Subject: 5G FR1 (Sub-6GHz) OTT VoIP HAC Attestation
FCC ID: IHDT56AA4

To Whom It May Concern,

This handset is designed to exhibit similar audio intensity levels between OTT VoIP calls over 4G LTE data connections, OTT VoIP calls over 5G FR1 data connections, voice call over VoLTE connection and a voice call over 5G FR1 connection.

The results using ABM1 values obtained from connections over LTE bands for OTT VOIP and from VoLTE connections over LTE bands for VONR and using ABM2 values for 5G FR1 connections over the same bands, while maintaining a S+N/N margin of 3db or greater from the rating threshold is a reasonable representation of the HAC rating over these 5G FR1 connections.

Should you have any questions comments about the above, please contact the undersigned.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jeff Narducci', written over a horizontal line.
