

Circuit Description

1, IC U2(M24-001) is used for wireless transmission chip. The signal to the receiver by built-in RF, and a clock frequency of the 16MHz as base clock signal, the 2.4G RF transmitting frequency is 2405 to 2476MHz with GFSK modulation.

2, The work voltage is DC 1.5V by AAA battery or NI-MH rechargeable battery, and you could to recharge the battery via USB charging port.
