MEISIDA ELECTRONIC TOYS CO., LTD

Circuit Description For MSD0386

Battery power supply current from pin 9 to TX2C via R20, when press the key, pin 10 output high level to IC TX2C normal work voltage and supply for Q3, Q4,. Then through Q1, Q3 output isobarically, and Q2, Q1 conducted.

When press the key, oscillations (e.g. Q4, C4, crystal etc.) start working, and output 49MHz carrier wave, at the same time pin 8 of TX2C output coding, via Q3 modulated and then transmit through C1, L1
