| Applicable Standards | Test Results |
|----------------------|--------------|
| ANSI C63.19-2007 | Pass |

UL CCS tested the above equipment in accordance with the requirements set forth in the above standards. All indications of Pass/Fail in this report are opinions expressed by UL CCS based on interpretations and/or observations of test results. Measurement Uncertainties were not taken into account and are published for informational purposes only. The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

Note: The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein. This document may not be altered or revised in any way unless done so by UL CCS and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by UL CCS will constitute fraud and shall nullify the document. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, any agency of the Federal Government, or any agency of any government (NIST Handbook 150, Annex A). This report is written to support regulatory compliance of the applicable standards stated above.

2. Test Methodology

The tests documented in this report were performed in accordance with ANSI C63.19-2007 Methods of Measurement of Compatibility between Wireless Communications Devices and Hearing Aids and FCC KDB 285076 D01 HAC Guidance v03.

3. Facilities and Accreditation

The test sites and measurement facilities used to collect data are located at 47173 Benicia Street, Fremont, California, USA.

UL CCS is accredited by NVLAP, Laboratory Code 200065-0. The full scope of accreditation can be viewed at <http://www.ccsemc.com>.

4. Calibration and Uncertainty

4.1. Measuring Instrument Calibration

The measuring equipment utilized to perform the tests documented in this report has been calibrated in accordance with the manufacturer's recommendations, and is traceable to recognized national standards.

6. System Specifications

E-field and H-field measurements are performed using the DASY5 automated dosimetric assessment system. The DASY5 is made by Schmid & Partner Engineering AG (SPEAG) in Zurich, Switzerland.

The DASY5 HAC Extension consists of the following parts:

Test Arch Phantom

The specially designed Test Arch allows high precision positioning of both the device and any of the validation dipoles.

ER3DV6 Isotropic E-Field Probe

| | |
|----------------|--|
| Construction: | One dipole parallel, two dipoles normal to probe axis Built-in shielding against static charges PEEK enclosure material (resistant to organic solvents, e.g., glycoether) |
| Calibration: | In air from 100 MHz to 3.0 GHz (absolute accuracy $\pm 6.0\%$, $k=2$) |
| Frequency: | 100 MHz to > 6 GHz; Linearity: ± 0.2 dB (100 MHz to 3 GHz) |
| Directivity: | ± 0.2 dB in air (rotation around probe axis) ± 0.4 dB in air (rotation normal to probe axis) |
| Dynamic Range: | 2 V/m to > 1000 V/m; Linearity: ± 0.2 dB |
| Dimensions: | Overall length: 330 mm (Tip: 16 mm) Tip diameter: 8 mm (Body: 12 mm) Distance from probe tip to dipole centers: 2.5 mm The closest part of the sensor element is 1.1 mm closer to the tip |
| Application: | General near-field measurements up to 6 GHz Field component measurements |

H3DV6 3-Dimensional H-Field Probe

| | |
|-----------------------|---|
| Construction: | Three concentric loop sensors with 3.8 mm loop diameters resistively loaded detector diodes for linear response Built-in shielding against static charges PEEK enclosure material (resistant to organic solvents, e.g., glycoether) |
| Frequency: | 200 MHz to 3 GHz (absolute accuracy $\pm 6.0\%$, $k=2$); Output linearized |
| Directivity: | ± 0.25 dB (spherical isotropy error) |
| Dynamic Range: | 10 mA/m to 2 A/m at 1 GHz |
| E-Field Interference: | < 10% at 3 GHz (for plane wave) |
| Dimensions: | Overall length: 330 mm (Tip: 40 mm) Tip diameter: 6 mm (Body: 12 mm) Distance from probe tip to dipole centers: 3 mm The closest part of the sensor element is 1.9 mm closer to the tip |
| Application: | General magnetic near-field measurements up to 3 GHz Field component measurements Surface current measurements Measurements in air or liquids Low interaction with the measured field |

7. System Validation

The test setup was validated when first configured and verified periodically thereafter to ensure proper function. The procedure provided in this section is a validation procedure using dipole antennas for which the field levels were computed by numeric modeling.

