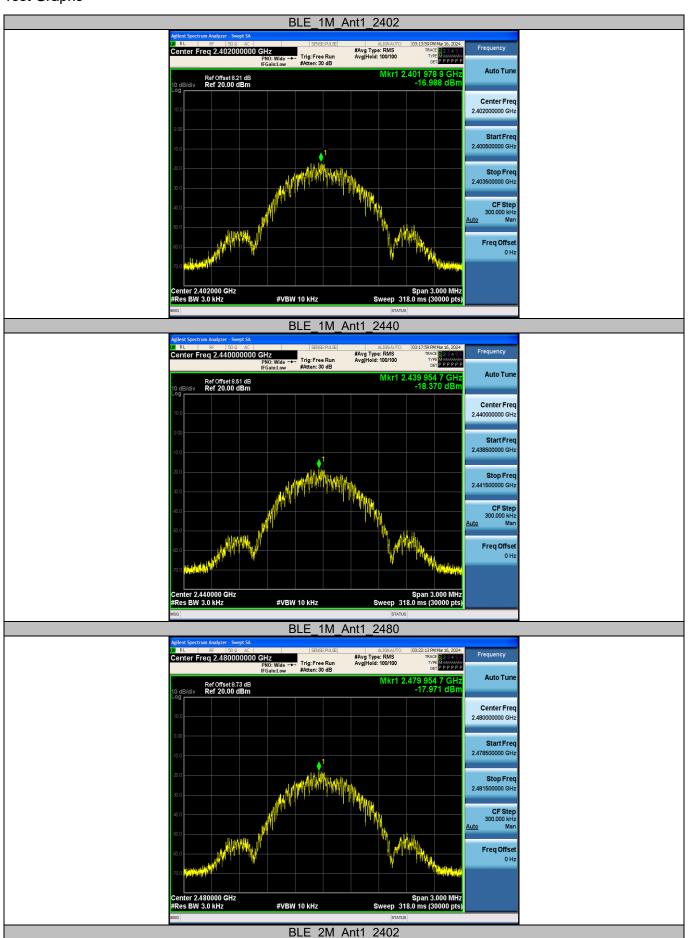

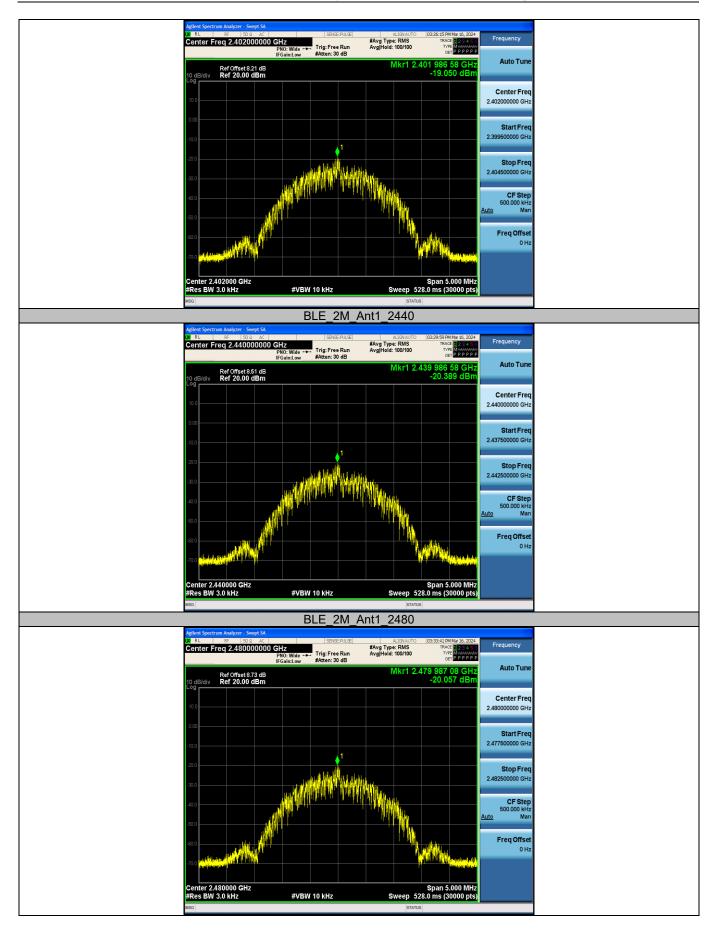

## Appendix C: Maximum power spectral density

### Test Result

| Test Mode | Antenna | Frequency<br>[MHz] | Result<br>[dBm/3kHz] | Limit<br>[dBm/3kHz] | Verdict |
|-----------|---------|--------------------|----------------------|---------------------|---------|
| BLE_1M    | Ant1    | 2402               | -16.99               | ≤8.00               | PASS    |
|           |         | 2440               | -18.37               | ≤8.00               | PASS    |
|           |         | 2480               | -17.97               | ≤8.00               | PASS    |
| BLE_2M    | Ant1    | 2402               | -19.05               | ≤8.00               | PASS    |
|           |         | 2440               | -20.39               | ≤8.00               | PASS    |
|           |         | 2480               | -20.06               | ≤8.00               | PASS    |

