

Working Description

The transmitter is working as a remote controller, which is going to control the function of the massage, and the frequencies used in the 1 channel (2421MHz).

The transmitter of the EUT (Interactive Remote Controller) is powered by 3V batteries.

The carrier signal is generated by a RF ASIC (CC2591) than through L3, C33, and C31 drive the antenna and the modulation type is MSK.
