Subject: Professional Installation

To whom it may concern

IRU 600v4 is not available to consumers and could not be installed or utilised by consumers. This is a professional, commercial product only. Aviat Networks works closely with commercial customers to decide which product is appropriate for them on a specific route; this product is not a click and buy item and is not available online. Aviat Networks sells these products directly to customers in most instances but also works with some reputable and authorised resellers. This product is in no way intended for, or marketed at, the general public.

IRU 600v4 and all other Aviat Networks radios require professional installation by trained staff as it is not a simple task to align the radios and get the link running effectively. All Aviat Networks products have a GUI that is specific to Aviat that professional installers are trained on. This allows the professional installer to set parameters such as the frequency within the range allowed by the software; the 5.8GHz model is limited to a specific frequency range that respects the band edge emission limits for example.

Installation is controlled as it takes place at restricted locations and is completed by trained members of staff. Installation is completed either by Aviat staff, licenced/trained contractors or trained staff from large customer organisations.

Yours faithfully,

A handwritten signature in black ink that reads 'R. French'.

Ruth French
