FCC Classification:	Unlicensed National Inform	ation Infrastructure (UNII)	
FCC Rule Part(s):	Part 15.407(DFS)		
IC Rule :	RSS-210(DFS)		

Engineering Statement:

The measurements shown in this report were made in accordance with the procedures indicated, and the emissions from this equipment were found to be within the limits applicable. I assume full responsibility for the accuracy and completeness of these measurements, and for the qualifications of all persons taking them.

HCT CO., LTD. Certifies that no party to this application has subject to a denial of Federal benefits that includes FCC benefits pursuant

to section 5301 of the Anti-Drug Abuse Act of 1998,21 U.S. C.853(a)

Report prepared by

: Kwang II Yoon

Test engineer of RF Team

FCC PT.15.247 TEST REPORT	FCC & IC CERTIFICATION REPORT			www.hct.co.kr
Test Report No. HCTR1308FR16	Date of Issue: August 06, 2013	EUT Type:2.4G/5G Dual WIFI Tablet	FCC ID: ZNFV500	IC: 2703C-V500

This report has been prepared to demonstrate compliance with the requirements for Dynamic Frequency Selection(DFS) as stated in FCC 06-96. Testing was performed LG-V500 in accordance with the measurement procedure described in Appendix B of FCC 06-96. As of July 20, 2007 all devices operating in the UNII-II Band and /or the UNII-III Bands must comply with the DFS requirements. As the EUT does not have radar detection capability it was evaluated as a Client Only Device.

4. INSTRUMENT CALIBRATION

The measuring equipment, which was utilized in performing the tests documented herein, has been calibrated in accordance with the manufacturer's recommendations for utilizing calibration equipments, which is traceable to recognized national standards.

5. FACILITIES AND ACCREDITATIONS

5.1 FACILITIES

The SAC(Semi-Anechoic Chamber) and conducted measurement facility used to collect the radiated data are located at the 105-1, Jangam-ri, Majang-Myeon, Icheon-si, Kyunggi-Do, 467-811, Korea. The site is constructed in conformance with the requirements of ANSI C63.4. (Version :2003) and CISPR Publication 22. Detailed description of test facility was submitted to the Commission and accepted dated March 02, 2011 (Registration Number: 90661)

5.2 EQUIPMENT

Radiated emissions are measured with one or more of the following types of Linearly polarized antennas: tuned dipole, bi-conical, log periodic, bi-log, and/or ridged waveguide, horn. Spectrum analyzers with pre-selectors and quasi-peak detectors are used to perform radiated measurements. Conducted emissions are measured with Line Impedance Stabilization Networks and EMI Test Receivers. Calibrated wideband preamplifiers, coaxial cables, and coaxial attenuators are also used for making measurements.

All receiving equipment conforms to CISPR Publication 16-1, "Radio Interference Measuring Apparatus and Measurement Methods."

Test Report No. HCTR1308FR16	Date of Issue: August 06, 2013	EUT Type:2.4G/5G Dual WIFI Tablet	FCC ID: ZNFV500	IC: 2703C-V500

7. DESCRIPTION OF DYNAMIC FREQUENCY SELECTION TEST

7.1 APPLICABILITY

The following table from FCC 06-96 lists the applicable requirements for the DFS testing. The device evaluated in this report is considered a client device without radar detection capability.

	Operation Mode					
Requirement	Master	Client Without Radar	Client With Radar			
	Waster	Detection	Detection			
Non-Occupancy Period	Yes	Not required	Yes			
DFS Detection Threshold	Yes	Not required	Yes			
Channel Availability Check Time	Yes	Not required	Not required			
Uniform Spreading	Yes	Not required	Not required			
U-NII Detection Bandwidth	Yes	Not required	Yes			

Table 1-1. DFS Applicability

	Operation Mode					
Requirement	Master	Client Without Radar	Client With Radar			
	Waster	Detection	Detection			
DFS Detection Threshold	Yes	Not required	Yes			
Channel Closing Transmission Time	Yes	Yes	Yes			
Channel Move Time	Yes	Yes	Yes			
U-NII Detection Bandwidth	Yes	Not required	Yes			

Table 1-2. DFS Applicability During Normal Operation

7.2 REQUIREMENTS

Per FCC 06-96 the following are the requirements for Client Devices:

- a) A Client Device will not transmit before having received appropriate control signals from a Master Device.
- b) A Client Device will stop all its transmissions whenever instructed by a Master Device to which it is associated and will meet the Channel Move Time and Channel Closing Transmission Time requirements.

The Client Device will not resume any transmissions until it has again received control signals from a Master Device.

c) If a Client Device is performing In-Service Monitoring and detects a Radar Waveform

FCC PT.15.247 TEST REPORT		FCC & IC CERTIFICATION REPORT						
Test Report No. HCTR1308FR16	Date of Issue: August 06, 2013	EUT Type:2.4G/5G Dual WIFI Tablet	FCC ID: ZNFV500	IC: 2703C-V500				

above the DFS Detection Threshold, it will inform the Master Device. This is equivalent to the Master Device detecting the Radar Waveform and d) through f) of section 5.1.1 apply.

d) Irrespective of Client Device or Master Device detection the Channel Move Time and Channel Closing Transmission Time requirements remain the same.