Procedure

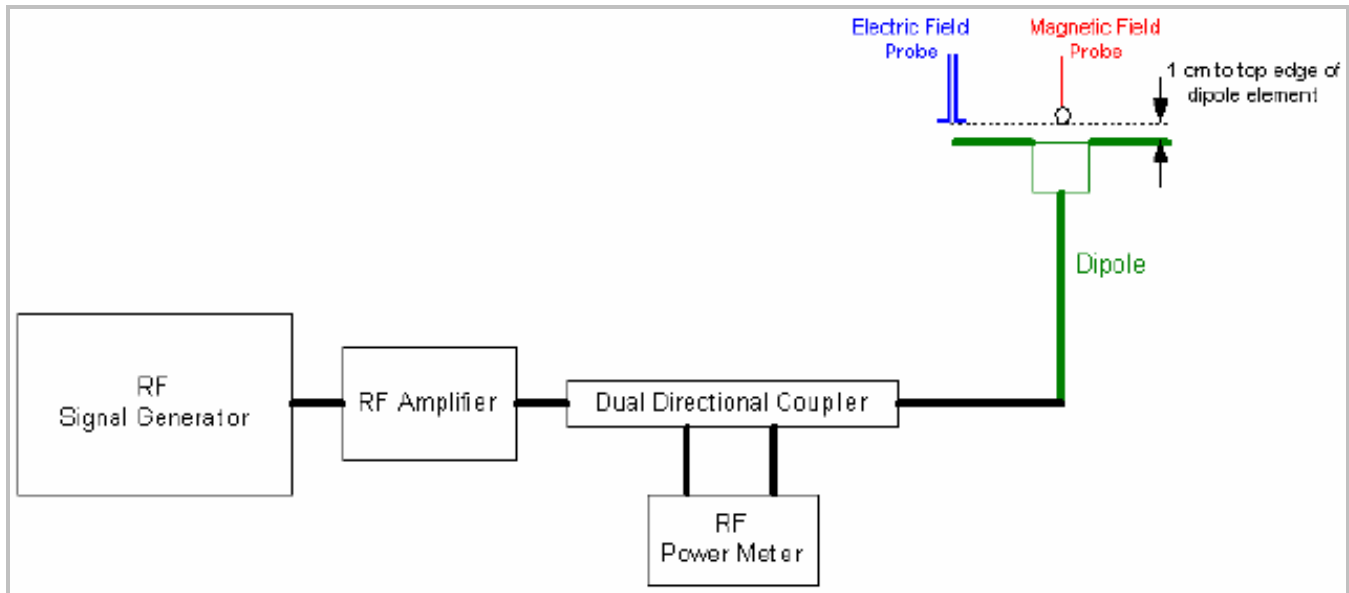

Place a dipole antenna meeting the requirements given in ANSI-PC63.19 2007 in the normally occupied by the WD.

The dipole antenna serves as a known source for an electrical and magnetic output. Position the E-field and H-field probes so that:

- The probes and their cables are parallel to the coaxial feed of the dipole antenna
- The probe cables and the coaxial feed of the dipole antenna approach the measurement area from opposite directions; and
- The center point of the probe element(s) are 10 mm from the closest surface of the dipole elements.

Scan the length of the dipole with both E-field and H-field probes and record the maximum values for each. Compare the readings to expected values.

Setup diagram

7.1. System Validation Results

E-field

| Calibration Dipole | f (MHz) | Input Power (mW) | Max. measured from | | Average max. above arm (V/m) | E-field Target Values (V/m) (From SPEAG) | Deviation ¹⁾ (%) |
|---------------------|---------|------------------|----------------------|---------------------|------------------------------|--|-----------------------------|
| | | | above high end (V/m) | above low end (V/m) | | | |
| CD835V3 SN 1014 | 835 | 100 | 161.4 | 149.3 | 155.35 | 161.8 | -3.99 |
| CD1880V3 SN 1122 | 1880 | 100 | 138.6 | 133.7 | 136.15 | 140.9 | -3.37 |
| CD1880V3 SN 1122 | 1730 | 100 | 150.4 | 150.1 | 150.25 | 153.6 | -2.18 |

H-field

| Calibration Dipole | f (MHz) | Input Power (mW) | Measured H-field (A/m) | H-field Target Values (A/m) (From SPEAG) | Deviation ¹⁾ (%) |
|---------------------|---------|------------------|------------------------|--|-----------------------------|
| CD835V3 SN 1014 | 835 | 100 | 0.450 | 0.460 | -2.17 |
| CD1880V3 SN 1122 | 1880 | 100 | 0.440 | 0.459 | -4.14 |
| CD1880V3 SN 1122 | 1730 | 100 | 0.460 | 0.487 | -5.54 |

Notes:

- 1) Delta (Deviation) % = 100 * (Measured value minus Target value) divided by the Target value. Deltas within ±25% are acceptable, of which 12% is deviation and 13% is measurement uncertainty.
- 2) The maximum E-field or H-field were evaluated and compared to the target values provided by SPEAG in the calibration certificate of specific dipoles.
- 3) Please refer to the attachment for detailed measurement data and plots.

