Note: Frequency stability requested in RSS GEN Section 8.1.1 has been complied since the result of band edge can demonstrate.

#### **Declaration of EUT Family Grouping:**

None.

Report No.: HKEM211100116103 Page: 4 of 28

#### Abbreviation:

- Tx: In this whole report Tx (or tx) means Transmitter.
- Rx: In this whole report Rx (or rx) means Receiver.
- RF: In this whole report RF means Radiated Frequency.
- CH: In this whole report CH means channel.
- Volt: In this whole report Volt means Voltage.
- Temp: In this whole report Temp means Temperature.
- Humid: In this whole report Humid means humidity.
- Press: In this whole report Press means Pressure.
- N/A: In this whole report not application.

# 4 General Information

### 4.1 Details of E.U.T.

| Power supply:        | DC 3.0 V ('AA' size battery x 2)   |
|----------------------|--|
| Test voltage:        | DC 3.0 V   |
| Cable:               | N/A  |
| Antenna Gain:        | -1dBi  |
| Antenna Type:        | Ceramic Chip Antenna   |
| Modulation Type:     | GFSK   |
| Number of Channels:  | 1  |
| Operation Frequency: | 917MHz   |
| Series no.:          | A1   |
| Hardware Version:    | Rev.A  |
| Software Version:    | V1.01  |
|                      | Remark: Power level setting was not adjustable and fixed default through SW Version. |

EUT channels and frequencies list:

| Channel | Frequency<br>(MHz) |
|---------|--------------------|
| 1       | 917                |

Test frequencies is 917MHz.

#### 4.2 Description of Support Units

The EUT has been tested as an independent unit.

#### 4.3 Measurement Uncertainty

RF

| No. | ltem                             | Measurement Uncertainty   |
|-----|----------------------------------|---------------------------|
| 1   | Radio Frequency                  | ± 7.25 x 10 <sup>-8</sup> |
| 2   | Duty cycle                       | ± 0.37%                   |
| 3   | Occupied Bandwidth               | ± 3%                      |
| 4   | RF conducted power (30MHz-40GHz) | 1.5dB                     |
| 5   | RF power density                 | 1.5dB                     |
| 6   | Conducted Spurious emissions     | 1.5dB                     |
|     |                                  | 4.4dB (30MHz-1GHz)        |
| 7   | RF Radiated power &              | 4.7dB (1GHz-6GHz)         |
| 1   | Radiated Spurious emission test  | 4.7dB (6GHz-18GHz)        |
|     |                                  | 5.7dB (18GHz-40GHz)       |
| 8   | Temperature test                 | ± 1°C                     |
| 9   | Humidity test                    | ± 3%                      |
| 10  | Supply voltages                  | ± 1.5%                    |
| 11  | Time                             | ± 3%                      |

#### Remark:

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors in calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report according to TR-100028-01 "Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 1" and TR-100028-02 "Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 1" and TR-100028-02 "Electromagnetic compatibility and Radio spectrum Matters (ERM);Uncertainties in the measurement of mobile radio equipment characteristics; Part 2" and is documented in the test lab quality system according to ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

#### 4.4 Test Location

All tests were performed at: SGS Hong Kong Limited Unit 2 and 3, G/F, Block A, Po Lung Centre, 11 Wang Chiu Road, Kowloon Bay, Kowloon, Hong Kong Tel: +852 2305 2570 Fax: +852 2756 4480

No tests were sub-contracted.

#### 4.5 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### HOKLAS (Lab Code: 009)

SGS Hong Kong Limited has been accepted by HKAS Executive, on the recommendation of the Accreditation Advisory Board, as a HOKLAS Accredited Laboratory, this laboratory meets the requirements of ISO/IEC 17025:2017 an it has been accredited for performing specific test as listed in the scope of accreditation within the test category of Electrical and Electronic Products.

#### • IAS Accreditation (Lab Code: TL-817)

SGS Hong Kong Limited has met the requirements of AC89, IAS Accreditation Criteria for Testing Laboratories, and has demonstrated compliance with ISO/IEC Standard 17025:2017, General requirements for the competence of testing and calibration laboratories. This organization is accredited to provide the services specified in the scope of accreditation maintained on the IAS website (www.iasonline.org).

The report must not be used by the client to claim product certification, approval, or endorsement by IAS, NIST, or any agency of the Federal Government.

#### • FCC Recognized Accredited Test Firm(CAB Registration No.: 514599)

SGS Hong Kong Limited has been accredited and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Designation Number: HK0015, Test Firm Registration Number: 514599.

#### • Industry Canada (Site Registration No.: 26103; CAB Identifier No.: HK0015)

SGS Hong Kong Limited has been recognized by Department of Innovation, Science and Economic Development (ISED) Canada as a wireless testing laboratory. The acceptance letter from the ISED is maintained in our files. CAB Identifier No: HK0015, Site Registration Number: 26103.

#### 4.6 Deviation from Standards

None

#### 4.7 Abnormalities from Standard Conditions

None

# 6 Radio Spectrum Technical Requirement

#### 6.1 Antenna Requirement

6.1.1 Test Requirement:

RSS-Gen Section 6.8; 47 CFR Part 15, Subpart C 15.203 Limit:

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### 6.1.2 Conclusion

The applicant for equipment certification, as per RSP-100, must provide a list of all antenna types that may be used with the licence-exempt transmitter, indicating the maximum permissible antenna gain (in dBi) and the required impedance for each antenna.