Channel Move Time and Channel Closing Transmission Time requirements are listed following table.

Parameter	Value			
Non-occupancy period	Minimum 30 minutes			
Channel Availability Check Time	60 seconds			
Channel Move Time	10 seconds			
	See Note 1.			
	200 milliseconds + an			
Channel Closing Transmission Time	Aggregate of 60 milliseconds over			
	Remaining 10 second period. See Notes			
	1 and 2.			
	Minimum 80 % of the U-NII			
U-NII Detection Bandwidth	99 % transmission			
	Power bandwidth. See Note 3.			
Note 1: The instant that the Channel Move Time and the Chann	el Closing Transmission Time begins is			
as follows:				
For the Short Pulse Radar Test Signals this instant is the end of the second seco	ne Burst.			
For the Frequency Hopping radar Test Signal, this instant is the end	nd of the last radar			
Burst generated.				
For the Long Pulse Radar Test Signal this instant is the end of the	12 second period			
defining the Radar Waveform.				
Note 2: The Channel Closing Transmission Time is comprised	of 200 milliseconds starting at			
the begging of the Channel Move Time plus any additional intermitt	ent control signals required			
to facilitate a Channel move (an aggregate of 60 milliseconds) during the remainder of the 10				
second period. The aggregate duration of control signals will not count quiet periods in between				
transmissions.				
Note 3: During the U-NII Detection Bandwidth detection test, R	adar type 1 is used and for each			
frequency step the minimum percentage of detection is 90 percent.	Measurements are performed			
with no data traffic.				

Table 1-3: DFS Response requirements

FCC PT.15.247 TEST REPORT		FCC & IC CERTIFICATION REPORT		www.hct.co.kr
Test Report No.	Date of Issue:	EUT Type:2.4G/5G Dual WIFI Tablet	FCC ID:	IC:
HCTR1308FR16	August 06, 2013		ZNFV500	2703C-V500

7.3 DFS DETECTION THRESHOLD VALUES

The DFS detection thresholds are defined for Master devices and Client Devices with In-service monitoring. These detection thresholds are listed in the following table.

Maximum Transmit Power	Value (See Notes 1 and 2)				
≥ 200 milliwatt	-64 dBm				
< 200 milliwatt	-62 dBm				
Note 1: This is the level at the input of the receiver assuming a 0 dBi receive antenna.					
Note 2: Throughout these test procedures an additional 1 dB has been added to the amp	blitude of				
the test transmission waveforms to account for variations in measurement equipment. This will					
ensure that the test signal is at or above the detection threshold level to trigger a DFS re	sponse.				

Table 1-4: Detection Thresholds for Master Devices and Client Devices with Radar Detection

7.4 PARAMETERS OF DFS TEST SIGNALS

As the EUT is a Client Device with no Radar Detection only one type radar pulse is required for the testing. Radar Pulse type 1 was used in the evaluation of the Client device for the purpose of measuring the Channel Move Time and the Channel Closing Transmission Time. Table 3-5 lists the parameters for the Short Pulse Radar Waveforms. A plot of the Radar pulse Type 1 used for testing is included in Section 5.0 of this report.

Radar Type	Pulse Width (μsec)	PRI (µsec)	Number Of Pulses	Minimum Percentage of Successful Detection	Minimum Number of Trials
1	1	1428	18	60 %	30
2	1-5	150-230	23-29	60 %	30
3	6-10	200-500	16-18	60 %	30
4	11-20	200-500	12-16	60 %	30
Aggregate (Rada	ar Types 1-4)		80 %	120

7.5 TEST AND MEASUREMENT SYSTEM

General Test Setup Procedure:

- 1. Connect FCC approved Master AP to a network, via wired Ethernet, that allows connection to an FTP server.
- 2. Associate the EUT with the Master AP.
- 3. Launch the FTP application on the EUT.
- 4. Connect to the FTP server application to the FTP server hosting the file
- 5. Initiate an FTP download of the file from the host.
- 6. Monitor the channel loading during transfer.
- 7. Reduce the maximum allowed data rate for the Master AP, using the AP's GUI interface.
- 8. Repeat steps 5-7 until the channel loading is as close to 20 % as possible.
- 9. Record the data rate setting on the Master AP and the channel loading.
- 10. While the system is performing an FTP transfer using the settings form item 9 above, perform the Channel Closing Transmission Time and Channel Move Time Measurements as required by FCC 06-96 using a conducted test.

PROCEDURE

The FCC 06-96 describes a radiated test setup and a conducted test setup. A radiated test setup was used for this testing. Figure 3-1 shows the typical test setup. Each one channel selected between 5260 and 5320 MHz, 5500 and 5700 is chosen for the testing.

