# FCC CERTIFICATION TEST REPORT

for

# SDI TECHNOLOGIES INC.

# Bookshelf Audio System for your iPod

Model Number: iH52RC (color of the cabinets are different)

Prepared for : SDI TECHNOLOGIES INC.

Address : 504-6 Harbour center, Tower 2, 8 Hok Cheung St.,

Hung Hom, Kowloon, Hong Kong

Prepared By : NS Electromagnetic Technology Co., Ltd.

Address : Chenwu Industrial Zone, Houjie Town, Dongguan City,

Guangdong, China

Tel: 86-769-85935656 Fax: 86-769-85991080

Report Number : NSE-F0607136 Date of Test : Jul. 06,2006 Date of Report : Jul. 10,2006

# NS Electromagnetic Technology Co., Ltd.

**Applicant:** SDI TECHNOLOGIES INC. **Address:** 504-6 Harbour center, Tower 2, 8 Hok Cheung St., Hung Hom, Kowloon, Hong Kong DONGGUAN FINEMOST ELECTRONICS CO.,LTD **Manufacturer:** Address: Sheung Kok Industry Dist, Chang An Chen, Dongguan City, Guangdong, China E.U.T: Bookshelf Audio System for your iPod iH52RC (color of the cabinets are different) **Model Number: Trade Name:** iHome **Serial No.:** Jul. 01, 2006 **Date of Test:** Jul. 06, 2006 **Date of Receipt: Test Specification:** FCC Part 15: February, 2006 ANSI C63.4:2003 The equipment under test was found to be compliance with the requirements of **Test Result:** the standards applied. **Issue Date: Jul. 10, 2006** Tested by: Reviewed by: Approved by: Kelly / Engineer Chris Du / Supervisor Steven Lee / Manager **Other Aspects:** None. Abbreviations: OK/P=passed fail/F=failed n.a/N=not applicable E.U.T=equipment under tested This test report is based on a single evaluation of one sample of above mentioned products, It is not permitted to be duplicated in extracts without written approval of NS Electromagnetic Technology Co., Ltd..

# 1. GENERAL PRODUCT INFORMATION

### 1.1. Product Function

Refer to Technical Construction Form and User Manual.

# 1.2. Description of Device (EUT)

Description : Bookshelf Audio System for your iPod

Model No. : iH52RC System Input Voltage : DC 3V

### 1.3. Difference between Model Numbers

**Notes:** The products are different only for the cabinets' color. But the components are identical.

# 1.4.Independent Operation Modes

The basic operation modes are:

1.4.1. TX 433.7MHz

### 2. TEST SITES

### 2.1. Test Facilities

EMC Lab : Certificated by TUV Rheinland, Germany.

Date of registration: July 28, 2003

Certificated by FCC, USA Registration No.: 897109

Date of registration: October 10, 2003

Certificated by VCCI, Japan

Registration No.: R-1798 & C-1926 Date of registration: January 30, 2004

Certificated by CNAL, CHINA

Registration No.: L1744

Date of registration: November 25, 2004

Certificated by Intertek ETL SEMKO

Registration No.: TMP-013

Date of registration: June 11, 2005

Certificated by TUV/PS, Hong Kong Date of registration: December 1, 2005

Certificated by Industry Canada

Registration No.: 5936

Date of registration: March 24, 2006

Name of Firm : NS Electromagnetic Technology Co., Ltd.

Site Location : Chenwu Industrial Zone, Houjie Town, Dongguan City,

Guangdong, China

# 2.2. List of Test and Measurement Instruments

### 2.2.1. For conducted emission test

| Equipment       | Manufacturer    | Model No. | Serial No. | Last Cal. | Next Cal. |
|-----------------|-----------------|-----------|------------|-----------|-----------|

| Spectrum Analyzer | Agilent         | E4403B    | E1S1001    | Jan.13,06 | Jan.13,07 |
| Amplifier         | Agilent         | 8449B     | E1A2002    | Jan.27,06 | Jan.27,07 |

### 2.2.3. For bandwidth test

| Equipment         | Manufacturer | Model No. | Serial No. | Last Cal. | Next Cal. |
|-------------------|--------------|-----------|------------|-----------|-----------|
| Spectrum Analyzer | HP           | 8563A     | 3417A01296 | Mar.15,06 | Mar.15,07 |
| Bilog Antenna     | EMCO         | 3142B     | 00022050   | May 2,06  | May 2,07  |