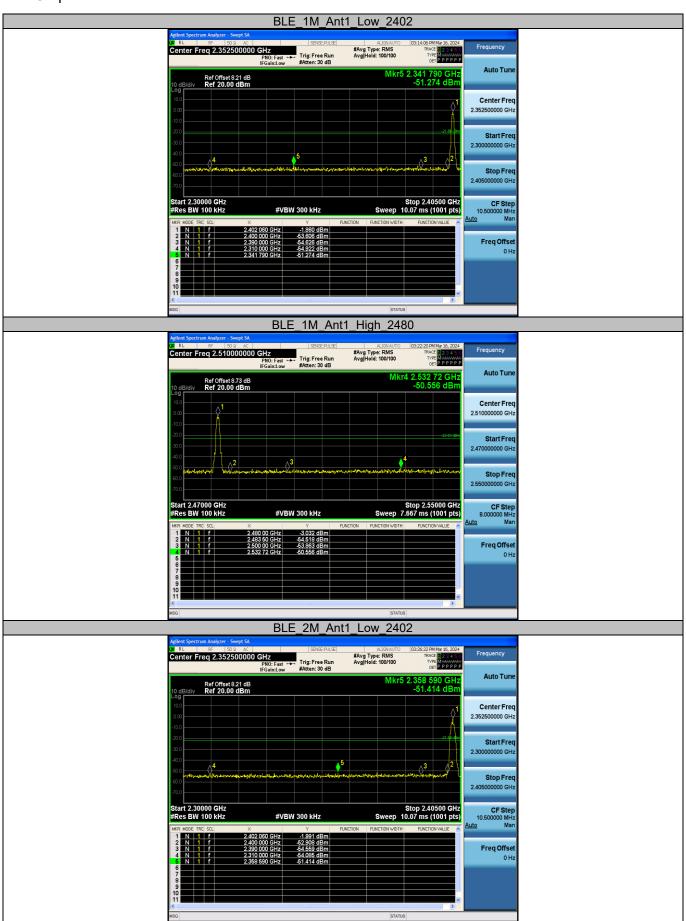

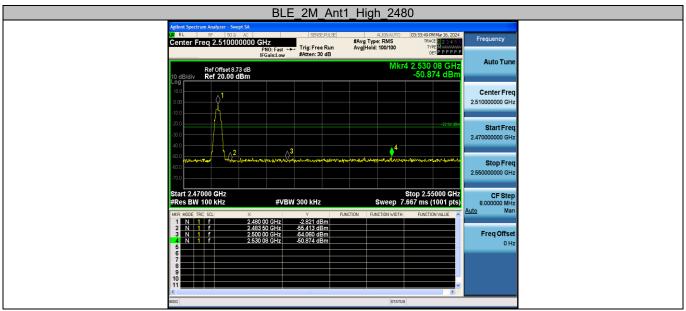

### Appendix D: Band edge measurements

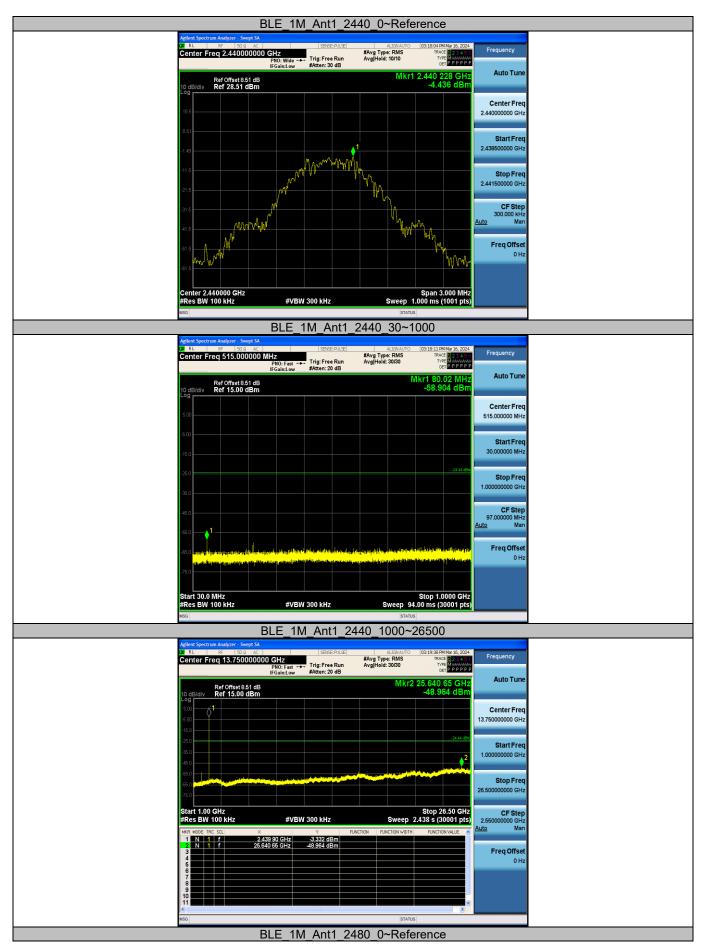

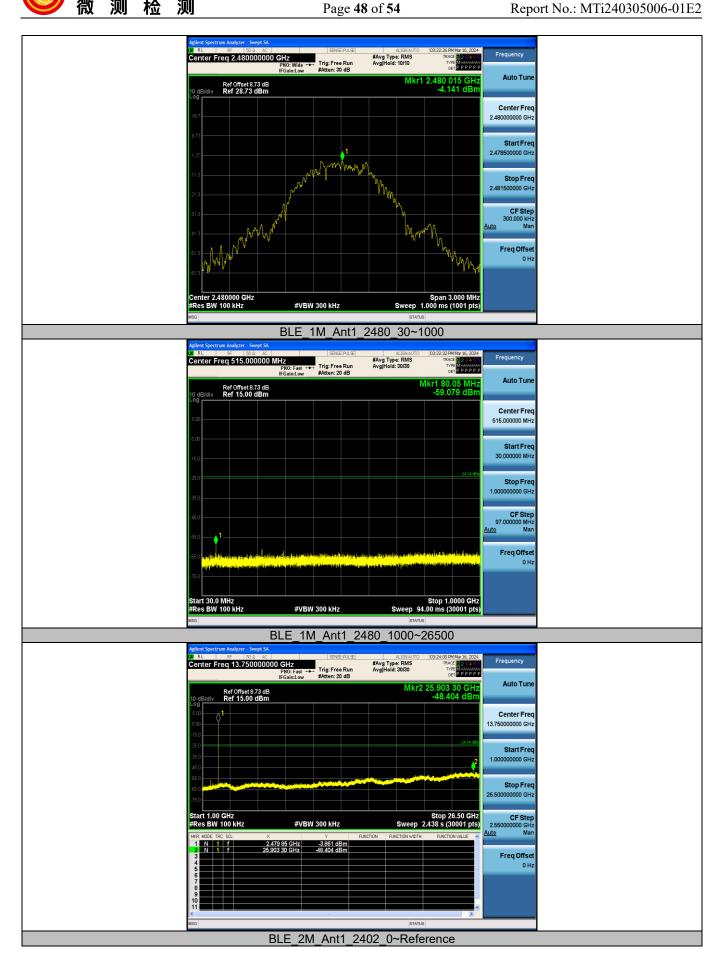

## **Appendix E: Conducted Spurious Emission**

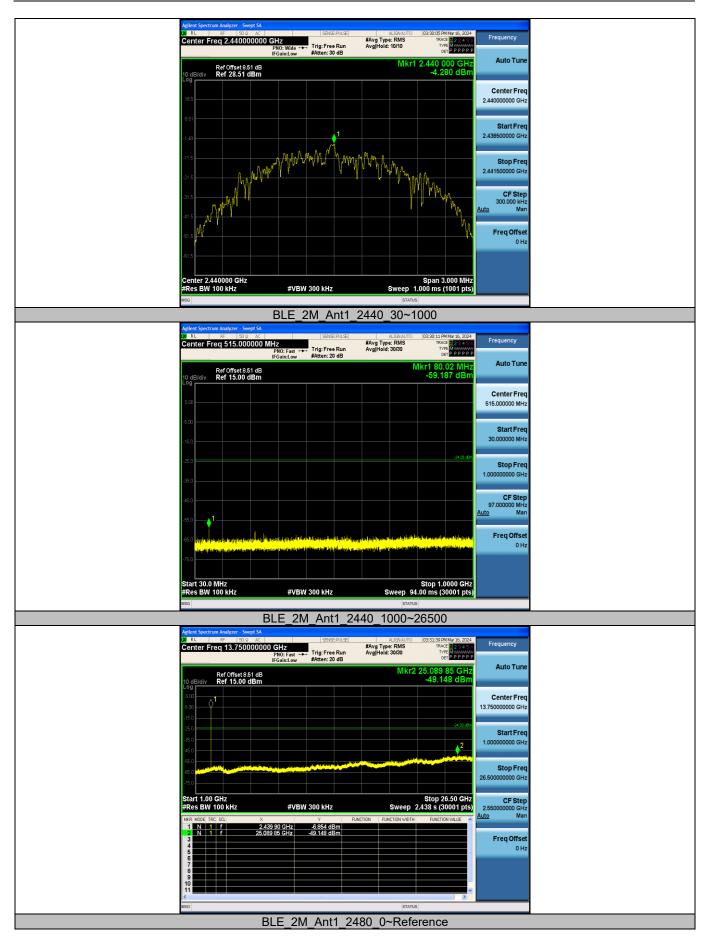

