Software security questions and answers per KDB 594280 D02:

| | Software security questions and answers per KDB 394280 Doz. | | | | |
|----|---|---------------------------------------|--|--|--|
| | Software Security description – General Description | | | | |
| 1. | Describe how any software/firmware update will | We do not release the firmware on | | | |
| | be obtained, downloaded, and installed. Software | our website for downloading. Our | | | |
| | that is accessed through manufacturer's website | direct host manufacturer (OEM) can | | | |
| | or device's management system, must describe | request the firmware from us and it | | | |
| | the different levels of security. | will be made available via secure | | | |
| | | server. | | | |
| 2 | Describe all the radio frequency parameters that | Radio frequency parameters are | | | |
| | are modified by any software/firmware without | limited by US regulatory domain | | | |
| | any hardware changes. Are these parameters in | and country code to limit frequency | | | |
| | some way limited, such that, it will not exceed | and transmit power levels. These | | | |
| | the authorized parameters? | limits are stored in non-volatile | | | |
| | | memory by the module | | | |
| | | manufacturer at the time of | | | |
| | | production. They will not exceed | | | |
| | | the authorized values. | | | |
| 3 | Describe in detail the authentication protocols | The firmware is installed on each | | | |
| | that are in place to ensure that the source of the | single module during | | | |
| | software/firmware is legitimate. Describe in | manufacturing process. The correct | | | |
| | detail how the software is protected against | firmware is verified and installed by | | | |
| | modification | the module manufacturer. | | | |
| | | In addition, the firmware binary is | | | |
| | | encrypted using open SSL | | | |
| | | encryption and the firmware | | | |
| | | updates can only be stored in | | | |
| | | non-volatile memory when the | | | |
| | | firmware is authenticated. | | | |
| | | The encryption key is known by the | | | |
| | | module manufacturer only. | | | |
| | | | | | |

| 202 | place to ensure that installed software/firmware is legitimate | The process to flash a new firmware is using a secret key to decrypt the firmware, only correct decrypted firmware is stored in non-volatile memory (see #3). |
|-----|--|--|
| 5 | Describe in detail the verification protocols in place to ensure that installed software/firmware is legitimate | Standard open SSL encryption is used (see #3). |
| 6 | For a device that can be configured as a master and client (with active or passive scanning), explain how the device ensures compliance for each mode? In particular if the device acts as master in some band of operation and client in another; how is compliance ensured in each band of operation? | The device ensures the compliance by checking the configured parameter and operation values according to the regulatory domain and country code in each band. |
| | Software Security description – Third-P | Control of the contro |
| 1 | Explain if any third parties have the capability to operate a US sold device on any other regulatory domain, frequencies, or in any manner that is in violation of the certification. | No, third parties don't have the capability to access and change radio parameters. US sold modules are factory configured to US. |
| 2 | Describe, if the device permits third-party software or firmware installation, what mechanisms are provided by the manufacturer to permit integration of such functions while ensuring that the RF parameters of the device cannot be operated outside its authorization for operation in the U.S. In the description include what controls and/or agreements are in place with providers of third-party functionality to ensure the devices' underlying RF parameters are unchanged and how the manufacturer verifies the functionality. | The embedded software is protected via the measures explained in the previous section. Distributions of host operating software are encrypted with a key. |
| 3 | For Certified Transmitter modular devices, describe how the module grantee ensures that host manufacturers fully comply with these software security requirements for U-NII devices. If the module is controlled through driver software loaded in the host, describe how the drivers are controlled and managed such that the modular transmitter RF parameters are not modified outside the grant of authorization. Software Security description – USER CONTROLLER CONTROL | The module is not available for sale or installation outside of company licensing agreements. Modules are always installed in host systems in a factory by end integrators (OEM) responsible for loading authorized software. |
| 1 | Describe the user configurations permitted | There is no user configuration GUI. |
| | through the UI. If different levels of access are | |

| | 0.000 | mitted for professional installers, system | |
|---|--------------|---|-------------------------------------|
| | | grators or end-users, describe the differences. | THE COUNTY OF THE COUNTY |
| | | What parameters are viewable and configurable by different parties? | There is no user configuration GUI. |
| | b. ' | What parameters are accessible or modifiable | This device is not subject to |
| | 1 | to the professional installer? | professional installation |
| | 10 | i. Are the parameters in some way | |
| | | limited, so that the installers will not | |
| | | enter parameters that exceed those | |
| | | authorized? | |
| | 1 | ii. What controls exist that the user | |
| | | cannot operate the device outside its | |
| | | authorization in the U.S.? | |
| | | What configuration options are available to | The end user is not able to |
| |] | the end-user? | configure any parameters related to |
| | | | the devices radio |
| | | i. Are the parameters in some way | The parameters can only be |
| | | limited, so that the installers will not | changed remotely within the limits |
| | | enter parameters that exceed those | of country code US. |
| | | authorized? | , |
| | | | |
| | | ii. What controls exist that the user | The country code and regulatory |
| | | cannot operate the device outside its | domain control do limit all the |
| | | authorization in the U.S.? | parameters set |
| | | Is the country code factory set? Can it be | The country code is factory set and |
| | 9 | changed in the UI? | is never changed by UI. |
| | | | The country code is factory set and |
| | 19 | i. If so, what controls exist to ensure | is never changed by UI |
| | | that the device can only operate | |
| | | within its authorization in the U.S.? | |
| | 1 | What are the default parameters when the | At each boot up the country code |
| | 3 | device is restarted? | and the antenna gain are read from |
| | | | the non-volatile memory, those |
| | | | values are configured during |
| | | | module production. |
| 2 | | the radio be configured in bridge or mesh | Not supported |
| | 100-00 | le? If yes, an attestation may be required. | |
| | | ther information is available in KDB lication 905462 D02. | |
| 3 | F020 9075330 | a device that can be configured as a master | No end user controls or user |
| 3 | | client (with active or passive scanning), if | interface operation to change |
| | | is user configurable, describe what controls | master/client operation. |
| * | шіз | is user configurable, describe what controls | master/enem operation. |

| | exist, within the UI, to ensure compliance for each mode. If the device acts as a master in some bands and client in others, how is this configured to ensure compliance? | |
|---|---|---|
| 4 | For a device that can be configured as different types of access points, such as point-to-point or point-to-multipoint, and use different types of antennas, describe what controls exist to ensure compliance with applicable limits and the proper antenna is used for each mode of operation. See Section 15.407(a). | The device does not support these modes/features. |

Sincerely

(Signed)