8. Probe Modulation Factor (PMF)

Purpose

The HAC Standard requires measurement of the peak envelope E- and H-fields of the wireless device (WD). Para. 4.2.2.1, and C.3.1 of the standard describes the Probe Modulation Response Factor that shall be applied to convert the probe reading to Peak Envelope Field.

Definitions

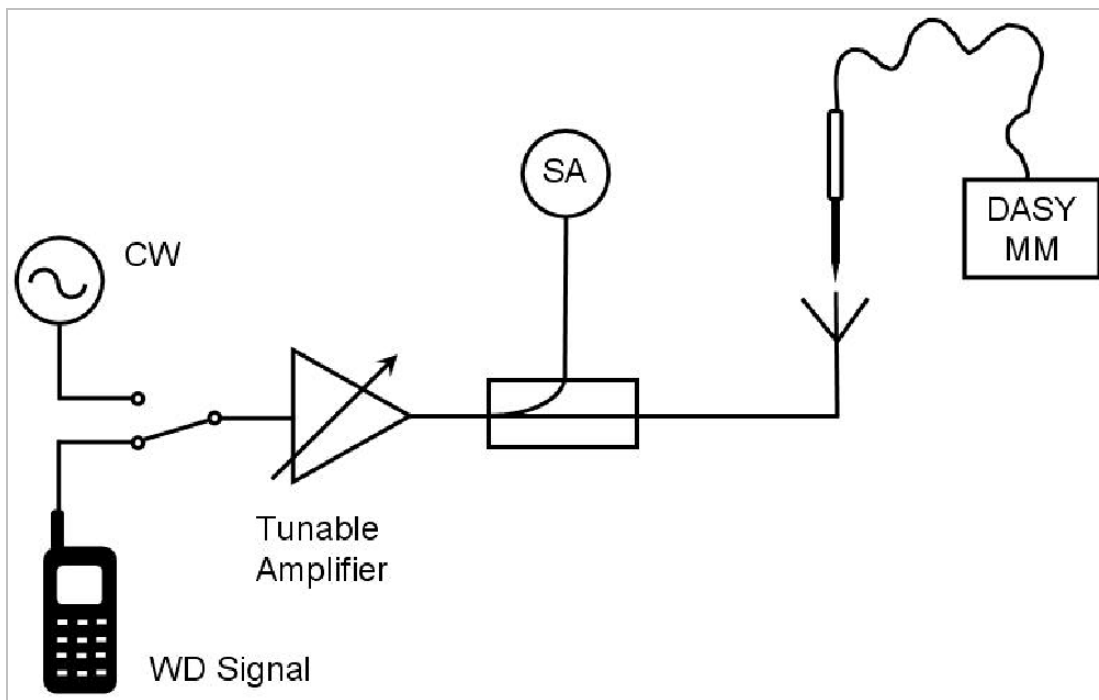

The Probe Modulation Factor (PMF) is defined as the ratio of the field readings for a CW and a modulated signal with the equivalent Field Envelope Peak as defined in the Standard (Chapter C.3.1).

Evaluation Procedure for Unknown PMF (DASY4 Application note, Section 28.8)

The proposed measurement setup corresponds to the procedure as required in the Standard, Chapter C.3.1.

1. Install a calibration dipole for the appropriate frequency band under the Test Arch Phantom and select the proper phantom section according to the probe type installed (E- or H-field). Move the probe to the field reference point. (Do not move the probe between the subsequent CW and modulated measurements.)
2. Install the field probe in the setup.
3. The modulated signal to the dipole must be monitored to record peak amplitude and compared to a CW signal with the same peak envelope level (e.g., with a directional coupler and a spectrum analyzer in zero span mode set to the operating frequency). To determine the peak envelope level of the modulated signal properly, the settings of a spectrum analyzer shall be as follows:
 - Resolution bandwidth \geq emission bandwidth (4 MHz for UMTS bands, 300 kHz)
 - Video bandwidth \geq 20 kHz
 - Span: zero
 - Center Frequency: nominal center frequency of channel
 - Detection: RMS detection with averaging turned on
 - Trigger: Video or IF trigger, adjusted to give a stable display of the transmission
 - Sweep rate: Sufficiently rapid to permit the transmit pulse to be resolved accurately. The sweep shall be long enough to show a complete transmission. The sweep time may be set to allow a full transmission cycle, displaying the on and off time.
4. Define a DASY4 document and set the procedure properties (frequency, modulation frequency and crest factor) according to the measured signal. Define a multimeter job for the field reading.
5. Define a second procedure for the evaluation of the CW signal (frequency set as above, modulation frequency = 0, crest factor = 1) and a multimeter job.

