

Exhibit 11
RF Exposure Information

RF Exposure Information

The LoCate (NJILOCA01) falls under Part **2.1091** Radio Frequency Radiation Exposure Evaluation: mobile devices. The rules (2.1091(c)) require that frequencies generated below 1.5MHz and above 1.5 Watts (ERP) must be evaluated to the maximum permissible exposure requirement.

The LoCate (NJILOCA01) transmitter falls into the frequency range of this part. The MPE requirement would not apply to this unit as the maximum rated transmitted power is 0.6 Watts (ERP). This is verified in section 4.1 of the report c05e2295-1 contained as part of this application.
