# Hopping Information

1. Scope of frequency used in this product is limited between 902 MHz and 928 MHz, which is divided into 50 channels (channel 1 to channel 50) with an interval of 0.5 MHz every two channels, and each channel 's working time is 3180us, in which TX keeps transmitting for 2500us, and at non-transmitting state for 680us.

2. The initial serial numbers of difference pairs aren't identical because it is a fixed serial number of frequency hopping for every pair of units, which is generated when establish code link, also, acquired manner of frequency hopping of every pair is at random.