### 2.2.4. For transmission cessation from Time-of-Release test

| Equipment         | Manufacturer | Model No. | Serial No. | Last Cal. | Next Cal. |
|-------------------|--------------|-----------|------------|-----------|-----------|
| Spectrum Analyzer | HP           | 8563A     | 3417A01296 | Mar.15,06 | Mar.15,07 |
| Bilog Antenna     | EMCO         | 3142B     | 00022050   | May 2,06  | May 2,07  |

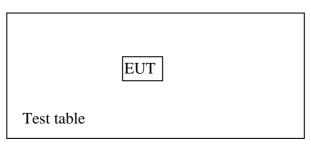

# 3. TEST SET-UP AND OPERATION MODES

# 3.1. Principle of Configuration Selection

**Emission:** The equipment under test (EUT) was configured to measure its highest possible radiation level. The test modes were adapted accordingly in reference to the Operating Instructions.

## 3.2. Block Diagram of Test Set-up

System Diagram of Connections Between EUT and Simulators

(EUT: Bookshelf Audio System for your iPod)

Note: we test lie orientation, side orientation and stand orientation. The lie orientation is the worst mode, so only the worst mode test data was included in the report.

## 3.3. Test Operation Mode and Test Software

Refer to Test Setup in clause 4 & 5.

# 3.4. Special Accessories and Auxiliary Equipment None.

# 3.5. Countermeasures to Achieve EMC Compliance None.

# 4. EMISSION TEST RESULTS

### 4.1. Conducted Emission Test

According to paragraph(f) of FCC Part 15 Section 15.207, measurements to demonstrate compliance with the conducted limits are not required for devices which only employ battery power for operation, and which do not operate from the AC power lines or contain provision for operation while connected to the AC power.

### 4.2. Radiated Emission Test

Test Standard:

FCC Part 15:2005, Subpart C (Section:15.205)

FCC Part 15:2005, Subpart C (Section:15.209)

FCC Part 15:2005, Subpart C (Section:15.231(b))

According to 15.231 the field strength of emissions from intentional radiators operated under these frequencies bands shall not exceed the following:

| Fundamental     | Field Strength            | of Fundamental | Field Strength of Spurious |            |  |
|-----------------|---------------------------|----------------|----------------------------|------------|--|
| Frequency(MHz ) | uV/meter dBuV/meter uV/me |                | uV/meter                   | dBuV/meter |  |
| 40.66 - 40.70   | 2250                      | 67             | 225                        | 47         |  |
| 70 -130         | 1250                      | 62             | 125                        | 42         |  |
| 130 - 174       | 1250 to 3750              | 62 to 71.5     | 125 to 375                 | 42 to 51.5 |  |
| 174 - 260       | 3750                      | 71.5           | 375                        | 51.5       |  |
| 260 - 470       | 3750 to 12500             | 71.5 to 82     | 375 to 1250                | 51.5 to 62 |  |
| Above 470       | 12500                     | 82             | 1250                       | 62         |  |

Note: (1) Where F is the frequency in MHz,the formulas for calculating the maximum permitted fundamental field strengths are as follows: for the band 130-174MHz,uV/m at 3 meters = 56.81818(F) - 6136.3636; for the band 260-470MHz,uV/m at 3 meters = 41.6667(F) - 7083.333. The maximum permitted unwanted emission level is 20dB below the maximum permitted fundamental level.

(2) The above field strength limits are specified at a distance of 3 meters. The tighter limits apply at the band edges. Emissions radiated outside of the specified bands, shall be according to the general radiated limits in 15.209 as following:

| Frequencies | Field strength | Measurement distance |
|-------------|----------------|----------------------|
| (MHz)       | uV/meter       | (meters)             |
| 0.009-0.490 | 2400/F(kHz)    | 300                  |
| 0.490-1.705 | 24000/F(kHz)   | 30                   |
| 1.705-30.0  | 30             | 30                   |
| 30-88       | 100            | 3                    |
| 88-216      | 150            | 3                    |
| 216-960     | 200            | 3                    |
| Above 960   | 500            | 3                    |

As shown in 15.35(b), for frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition fo modulation.

