User Manual

Operating Manual

Globlink Technology Inc.

A wireless keyboard is different from keyboard with wire connection. Please read the installation instructions carefully, to get acquainted with wireless devices.
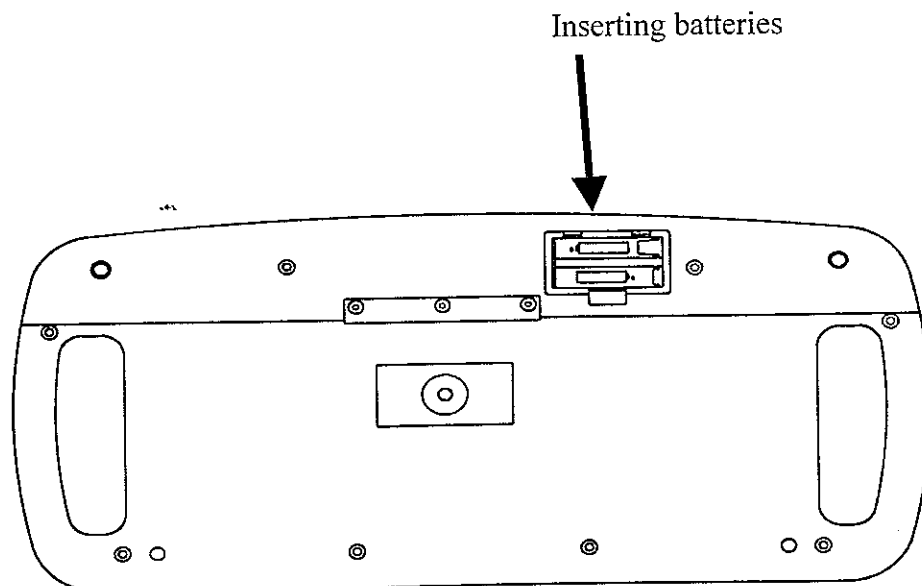

Hardware Installation:

1. Switch the computer OFF and connect the receiver unit to PS/2 ports on computer. Connect Touch Pad connector (green color) first, then Keyboard connector (purple color).

   ● Note : Do not connect or disconnect the receiver unit while the computer is in operation. It may damage the computer and/or communication ports.
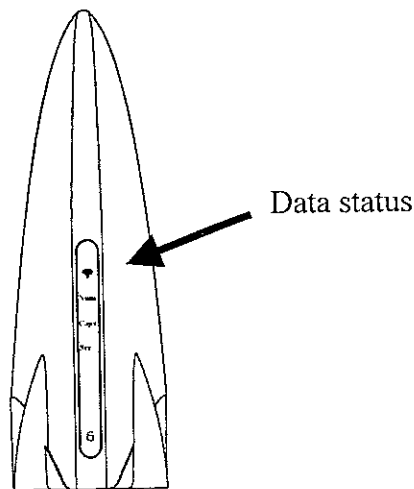

2. Insert Batteries

   The wireless "Freeboard 2F" uses two alkaline AAA batteries. Insert the batteries with the poles in the correct direction.

Inserting batteries

3. Point the keyboard to the receiver within a distance of 1 feet and press any of following keys simultaneously. The "**data status**" LED will blink once. Now, the operation channel is set up. You can use the wireless keyboard now !

|

Operation and trouble shooting:

1. If during normal operation the keyboard is subjected to interference, the   channel should be changed. To do this, just press the "CH" and "Ch1" to "Ch6" keys simultaneously (please refer to above Hardware Installation 4.). If normal operation still is impossible, repeat this procedure until the keyboard operates in a normal way. A total of 6 channels are available for setting.

2. The "**lock**" key of the back of the receiver need to be pressed only, when you don't want to change channel and ID. The "**lock LED**" will light on any time.

Operating environment:

The Freeboard 2F wireless keyboard has a functional operating distance up to 6 feet. Positions of keyboard and receiver may affect the RF transmission performance.
1. Avoid putting keyboard and/or receiver on a steel desk. This may shorten transmission distance.
2. Avoid putting keyboard and/or receiver within 15 cm from computer or bottom part of monitor which may transmit noise interfering RF transmission.
