Silver Manufactory Holdings Co., Ltd.

Technical description:

This is a 27.145MHz radio control car transmitter. There are two control buttons on the transmitter. One button is used to control the RC car to move forward and the other is used to control the RC car to move backward. A 300Hz / 1900Hz square wave will be generated and used to modulate the 27.145MHz frequency. This modulated 27.145MHz frequency will be routed to a 27.145MHz band pass filter to eliminate the spurious signal and finally sent to the antenna via the antenna matching circuit.