PMF Measurement Setup Diagram

The HAC measurement procedure is as follows:

- a) Modulated signals (WD and 80% AM) measurement:
 - 1) Connect the modulated signal using the appropriate frequency via the cable to the dipole.
 - 2) The signal to the dipole must be monitored to record peak amplitude with a directional coupler and a spectrum analyzer.
 - 3) Run the multimeter job in the procedure with the corresponding modulation setting in continuous mode.
 - 4) Read the envelope peak on the monitor in order to adjust the CW signal later to the same level.
- b) CW signal measurement:
 - 1) Change the signal to CW at the same center frequency, without touching or moving the dipole and probe in the setup.
 - 2) Adjust the CW signal amplitude to the same peak level on the spectrum analyzer (keep the same bandwidth and attenuation for CW and modulated signals).
 - 3) Run the multimeter job in the CW procedure in continuous mode.
 - 4) Read the multimeter total field display and note it together with modulation type and frequency.
 - 5) Calculate the Probe Modulation Factor as the ratio between the CW multimeter field reading and the reading for the applicable modulation. I.e., $PMF = \frac{E_{cw}}{E_{mod}}$ and similar for H.

8.1. PMF Measurement Results

GSM

| Probe | Frequency (MHz) | Type of signal | E-field V/m | PMF |
|---------------|-----------------|----------------|-------------|------|
| E-Field Probe | 835 | GSM | 54.4 | 2.79 |
| | | CW | 152.0 | |
| | 1880 | GSM | 29.8 | 2.82 |
| | | CW | 83.9 | |
| Probe | Frequency (MHz) | Type of signal | H-field A/m | PMF |
| H-Field Probe | 835 | GSM | 0.144 | 2.79 |
| | | CW | 0.402 | |
| | 1880 | GSM | 0.132 | 2.84 |
| | | CW | 0.375 | |

