6 EUT description

6.1 General information

The EUT, model numbers H98QDH9PW7AN, H98QDF9PW6AN, H98QDD9PW5AN, is a rugged two way radio, operating in 380-470 MHz (UHF), 2402-2480 MHz (Bluetooth) and powered by 7.5 V lithium rechargeable battery, model NNTN7038A.

According to customer declaration all the EUT models have the same radio part, the difference between models is detailed in the table below.

EUT Model	Description of differences
H98QDH9PW7AN	Full keypad, full display
H98QDF9PW6AN	Limited keypad, full display
H98QDD9PW5AN	No keypad, no display

Therefore only the EUT model H98QDH9PW7AN as the most populated case was tested.

The EUT with PSM accessory as representing the most populated connection of GCAI connector (Motorola proprietary connector) including all controls and connections to external devices at audio and RF levels was tested. The external earpiece of the maximum length RLN4941A part number was connected to PSM to represent the worst case configuration. The Secure Wireless 2.0 POD, Earpiece 280 mm cable Bluetooth accessory, part number NTN2570A was connected to represent the longest earpiece cable and the most critical pairing conditions over RF protocol-secured.

7 Transmitter tests according to 47CFR part 90

7.1 Radiated spurious emission measurements

7.1.1 General

This test was performed to measure radiated spurious emissions from the EUT. Specification test limits are given in Table 7.1.1.

Table 7.1.1 Radiated spurious emission test limits

Frequency, MHz	Attenuation below carrier dBc	ERP of spurious, dBm	Equivalent field strength limit @ 3m, dB(μV/m)***
0.009 – 10 th harmonic*	43+10logP**	-13	84.4

* - Excluding the in band emission within ± 250 % of the authorized bandwidth from the carrier

** - P is transmitter output power in Watts

*** - Equivalent field strength limit was calculated from maximum allowed ERP of spurious as follows:
 $E = \sqrt{30 \times P \times 1.64} / r$, where P is ERP in Watts, 1.64 is numeric gain of ideal dipole and r is antenna to EUT distance in meters

7.1.2 Test procedure for spurious emission field strength measurements in 9 kHz to 30 MHz band

7.1.2.1 The EUT was set up as shown in Figure 7.1.1, energized and the performance check was conducted.

7.1.2.2 The specified frequency range was investigated with antenna connected to spectrum analyzer. To find maximum radiation the turntable was rotated 360° and the measuring antenna was rotated around its vertical axis.

7.1.2.3 The worst test results (the lowest margins) were recorded in Table 7.1.2 and shown in the associated plots.

7.1.3 Test procedure for spurious emission field strength measurements above 30 MHz

7.1.3.1 The EUT was set up as shown in Figure 7.1.2, energized and the performance check was conducted.

7.1.3.2 The specified frequency range was investigated with antenna connected to spectrum analyzer. To find maximum radiation the turntable was rotated 360° and the measuring antenna height was swept from 1 to 4 m in both, vertical and horizontal, polarizations.

7.1.3.3 The worst test results (the lowest margins) were recorded in Table 7.1.2 and shown in the associated plots.

Hermon Laboratories is accredited by A2LA for calibration according to present requirements of ISO/IEC 17025 and NCSL Z540-1. The accreditation is granted to perform calibration of parameters that are listed in the Scope of Hermon Laboratories Accreditation.

Hermon Laboratories calibrates its reference and transfer standards by calibration laboratories accredited to ISO/IEC 17025 by a mutually recognized Accreditation Body or by a recognized national metrology institute. All reference and transfer standards used in the calibration system are traceable to national or international standards.

In-house calibration of all test and measurement equipment is performed on a regular basis according to Hermon Laboratories calibration procedures, manufacturer calibration/verification procedures or procedures defined in the relevant standards. The Hermon Laboratories test and measurement equipment is calibrated within the tolerances specified by the manufacturers and/or by the relevant standards.
