Circuit Descriptions

2.1 STM8S103 via commands, initialize the bluetooth module.

2.2 The bluetooth module receive the commands from remote control module, convey the data to STM8S103 after decoding.

2.3 STM8S103 got the data from bluetooth module,after the futher processing,then convey to BLUETOOTH-MODULE32

2.4 BLUETOOTH-MODULE32got the commands data from STM8S103,according to the commands to making the LED or motor works.