W-CDMA

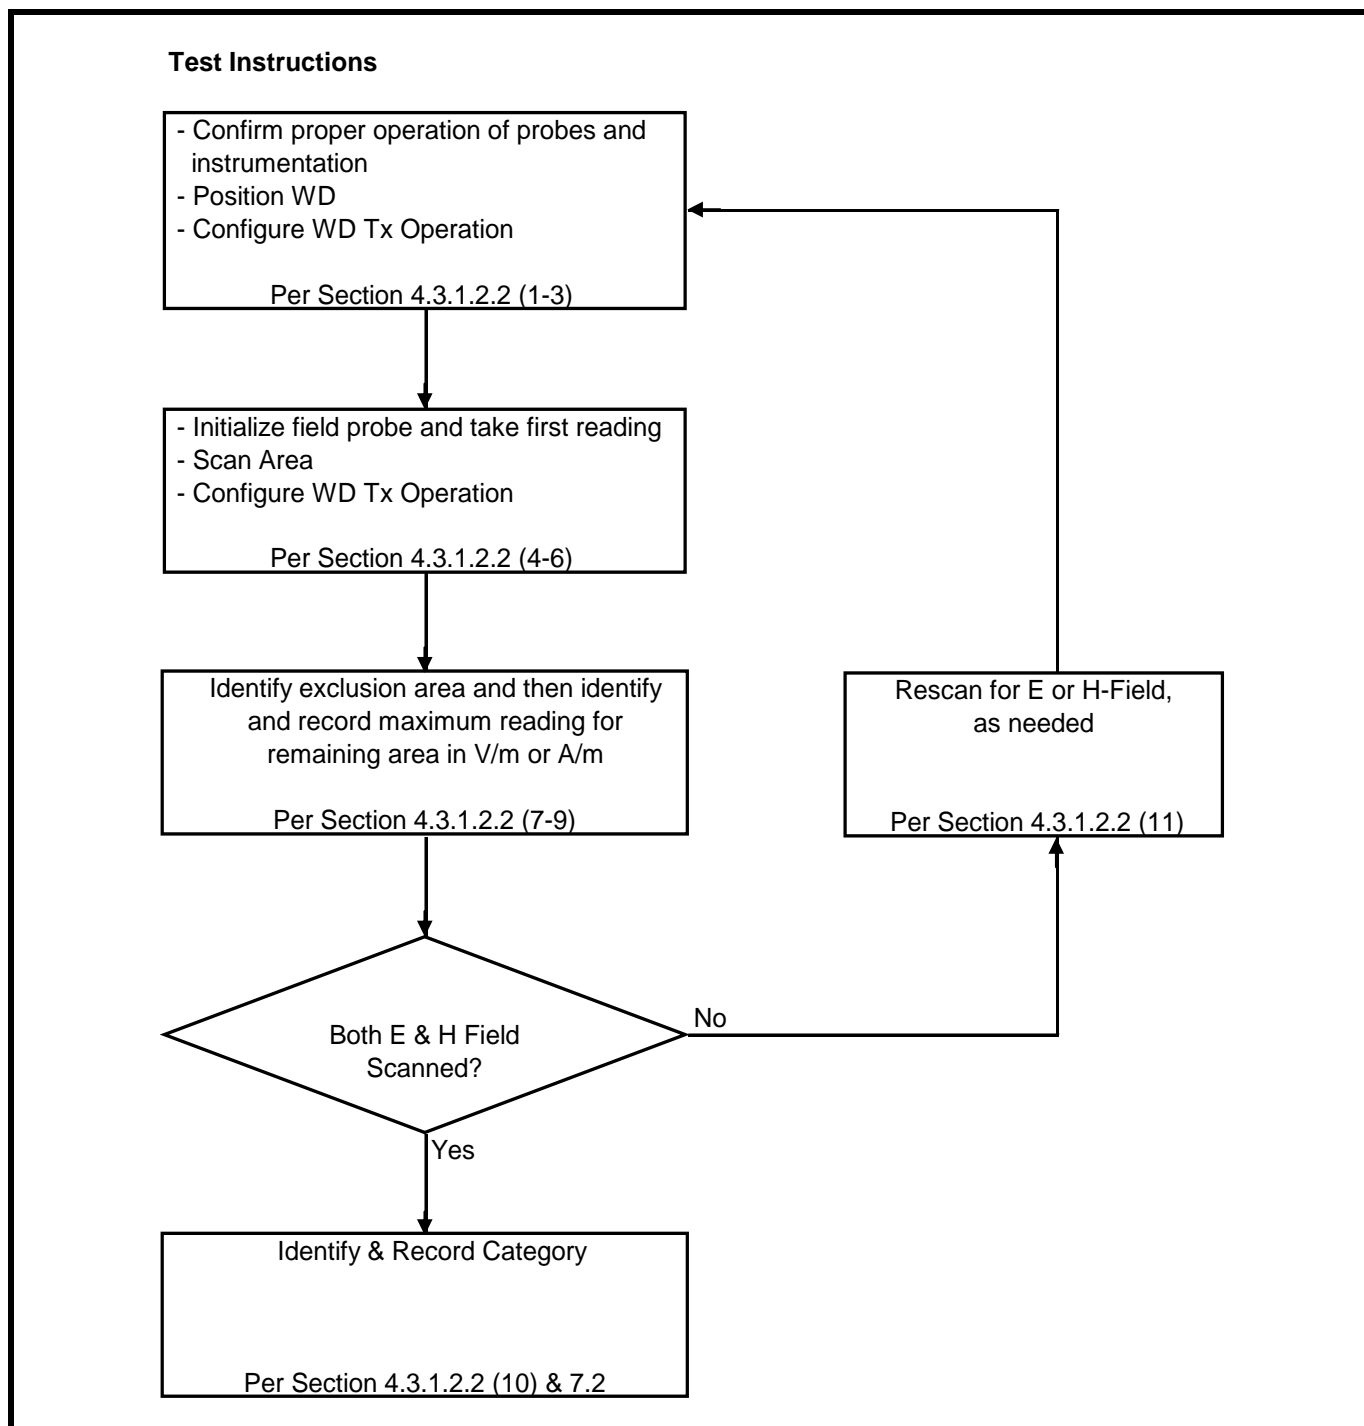

| Probe | Frequency (MHz) | Type of signal | E-field V/m | PMF |
|---------------|-----------------|----------------|-------------|------|
| E-Field Probe | 835 | UMTS | 49.66 | 0.89 |
| | | CW | 44.30 | |
| | 1730 | UMTS | 37.29 | 0.96 |
| | | CW | 35.79 | |
| | 1880 | UMTS | 36.90 | 0.96 |
| | | CW | 35.30 | |
| Probe | Frequency (MHz) | Type of signal | H-field A/m | PMF |
| H-Field Probe | 835 | UMTS | 0.144 | 0.90 |
| | | CW | 0.129 | |
| | 1730 | UMTS | 0.132 | 0.95 |
| | | CW | 0.126 | |
| | 1880 | UMTS | 0.128 | 0.95 |
| | | CW | 0.122 | |

9. HAC RF Emissions Test Procedure

The following are step-by-step test procedures.

