## FCC §1.1310 & §2.1091- MAXIMUM PERMISSIBLE EXPOSURE (MPE)

## **Applicable Standard**

According to subpart 1.1310, 2.1091 systems operating under the provisions of this section shall be operated in a manner that ensures the public is not exposed to RF energy level in excess of the communication guidelines.

| Limits for General Population/Uncontrolled Exposure |                                  |                                  |  |                             |  |  |  |
|---|----------------------------------|----------------------------------|--|-----------------------------|--|--|--|
| Frequency Range<br>(MHz)                            | Electric Field<br>Strength (V/m) | Magnetic Field<br>Strength (A/m) | Power Density<br>(mW/cm <sup>2</sup> ) | Averaging Time<br>(minutes) |  |  |  |
| 0.3-1.34  | 614                              | 1.63                             | *(100)                                 | 30                          |  |  |  |
| 1.34-30   | 824/f                            | 2.19/f                           | *(180/f <sup>2</sup> )                 | 30                          |  |  |  |
| 30-300  | 27.5                             | 0.073                            | 0.2                                    | 30                          |  |  |  |
| 300-1500  | /                                |                                  | f/1500                                 | 30                          |  |  |  |
| 1500-100,000  | /                                |                                  | 1.0                                    | 30                          |  |  |  |

f = frequency in MHz; \* = Plane-wave equivalent power density

## **Calculated Formulary**:

Predication of MPE limit at a given distance

- $S = PG/4 \pi R^2 =$  power density (in appropriate units, e.g. mW/cm<sup>2</sup>);
- P = power input to the antenna (in appropriate units, e.g., mW);
- G = power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain;
- R = distance to the center of radiation of the antenna (appropriate units, e.g., cm);

For simultaneously transmit system, the calculated power density should comply with:

$$\sum_{i} \frac{S_i}{S_{Limit,i}} \leq 1$$

## **Calculated Data**:

| Mode             | Frequency<br>Range<br>(MHz) | Antenna Gain |           | Tune-up<br>Conducted<br>Power |        | Evaluation<br>Distance | Power<br>Density | MPE<br>Limit          | MPE<br>Ratio |
|------------------|-----------------------------|--------------|-----------|-------------------------------|--------|------------------------|------------------|-----------------------|--------------|
|                  |                             | (dBi)        | (numeric) | (dBm)                         | (mW)   | (cm)                   | $(mW/cm^2)$      | (mW/cm <sup>2</sup> ) |              |
| Wi-Fi            | 2412~2462                   | -2.00        | 0.63      | 16                            | 39.81  | 20                     | 0.0050           | 1.00                  | 0.0050       |

| EGPRS<br>850     | 824~849                     | 2.00         | 1.58      | 21                            | 125.89 | 20                     | 0.0397           | 0.55                  | 0.0722       |
| WCDMA<br>Band V  | 824~849                     | 2.00         | 1.58      | 23                            | 199.53 | 20                     | 0.0629           | 0.55                  | 0.1144       |
| GPRS<br>1900     | 1850~1910                   | 2.00         | 1.58      | 24                            | 251.19 | 20                     | 0.0792           | 1.00                  | 0.0792       |
| EGPRS<br>1900    | 1850~1910                   | 2.00         | 1.58      | 19                            | 79.43  | 20                     | 0.0250           | 1.00                  | 0.0250       |
| WCDMA<br>Band II | 1850~1910                   | 2.00         | 1.58      | 23                            | 199.53 | 20                     | 0.0629           | 1.00                  | 0.0629       |
| WCDMA<br>Band IV | 1710~1755                   | 2.00         | 1.58      | 23                            | 199.53 | 20                     | 0.0629           | 1.00                  | 0.0629       |

Note:

(1) For GPRS/EGPRS Mode, the time based average power is relevant, the difference in between depends on the duty cycle of the TDMA signal.

| Number of Time slot                                  | 1     | 2     | 3        | 4     |
|--|-------|-------|----------|-------|
| Duty Cycle   | 1:8   | 1:4   | 1:2.66   | 1:2   |
| Time based Ave. power compared to slotted Ave. power | -9 dB | -6 dB | -4.25 dB | -3 dB |

(2) **Wi-Fi** and **GPRS or WCDMA** can transmit simultaneously; the worst condition is Wi-Fi & GPRS 850, as below:

$$\sum_{i} \frac{S_i}{S_{Limit,i}} \le 1 = 0.0050 + 0.2873 = 0.2923 < 1.0$$

**Result:** The device meet FCC MPE at 20 cm distance.
