# **TEST REPORT**

Applicant's Name	Buddi Limited	
Address	Talbot House 17 Church Street Rickmansworth, WD3 1DE United Kingdom	
Manufacturer's Name	Buddi Limited	
Address	Talbot House 17 Church Street Rickmansworth, WD3 1DE United Kingdom	
Product Description	CTATES TNG	
Product Name:	Smart ID Buddi Limited	
Brand Name:	Buddi Limited	
Model Name		
Series Model(s):	7630001	
Test Standards	FCC Part 15.247	
Test Procedure:	ANSI C63.10-2013	
test (EUT) is in compliance with identified in the report. This report shall not be reproduce	s been tested by CTA, the test results show that the equipment under the FCC requirements. And it is applicable only to the tested sample ced except in full, without the written approval of CTA, this document A, personal only, and shall be noted in the revision of the document.	
Date of Test		

20 Oct. 2023
20 Oct. 2023 ~ 27 Dec. 2023
27 Dec. 2023
Pass

# 2. GENERAL INFORMATION

# 2.1 GENERAL DESCRIPTION OF THE EUT

1 GENERAL DESCRIPTION		CA CTATE		
Product Name	Smart ID			
Brand Name	Buddi Limited			
Model Name	S10-BUD-A-TEEU-S	SID		
Series Model(s)	7630001	7630001		
Model Difference	The difference only in the model name.			
	The EUT is a Smart	ID CTA		
Product Description	Operation Frequency:	802.11b/g/n 20: 2412~2462 MHz		
	Modulation Type:	802.11b(DSSS):CCK,DQPSK,DBPSK 802.11g(OFDM):BPSK,QPSK,16-QAM,64-QAM 802.11n(OFDM):BPSK,QPSK,16-QAM,64-QAM		
	Bit Rate of Transmitter:	802.11b:11/5.5/2/1 Mbps 802.11g:54/48/36/24/18/12/9/6Mbps 802.11n(20MHz): 65/58.5/52/39/26/19.5/13/6.5Mbps		
	Number of	802.11b/g/n20: 11CH		
	Antenna Type:	SMD		
	Antenna Gain (dBi):	3.5 dBi		
Channel List	Please refer to the N	Please refer to the Note 3.		
Adapter	Smart ID Dock (with Input: DC 5V, 1.2A Output: DC 5V, 1.2A Charging head: Input:100-240V~, 50 Output:DC 5V 1.2A	D/60Hz, 0.3A		
Battery	Rated Voltage: 3.7V Charge Limit Voltage Capacity: 2650mAh	e: 4.2V		
Rating	Input:DC 5V 1.2A			
Hardware version number	V14.0			
Software version number	1.41.2			
Connecting I/O Port(s)	Please refer to the N	Note 1.		

#### Note:

- 1. For a more detailed features description, please refer to the manufacturer's specifications or the User Manual.
- 2. The antenna information refer the manufacturer provide report, applicable only to the tested sample identified in the report. Due to the incorrect antenna information, a series of problems such as the accuracy of the test results will be borne by the customer. CTA TESTING

# 2.2 DESCRIPTION OF THE TEST MODES

Each of these EUT operation mode(s) or test configuration mode(s) mentioned above was evaluated respectively.

Worst Mode	Description	Data Rate			
Mode 1	TX IEEE 802.11b CH1	1 Mbps			
Mode 2	TX IEEE 802.11b CH6	1 Mbps			
Mode 3	TX IEEE 802.11 b CH11	1 Mbps			
Mode 4	TX IEEE 802.11g CH1	6 Mbps			
Mode 5	TX IEEE 802.11g CH6	6 Mbps			
Mode 6	TX IEEE 802.11g CH11	6 Mbps			
Mode 7	TX IEEE 802.11n HT20 CH1	MCS 0			
Mode 8	TX IEEE 802.11n HT20 CH6	MCS 0			
Mode 9	TX IEEE 802.11n HT20 CH11	MCS 0			
lote.	GA	CTATES			

#### Note:

(1) The measurements are performed at all Bit Rate of Transmitter, the worst data was reported.