1. Confirm proper operation of the field probe, probe measurement system and other instrumentation and the positioning system.
2. Position the WD in its intended test position.
3. Configure the WD normal operation for maximum rated RF output power, at the desired channel and other operating parameters, (e.g. test mode) as intended for the test.
4. The center sub-grid shall be centered on the center of the WD output (acoustic or T-coil output), as appropriate. Locate the field probe at the initial test position in the 5 x 5 cm grid, which is contained in the measurement plane, see illustrated in Figure 5.
5. Record the reading.
6. Scan the entire 5 x 5 cm region in equally spaced increments and record the reading at each measurement point. The distance between measurement points shall be sufficient to assure the identification of the peak reading.
7. Identify the five contiguous sub-grids around the center sub-grid with the lowest maximum strength readings. Thus the 6 areas to be used to determine the WD's peak emissions are identified and outlined for the final manual scan. Please note that a maximum of five blocks can be excluded for both E- and H-field measurements for the WD output being measured. State another way, the center sub-grid and 3 other must be common to both the E- and H-field measurements.
8. Identify the highest field reading within the non-excluded sub-grids identified in step 7.
9. Convert the highest field reading within identified in step 8 to peak V/m or A/m, as appropriate.
10. Repeat steps 1-10 for both the E- and H-field measurements.
11. Compare this reading to the categories in ANSI-PC63.19 and record the resulting category. The lowest category number listed in ANSI-PC63.19 obtained in step 10 for either E or H field determines the M category for the audio coupling mode assessment. Record the WD category rating.

Test flowchart Per ANSI-PC63.19 2007

10. RF Emissions Measurement Criteria

Telephone near-field Categories in linear units

| | | Telephone RF Parameters | | | |
|----------|-----|-------------------------|-------------------------|-------------------------|-------------------------|
| | | < 960 MHz | | > 960 MHz | |

12. Worst-case Test Plots

E-field worst-cast test plot for Part 22

Date: 9/9/2012

Test Laboratory: UL CCS SAR Lab C

GSM 850

Communication System: GPRS-FDD (TDMA, GMSK, 1 slot); Frequency: 824.4 MHz; Duty Cycle: 1:8.00018
 Phantom section: RF Section
 DASY5 Configuration:
 - Probe: ER3DV6 - SN2339; ConvF(1, 1, 1); Calibrated: 1/20/2012
 - Sensor-Surface: (Fix Surface)
 - Electronics: DAE4 Sn1239; Calibrated: 6/6/2012
 - Phantom: HAC Test Arch with AMCC; Type: SD HAC P01 BB
 - Measurement SW: DASY52, Version 52.8 (1); SEMCAD X Version 14.4.5 (3634)

E-Field/L ch/Hearing Aid Compatibility Test (101x101x1): Measurement grid: dx=5mm, dy=5mm

Maximum value of peak Total field = 113.4 V/m

Probe Modulation Factor = 2.790

Device Reference Point: 0, 0, -6.3 mm

Reference Value = 50.583 V/m; Power Drift = 0.03 dB

Hearing Aid Near-Field Category: M4 (AWF -5 dB)

Peak E-field in V/m

| | | |
|----------------------------|---------------------------|---------------------------|
| Grid 1 99.134 M4 | Grid 2 106.3 M4 | Grid 3 100.3 M4 |
| Grid 4 108.1 M4 | Grid 5 113.4 M4 | Grid 6 106.6 M4 |
| Grid 7 115.0 M4 | Grid 8 117.9 M4 | Grid 9 108.2 M4 |

E-field worst-cast test plot for Part 27

Date: 9/9/2012

Test Laboratory: UL CCS SAR Lab C

W-CDMA Band IV

Communication System: UMTS-FDD (WCDMA); Frequency: 1712.4 MHz; Duty Cycle: 1:1

Phantom section: RF Section

DASY5 Configuration:

- Probe: ER3DV6 - SN2339; ConvF(1, 1, 1); Calibrated: 1/20/2012
- Sensor-Surface: (Fix Surface)
- Electronics: DAE4 Sn1239; Calibrated: 6/6/2012
- Phantom: HAC Test Arch with AMCC; Type: SD HAC P01 BB
- Measurement SW: DASY52, Version 52.8 (1); SEMCAD X Version 14.4.5 (3634)