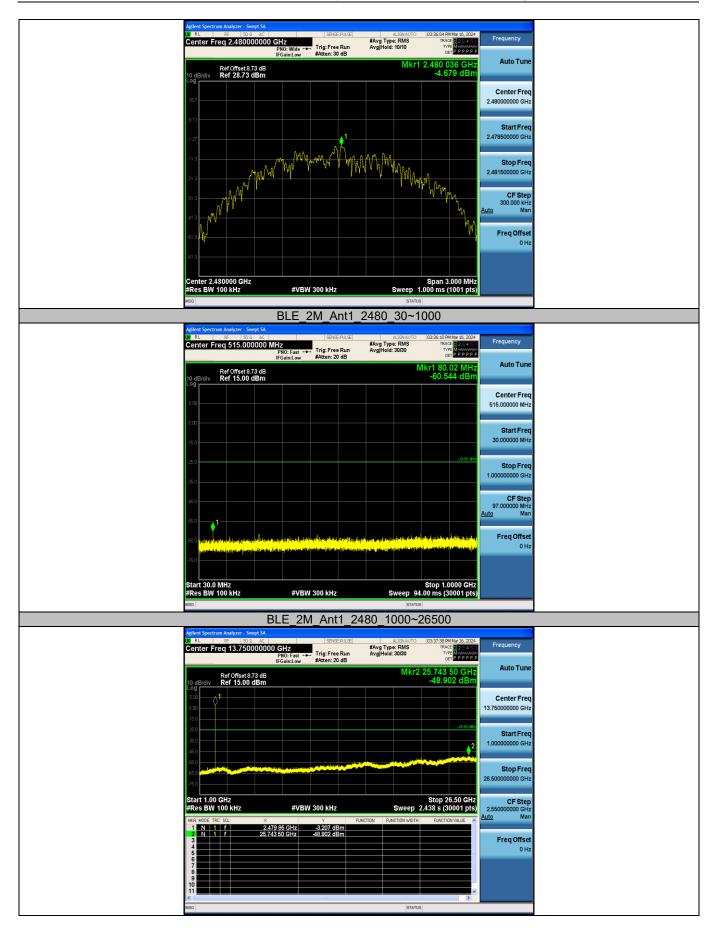

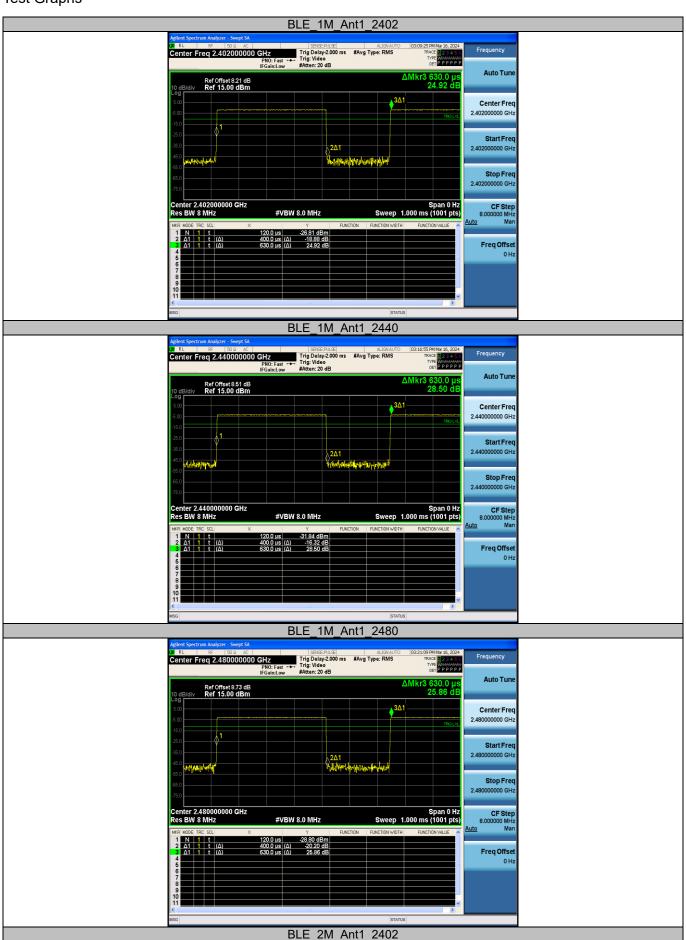

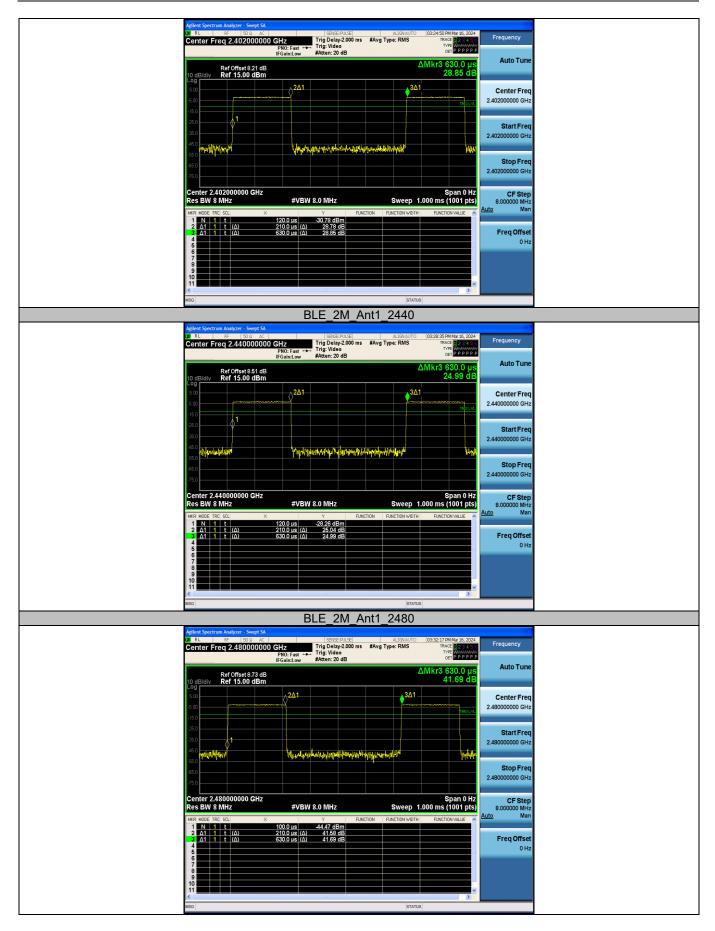

# **Appendix F: Duty Cycle**

### Test Result

| Test Mode | Antenna | Frequency | ON Time | Period | Duty Cycle | Duty Cycle |
|-----------|---------|-----------|---------|--------|------------|------------|
|           |         | [MHz]     | [ms]    | [ms]   | [%]        | Factor[dB] |
| BLE_1M    | Ant1    | 2402      | 0.40    | 0.63   | 63.49      | 1.97       |
|           |         | 2440      | 0.40    | 0.63   | 63.49      | 1.97       |
|           |         | 2480      | 0.40    | 0.63   | 63.49      | 1.97       |
| BLE_2M    | Ant1    | 2402      | 0.21    | 0.63   | 33.33      | 4.77       |
|           |         | 2440      | 0.21    | 0.63   | 33.33      | 4.77       |
|           |         | 2480      | 0.21    | 0.63   | 33.33      | 4.77       |
