To whom it may concern.

Crave Technologies Ltd wishes construct a fiber optic cable link between Lubec, Maine and Campobello Island, New Brunswick.

This new link will enable us to help Roosevelt Campobello International Park, as well as thousands of homes and businesses on both sides of the border. FDR Park has been struggling to provide online programs due to lack of adequate infrastructure to do so.

Currently, we do not intend to serve any clients in the USA. This link will be for a Layer 2 connection between Lubec, Maine and Toronto, Canada. We are not selling any services in the USA.

Crave Technologies Ltd is not seeking to export services via this link to any other country than Canada.

It is in the public interest to grant this application. The Town of Lubec Maine has been seeking to build a new broadband network. They have had limited success due to lack of competition in the area. By granting this application, we will be able to bring in another carrier, Telia.

Thank you for your consideration.

Howard Small