E-Field/L ch/Hearing Aid Compatibility Test (101x101x1): Measurement grid: dx=5mm, dy=5mm

Maximum value of peak Total field = 21.224 V/m

Probe Modulation Factor = 0.960

Device Reference Point: 0, 0, -6.3 mm

Reference Value = 11.738 V/m; Power Drift = 0.02 dB

Hearing Aid Near-Field Category: M4 (AWF 0 dB)

Peak E-field in V/m

| | | |
|----------------------------|----------------------------|----------------------------|
| Grid 1 26.909 M4 | Grid 2 28.477 M4 | Grid 3 26.284 M4 |
| Grid 4 11.967 M4 | Grid 5 16.608 M4 | Grid 6 16.632 M4 |
| Grid 7 21.224 M4 | Grid 8 21.224 M4 | Grid 9 18.250 M4 |

E-field worst-cast test plot for Part 24

Date: 9/9/2012

Test Laboratory: UL CCS SAR Lab C

GSM 1900

Communication System: GPRS-FDD (TDMA, GMSK, 1 slot); Frequency: 1909.8 MHz; Duty Cycle: 1:8.00018

Phantom section: RF Section

DASY5 Configuration:

- Probe: ER3DV6 - SN2339; ConvF(1, 1, 1); Calibrated: 1/20/2012
- Sensor-Surface: (Fix Surface)
- Electronics: DAE4 Sn1239; Calibrated: 6/6/2012
- Phantom: HAC Test Arch with AMCC; Type: SD HAC P01 BB
- Measurement SW: DASY52, Version 52.8 (1); SEMCAD X Version 14.4.5 (3634)

E-Field/H ch/Hearing Aid Compatibility Test (101x101x1): Measurement grid: dx=5mm, dy=5mm

Maximum value of peak Total field = 68.121 V/m

Probe Modulation Factor = 2.820

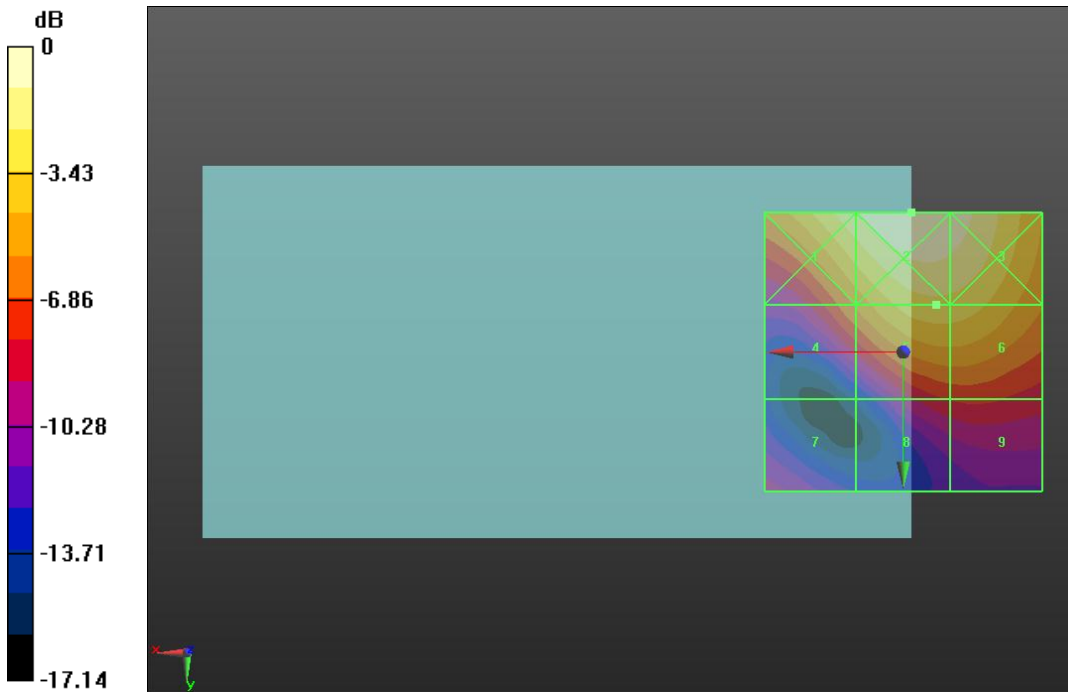

Device Reference Point: 0, 0, -6.3 mm

Reference Value = 21.693 V/m; Power Drift = 0.0024 dB

Hearing Aid Near-Field Category: M3 (AWF -5 dB)

