

## ZOLL Antennas

The antennas for the system consist of two printed circuit trace antennas.

They are permanently connected within the device using coax cables and U.FL connectors. The user has no access to the antennas, coax cables, or connectors.

One is  $\frac{1}{4}$  wavelength monopole at 2.45GHz. Gain is -4dBi

2412 MHz	-4.6 dBi
2442 MHz	-4.0 dBi
2472 MHz	-4.9 dBi

The other is  $\frac{1}{4}$  wavelength monopole at 5.4GHz. Gain is 2.7dBi

5180 MHz	1.6 dBi
5320 MHz	2.2 dBi
5500 MHz	2.4 dBi
5700 MHz	2.7 dBi
5825 MHz	1.4 dBi