Licence-exempt transmitters that have received equipment certification may operate with different types of antennas. However, it is not permissible to exceed the maximum equivalent isotropically radiated power (e.i.r.p.) limits specified in the applicable standard (RSS) for the licence-exempt apparatus.

Testing shall be performed using the highest gain antenna of each combination of licence-exempt transmitter and antenna type, with the transmitter output power set at the maximum level.9 When a measurement at the antenna connector is used to determine RF output power, the effective gain of the device's antenna shall be stated, based on a measurement or on data from the antenna manufacturer.

User manuals for transmitters equipped with detachable antennas shall also contain the following notice in a conspicuous location:

This radio transmitter (identify the device by certification number) has been approved by Industry Canada to operate with the antenna types listed below with the maximum permissible gain indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Immediately following the above notice, the manufacturer shall provide a list of all antenna types approved for use with the transmitter, indicating the maximum permissible antenna gain (in dBi).

Standard Requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently

attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### EUT Antenna:

The antenna is integrated on the main PCB and no consideration of replacement. The best case gain of the antenna is -1dBi.

Photo of antenna refer to Appendix – Internal photo.

## **Ground Reference Plane**

#### 7.1.3 Measurement Procedure and Data

Mode:a;

20dB Bandwidth = 61.07kHz

#### 7.2 99% Bandwidth

| Test Requirement | RSS-Gen Section 6.7 |
|------------------|---------------------|
| Test Method:     | RSS-Gen Section 6.7 |
| Limit:           | N/A                 |

#### 7.2.1 E.U.T. Operation

Operating Environment:

Temperature: 25 °C Humidity: 50 % RH :

Test mode a:TX mode\_Keep the EUT in transmitting with modulation mode.

#### 7.2.2 Test Setup Diagram

## **Ground Reference Plane**

#### 7.2.3 Measurement Procedure and Data

Mode:a;

99% Bandwidth = 62.52kHz

### 7.3 Field Strength of the Fundamental Signal (15.249(a))

| Test Requirement      | 47 CFR Part 15, Subpart C 15.249(a) |
|-----------------------|-------------------------------------|
| Test Method:          | ANSI C63.10 (2013) Section 6.5&6.6  |
| Measurement Distance: | 3m                                  |
| Limit:                |                                     |

| Fundamental<br>frequency(MHz) | Field strength of<br>fundamental(millivolts/meter) | Field strength of<br>harmonics(microvolts/meter) |
|-------------------------------|--|--|
| 902-928                       | 50   | 500  |
| 2400-2483.5                   | 50   | 500  |
| 5725-5875                     | 50   | 500  |
| 24000-24250                   | 250  | 2500   |

Remark: The frequencies above 1000MHz are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.

For fundamental frequency in "902-928MHz", the field strength of fundamental is based on Quasi-Peak.

#### 7.3.1 E.U.T. Operation

**Operating Environment:** 

Temperature:

22.5 °C

Humidity: 51 % RH

Test mode a:TX mode\_Keep the EUT in transmitting with modulation mode.

#### 7.3.2 Test Setup Diagram

30MHz-1GHz

Above 1GHz

#### 7.3.3 Measurement Procedure and Data

a. For below 1GHz, the EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 or 10 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.

b. For above 1GHz, the EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter fully-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.

c. The EUT was set 3 or 10 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.

d. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

e. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.

f. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

g. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

h. Test the EUT in the lowest channel, the middle channel, the Highest channel.

i. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is the worst case.

j. Repeat above procedures until all frequencies measured was complete.

Remark: Level= Read Level+ Cable Loss+ Antenna Factor- Preamp Factor

#### 7.5.1 E.U.T. Operation

**Operating Environment:** 

Temperature:

Test mode

22.5 °C Humidity: 51 a:TX mode Keep the EUT in transmitting with modulation mode.

#### 7.5.2 Test Setup Diagram

% RH

÷

#### 7.5.3 Measurement Procedure and Data

For testing performed with the loop antenna, the center of the loop was positioned 1 m above the ground and positioned with its plane vertical at the specified distance from the EUT. During testing the loop was rotated about its vertical axis for maximum response at each azimuth and also investigated with the loop positioned in the horizontal plane. Only the worst position of vertical was shown in the report.

Above 1GHz

Report No.: HKEM211100116103 Page: 25 of 28

#### Radiated emission below 1GHz

Horizontal

| Frequency  | QuasiPeak | Pol. | Corr.  | Margin | Limit    | Descrit |
|------------|-----------|------|--------|--------|----------|---------|
| (MHz)      | (dBµV/m)  |      | (dB/m) | (dB)   | (dBµV/m) | Result  |
| 50.716429  | 12.7      | Н    | 14.2   | 27.3   | 40.0     | Pass    |
| 166.077143 | 13.0      | Н    | 14.3   | 30.5   | 43.5     | Pass    |
| 401.440714 | 16.6      | Н    | 17.5   | 29.4   | 46.0     | Pass    |