Peak E-field in V/m

| | | |
|----------------------------|----------------------------|----------------------------|
| Grid 1 79.230 M3 | Grid 2 91.928 M2 | Grid 3 87.220 M2 |
| Grid 4 48.994 M3 | Grid 5 68.121 M3 | Grid 6 67.542 M3 |
| Grid 7 29.962 M4 | Grid 8 37.020 M4 | Grid 9 37.906 M4 |

0 dB = 91.930V/m

H-field worst-cast test plot for Part 22

Date: 9/9/2012

Test Laboratory: UL CCS SAR Lab C

GSM 850

Communication System: GPRS-FDD (TDMA, GMSK, 1 slot); Frequency: 824.4 MHz; Duty Cycle: 1:8.00018

Phantom section: RF Section

DASY5 Configuration:

- Probe: H3DV6 - SN6157; ; Calibrated: 1/30/2012
- Sensor-Surface: (Fix Surface)
- Electronics: DAE4 Sn1239; Calibrated: 6/6/2012
- Phantom: HAC Test Arch with AMCC; Type: SD HAC P01 BB
- Measurement SW: DASY52, Version 52.8 (1); SEMCAD X Version 14.4.5 (3634)

H-Field/L ch/Hearing Aid Compatibility Test (101x101x1): Measurement grid: dx=5mm, dy=5mm

Maximum value of peak Total field = 0.169 A/m

Probe Modulation Factor = 2.790

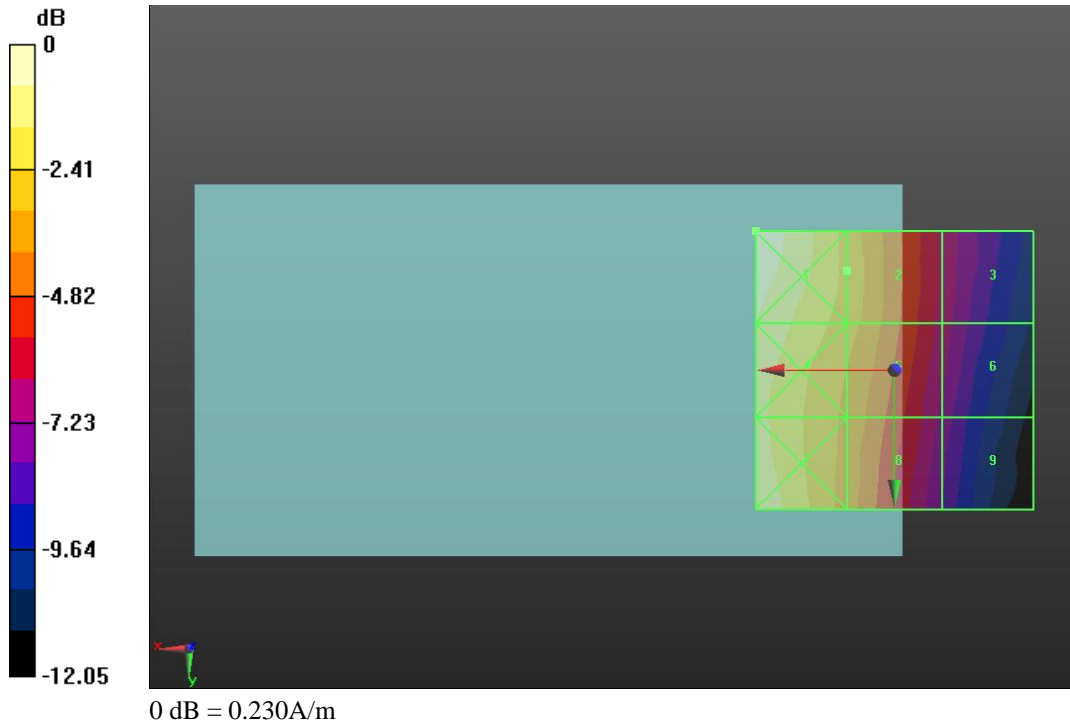

Device Reference Point: 0, 0, -6.3 mm

Reference Value = 0.051 A/m; Power Drift = -0.05 dB

Hearing Aid Near-Field Category: M4 (AWF -5 dB)

Peak H-field in A/m

| | | |
|---------------------------|---------------------------|---------------------------|
| Grid 1 0.226 M4 | Grid 2 0.169 M4 | Grid 3 0.108 M4 |
| Grid 4 0.210 M4 | Grid 5 0.165 M4 | Grid 6 0.106 M4 |
| Grid 7 0.211 M4 | Grid 8 0.155 M4 | Grid 9 0.098 M4 |