# Frequency Range of Radiated Measurement

(For unintentional radiators)

| Highest frequency generated or Upper frequency of measurement used in the device or on which the device operates or tunes(MHz) | Range(MHz)   |
|--|--|
| Below 1.705  | 30   |
| 1.705-108  | 1000   |
| 108-500  | 2000   |
| 500-1000   | 5000   |
| Above 1000   | 5 <sup>th</sup> harmonic of the highest frequency or 40GHz,whchever is lower |

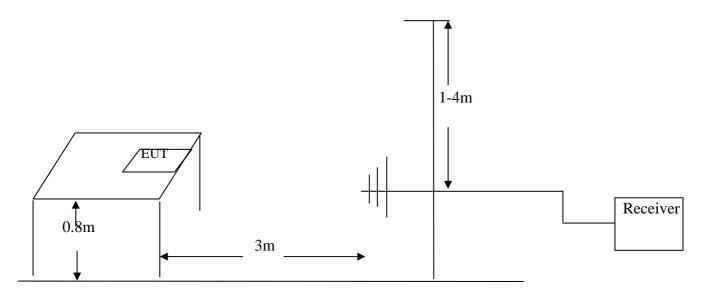

### 4.2.1 Test Produce

The EUT was placed on a turn table which was 0.8 meter above ground. The turn table can rotate 360 degrees to determine the position of the maximum emission level. The EUT was set 3 meters away from the receiving antenna which was mounted on a antenna tower. At the frequency of  $30 \, \text{MHz} \sim 1000 \, \text{MHz}$ , the measuring antenna moved up and down to find out the maximum emission level. It moved from 1 to 4 m for horizontal and vertical polarizations. The broadband antenna was used as a receiving antenna. At the frequency of  $1 \, \text{GHz}$ - $5 \, \text{GHz}$ , the measuring antenna stands  $1 \, \text{m}$  for horizontal and vertical polarizations. The horn antenna was used as a receiving antenna.

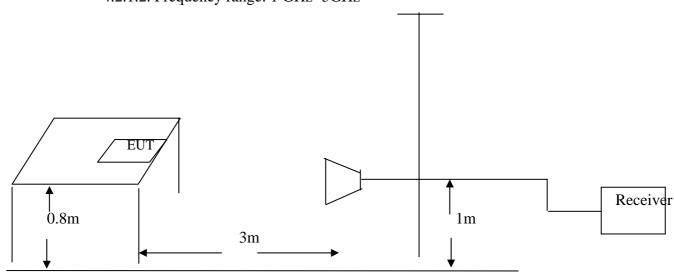

The bandwidth setting on the test receiver was 120 KHz(30 MHz $\sim$ 1000MHz). The bandwidth setting on the test receiver was 1MHz(1 GHz $\sim$ 5GHz).

# 4.2.2 Test Setup Digram

# 4.2.1.1. Frequency range: 30MHz-1000MHz

# 4.2.1.2. Frequency range: 1 GHz -5GHz

### 4.2.3. Test Result

4.2.3.1. Frequncy range: 30 MHz -1000MHz

| EUT:       | Bookshelf Audio System for your | Temperature:   | <b>25</b> ℃ |

| 03   | 342.340   | 15.74   | 3.07  | 2.37      | 21.18          | -24.82 | 46.00  | V        | QP       |
| 04   | 433.765   | 16.64   | 3.55  | 47.09     | 67.28          | -33.54 | 100.82 | V        | Peak     |
| 04   | 433.765   | 16.64   | 3.55  | 30.95     | 51.14          | -29.68 | 80.82  | V        | Average  |
| 05   | 644.980   | 20.44   | 4.63  | 13.45     | 38.52          | -7.48  | 46.00  | V        | QP       |
| 06   | 867.520   | 21.17   | 6.14  | 35.00     | 63.31          | -17.51 | 80.82  | V        | Peak     |
| 06   | 867.520   | 21.17   | 6.14  | 18.62     | 46.93          | -13.89 | 60.82  | V        | Average  |

Remark: The worst emission was detected at 867.530MHz with corrected signal level of  $56.76dB\mu V/m$  (Limit is  $60.82dB\mu V/m$ ) when the antenna was at Horizontal polarization and at 1.3m high and the turn table was at  $0^{\circ}$ .

