### **3.0 Test Results**

#### **3.1 Emission**

##### **3.1.1 Field Strength of Fundamental & Harmonics Emissions**

Test Requirement:	FCC 47CFR 15.231, (a) (1) FCC 47CFR 15.231, (a) (3)
Test Method:	ANSI C63.10:2013
Test Date:	2017-09-01
Mode of Operation:	Tx Test Mode (operating continuously for Radiated emission test) ON/OFF remote control / ON/OFF manual control (15.231, (a) (1)) Energy usage measurement mode (15.231, (a) (3)) Tx mode with Lamp load

#### **Test Method:**

The sample was placed 0.8m above the ground plane on a standard radiated emission test site. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. In the frequency range of 9kHz to 30MHz, The center of the loop antenna shall be 1 meter above the ground and rotated loop axis for maximum reading. The emissions worst-case are shown in Test Results of the following pages.

Remark: 3 orthogonal axis apply to hand-held device only. Tx Test Mode is the worst case for radiated emission, since the EUT has been set to transmit RF signal continuously, and the peak level of the RF carrier output and modulation is no difference in listed modes.

### Transmitter deactivation Measurement:

Devices operated under the 15.231(a)(3), periodic transmissions at regular predetermined intervals are not permitted. However, polling or supervision transmissions, including data, to determine system integrity of transmitters used in security or safety applications are allowed if the total duration of transmissions does not exceed more than two seconds per hour for each transmitter. There is no limit on the number of individual transmissions, provided the total transmission time does not exceed two seconds per hour.

Total Transmission time =  $6.6 \times 4 = 26.4\text{ms}$

Test Requirement: FCC 47CFR 15.207  
 Test Method: ANSI C63.10:2013  
 Test Date: 2017-09-18

Mode of Operation: Tx mode with Lamp load

#### Test Method:

The test was performed in accordance with ANSI C63.10:2013, with the following: an initial measurement was performed in peak and average detection mode on the live line, any emissions recorded within 30dB of the relevant limit line were re-measured using quasi-peak and average detection on the live and neutral lines with the worst case recorded in the table of results.