- (2) We have be tested for all avaiable U.S. voltage and frequencies(For 120V,50/60Hz
- and 240V, 50/60Hz) for which the device is capable of operation, and the worst case of 120V /60Hz is shown in the report.
- (3) The battery is fully-charged during the radited and RF conducted test.

# 3. EMC EMISSION TEST

# 3.1 CONDUCTED EMISSION MEASUREMENT

3.1.1 POWER LINE CONDUCTED EMISSION LIMITS

The radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table.

FREQUENCY (MHz)	Conducted Emissionlimit (dBuV)				
FREQUENCT (MHZ)	Quasi-peak	Average			
0.15 -0.5	66 - 56 *	56 - 46 *			
0.50 -5.0	56.00	46.00			
5.0 -30.0	60.00	50.00			

Note:

(1) The tighter limit applies at the band edges.

(2) The limit of "\*" marked band means the limitation decreases linearly with the logarithm of the frequency in the range.

### The following table is the setting of the receiver

to relieving table to the botting of				
Receiver Parameters	5		Setting	
Attenuation		GTA C'	10 dB	
Start Frequency		and the second sec	0.15 MHz	GTA CTA
Stop Frequency			30 MHz	Constant of the second se
IF Bandwidth			9 kHz	
CTATES CTATES		TESTING		
		TES		
				TESTING

# 3.1.2 TEST PROCEDURE

- a. The EUT is 0.8 m from the horizontal ground plane and 0.4 m from the vertical ground plane with EUT being connected to the power mains through a line impedance stabilization network (LISN). All other support equipments are powered from additional LISN(s). The LISN provides 50 Ohm/ 50uH of coupling impedance for the measuring instrument.
- b. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.
- c. I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.
- d. LISN is at least 80 cm from the nearest part of EUT chassis.
- e. For the actual test configuration, please refer to the related Item –EUT Test Photos.

Note: 1. Support units were connected to second LISN.

2. Both of LISNs (AMN) are 80 cm from EUT and at least 80 cm from other units and other metal planes support units.

# 3.1.4EUT OPERATING CONDITIONS

The EUT was configured for testing in a typical fashion (as a customer would normally use it). The EUT has been programmed to continuously transmit during test. This operating condition was tested and used to collect the included data.

# 3.1.5 TEST RESULT

3.1.5 TEST RESUL	Т				-51"

#### 3.2.2 TEST PROCEDURE

- a. The measuring distance at 3 m shall be used for measurements at frequency 0.009MHz up to 1GHz, and above 1GHz.
- b. The EUT was placed on the top of a rotating table 0.8 m (above 1GHz is 1.5 m) above the ground at a 3 m anechoic chamber test site. The table was rotated 360 degree to determine the position of the highest radiation.
- c. The height of the equipment shall be 0.8 m (above 1GHz is 1.5 m); the height of the test antenna shall vary between 1 m to 4 m. Horizontal and vertical polarization of the antenna are set to make the measurement.
- d. The initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and QuasiPeak detector mode will be re-measured.
- e. If the Peak Mode measured value is compliance with and lower than Quasi Peak Mode Limit, TATESTING the EUT shall be deemed to meet QP Limits and no additional QP Mode measurement was performed.
- f. For the actual test configuration, please refer to the related Item -EUT Test Photos. Note:

Both horizontal and vertical antenna polarities were tested and performed pretest to three orthogonal axis. The worst case emissions were reported. Jrs

# 3.2.3 TEST SETUP

# (B) Radiated Emission Test-Up Frequency 30MHz~1GHz

(C) Radiated Emission Test-Up Frequency Above 1GHz

3.2.4 EUT OPERATING CONDITIONS Please refer to section 3.1.4 of this report.

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor (if any) from the matter of the matte Gequation with a sample calculation is as follows:

FS = RA + AF + CL - AGWhere FS = Field Strength

FS = Field Strength CL = Cable Attenuati RA = Reading Amplit AG = Amplifier Gain	ude	ble Loss)	TATES			
AF = Antenna Factor For example						TESTING

#### Remark:

1. Factor = Antenna Factor + Cable Loss – Pre-amplifier.

2. Scan with 802.11b, 802.11g, 802.11n (HT-20) the worst case is 802.11 g.

- Emission Level = Reading + Factor
- Margin = Emission Level-Limit

3. The frequency emission of peak points that did not show above the forms are at least 20dB below

the limit, the frequency emission is mainly from the environment noise.

#### **4.3 DEVIATION FROM STANDARD** No deviation.

The EUT is connected to the Spectrum Analyzer; the RF load attached to the EUT antenna terminal TATESTING is 500hm; the path loss as the factor is calibrated to correct the reading. Make the measurement with the spectrum analyzer's resolution bandwidth (RBW) = 100 kHz. In order to make an accurate measurement, set the span greater than RBW.

**4.5 EUT OPERATION CONDITIONS** Please refer to section 3.1.4 of this report. **4.6 TEST RESULTS** 

CTA TESTING Note: The test data please refer to APPENDIX 1.

# **6.2 TEST PROCEDURE**

The automatic bandwidth measurement capability of an instrument may be employed using the X dB bandwidth mode with X set to 6 dB, if the functionality described above (i.e., RBW = 100 kHz, VBW≥3RBW, peak detector with maximum hold) is implemented by the instrumentation function. When using this capability, care shall be taken so that the bandwidth measurement is not influenced by any intermediate power nulls in the fundamental emission that might be≥6 dB.

# 7. PEAK OUTPUT POWER TEST

# 7.2 TEST PROCEDURE

One of the following procedures may be used to determine the maximum peak conducted output power of a DTS EUT.

 $RBW \ge DTS$  bandwidth

The following procedure shall be used when an instrument with a resolution bandwidth that is greater than the DTS bandwidth is available to perform the measurement:

a) Set the RBW  $\geq$  DTS bandwidth.

b) Set VBW  $\geq$  [3 × RBW].

c) Set span ≥ [3 × RBW].

d) Sweep time = auto couple.

e) Detector = peak.

f) Trace mode = max hold.

g) Allow trace to fully stabilize.

h) Use peak marker function to determine the peak amplitude level.

Integrated band power method:

CTA TESTIN The following procedure can be used when the maximum available RBW of the instrument is less than the

DTS bandwidth:

a) Set the RBW = 1 MHz.

(<sup>Solution</sup> b) Set the VBW ≥ [3 × RBW].

c) Set the span  $\geq$  [1.5 × DTS bandwidth].

d) Detector = peak.

e) Sweep time = auto couple.

f) Trace mode = max hold.

g) Allow trace to fully stabilize.

h) Use the instrument's band/channel power measurement function with the band limits set equal to the DTS bandwidth edges (for some instruments, this may require a manual override to select the peak detector). If the instrument does not have a band power function, then sum the spectrum levels (in linear power units) at intervals equal to the RBW extending across the DTS channel bandwidth.

PKPM1 Peak power meter method:

The maximum peak conducted output power may be measured using a broadband peak RF power meter. The power meter shall have a video bandwidth that is greater than or equal to the DTS bandwidth and shall use a fast-responding diode detector.

7.3 DEVIATION FROM STANDARD No deviation.

# 8. ANTENNA REQUIREMENT

# 8.1 STANDARD REQUIREMENT

15.203 requirement: For intentional device, according to 15.203: an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible partyshall be used with the device.

# 8.2 EUT ANTENNA

The EUT antenna is SMD Antenna. It comply with the standard requirement.