Notes: 1. Emission Level = Antenna Factor + Cable Loss + Meter Reading

- 2. 0  $^{\circ}$  was the table front facing the antenna. Degree was calculated from 0  $^{\circ}$  clockwise facing the antenna.
- 3.Over Limits = Emission Level Limits
- 4. Test uncertainty:  $\pm 4.76$ dB at a level of confidence of 95%
- 5.The average value of fundamental frequecy is : Average = Peak value +20log(Duty cycle)

 $20\log(\text{Duty cycle}) = 20\log(\text{dwell time}/100\text{ms}) = 20\log[7.74+16*0.5]/100\text{ms} = -15.70\text{dB}$  Please see page 17 and 18 for plotted duty

| 06   | 4675.300  | 5.91          | 39.71          | -14.29      | 54.00          | V        | Average  |

Remark: The worst emission was detected at 1301.250MHz with corrected signal level of  $48.66dB\mu V/m$  (Limit is  $54~dB\mu V/m$ ) when the antenna was at Horizontal polarization and the turn table was at  $0^{\circ}$ .

Notes: 1. Emission Level = Antenna Factor + Cable Loss + Meter Reading

- 2. 0  $^{\circ}$  was the table front facing the antenna. Degree was calculated from 0  $^{\circ}$  clockwise facing the antenna.
- 3. Over Limits = Emission Level Limits
- 4. Test uncertainty:  $\pm 4.76$ dB at a level of confidence of 95%
- 5. The average value of fundamental frequecy is :

Average = Peak value  $+20\log(\text{Duty cycle})$ 

 $20\log(\text{Duty cycle}) = 20\log(\text{dwell time}/100\text{ms}) = 20\log[7.74+16*0.5]/100\text{ms} = -15.70\text{dB}$  Please see page 17 and 18 for plotted duty

# 4.3. Bandwidth Test (20dB Occupied Bandwidth Measurement)

### 4.3.1 Limits of Band:

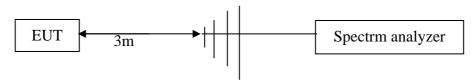

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for device operating above 70MHz and below 900MHz.

### 4.3.2 Teat Procedure:

The EUT was placed on a turn table was 0.8meter above ground.

The signal was coupled to the speeturm analyzer through an antenna.

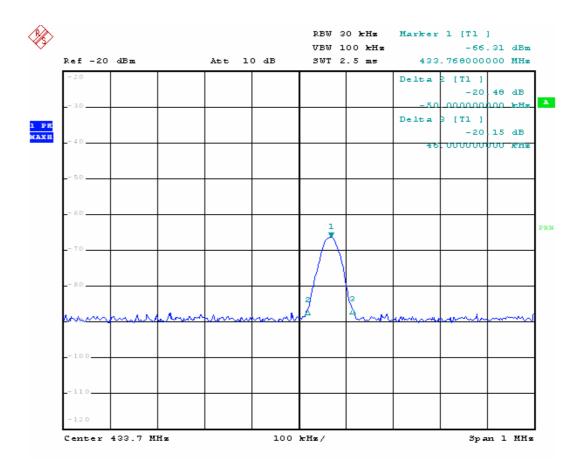

### 4.3.3 Test Set-up:

### 4.3.4 Test Result:

| Frequency (MHz) | 20dB bandwidth (KHz) | Maximum Limit (KHz) | Pass/Fail |
|-----------------|----------------------|---------------------|-----------|
| 433.768         | 96                   | 1084.420            | Pass      |

### 4.3.5 The plot of test result is attached as below:

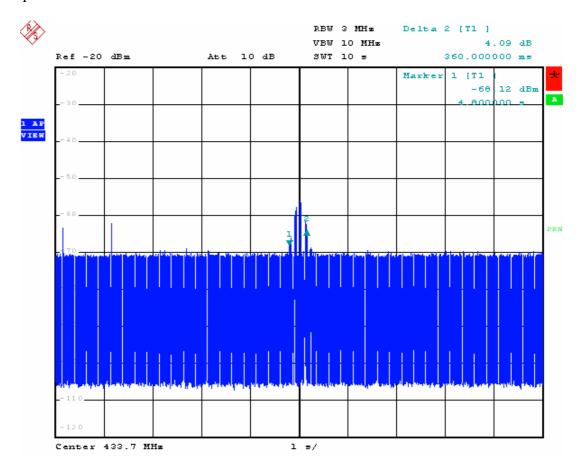

### 4.4. Transmission Cessation from Time-of-Release Test

### 4.4.1 Test Standard:

FCC Part 15: 2005, Subpart C (Section: 15.231(a)):

According A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being release.

The plot of test result is attached as below:

### 4.4.2 Test Result:

| Transmission     | Actual Transmission | Pass / Fail |
|------------------|---------------------|-------------|
| Limited Time (s) | Time (s)            |             |
| €5               | 0.36                | Pass        |