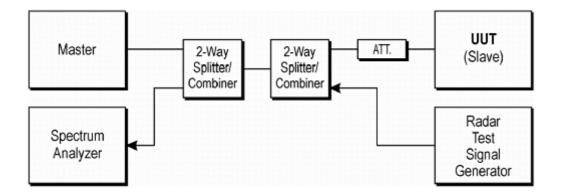

Figure 3-1. Conducted Test Setup for DFS

- 1. The radar pulse generator is setup to provide a pulse at the frequency that the Master and Client are operating. A Type 1 radar pulse with a 1 µs pulse width and a 1428 µs PRI is used for the testing.
- 2. The vector signal generator is adjusted to provide the radar burst (18 pulses) at a level of approximately -62 dBm at the antenna of the Master device.

	FCC PT.15.247 TEST REPORT		FCC & IC CERTIFICATION REPORT		www.hct.co.kr		
	Test Report No. HCTR1308FR16	Date of Issue: August 06, 2013	EUT Type:2.4G/5G Dual WIFI Tablet	FCC ID: ZNFV500	IC: 2703C-V500		
Page 1.1 of 24							

- 3. The Client Device (EUT) is set up per the diagram in Figure 3-1 and communications between the Master device and the Client is established.
- 4. The MPEG file specified by the FCC (*"6½ Magic Hours"*) is streamed from the "file computer" through the Master to the Slave Device and played in full motion video using Media Player Classic Ver.6.4.8.6 in order to properly load the network.
- 5. The real time spectrum analyzer is set to record about 15 sec window to any transmissions occurring up to and after 10 sec.
- 6. The system is again setup and the monitoring time is shortened in order to capture the Channel Closing Transmission Time. This time is measured to insure that the Client ceases transmission within 200 ms and the aggregate of emissions occurring after 200 ms up to 10 sec do not exceed 60 ms.

(Note: the channel may be different since the Master and Client have changed channels due to the detection of the initial radar pulse.)

7. After the initial radar burst the channel is monitored for 30 minutes to insure no transmissions or beacons occur. A second monitoring setup is used to verify that the Master and Client have both moved to different channels.

SYSTEM CALIBRATION

A-50-ohm load is connected in place of the spectrum analyzer, and the spectrum analyzer is connected to a coaxial cable. The signal generator is set to CW mode. The amplitude of the signal generator is adjusted to yield a level of - 62 dBm as measured on the spectrum analyzer.

Without changing any of the instrument settings, the spectrum analyzer is reconnected to the common port of the spectrum analyzer combiner or divider.

The spectrum analyzer displays the level of the signal generator higher than the client TX level. Because we can not search the signal generator in the spectrum analyzer when the signal generator level is - 62 dBm. The spectrum analyzer will still indicate the level higher than the client TX level.

	FCC & IC CERTIFICATION REPORT			
Test Report No.Date of IssHCTR1308FR16August 06,	EIII Ivne:24(3/5(31)ual WIEL Jablet	FCC ID: ZNFV500	IC: 2703C-V500	

The EUT operates over the 5260 MHz - 5320 MHz and 5500 MHz - 5700 MHz ranges.

The EUT is a slave device without radar detection.

The EUT antenna has a gain of 1.64 dBi in the 5260 MHz - 5320 MHz band and 0.75 dBi in the 5500 MHz- 5700 MHz band.

The highest power level within these bands in 14.09 dBm EIRP in the 5260 MHz - 5320 MHz band and 13.12 dBm EIRP in the 5500 MHz – 5700 MHz band.

The EUT one transmitter/receiver chain connected to a coaxial cable to perform conducted tests.

TPC is not required since the maximum EIRP is less than 500 mW.

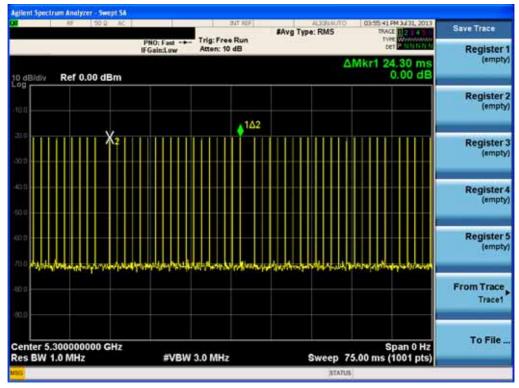

The EUT utilizes the 802.11a/n/ac architecture. Three nominal channel bandwidth is implemented: 20 MHz and 40 MHz

Channel Closing Transmission Time, Aggregate Time After 200 ms

Calculation of Aggregate Time:

Pulse width = 18.0 ms (Delta Marker5)

Number of pulses occurring after 200 ms from end of burst = 3 (Number from M3 to M4)

Aggregate time from 200 ms to 10 sec after burst = 3 x 18.0 ms = 54 ms

Aggregate Time: 54 ms

Limit: 60 ms
