RE: Com Net Ericsson OWDTR-0005-A Set Aside

I will respond to your questions in order:

- 1.) Identification of this device as fitting into the Occupational/Controlled Exposure Environment was in error. Please see revised RF safety information to be placed in manuals. Please note the different columns for RATED and MEASURED values.
- 2.) Output power on the Form 731 has been corrected to reflect 43.8 actual measured values. Tables for RF safety use this value for calculations.
- 3.) Since a wide array of antennas are available to the final installer, the table shows "MPE Radius" over a wide array of typical antenna gains.
- 4.) The revised "MPE Radius" tables address this concern.
- 5.) We accept your conclusion. We are not sure of its relevance to MPE limits in the Uncontrolled Exposure Environment.
- 6.) We accept your conclusion. We are not sure of its relevance to MPE limits in the Uncontrolled Exposure Environment.

I trust this will answer your questions,

Bill Graff
