Dear Ms. Dortch:

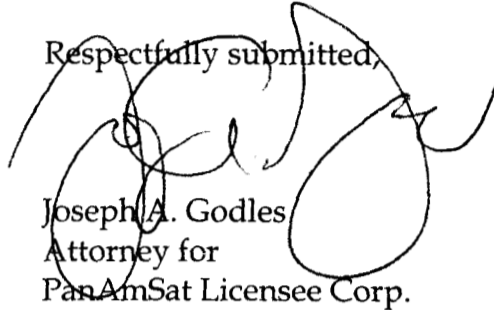

On April 5, 2004, Celsat America, Inc. ("Celsat") submitted a letter to the International Bureau through your office in which it clarified which frequencies Celsat intends to use for telemetry, tracking and control ("TT&C") functions on the above-referenced satellite at 121° W.L. In its letter, Celsat noted it will use C-band frequencies for TT&C during launch operations when the satellite is in transfer orbit and possibly in

contingency operations while in regular orbit. As to either situation, PanAmSat Licensee Corp. ("PanAmSat"), which has an adjacent C-band satellite authorized for use at 123° W.L., asks that Celsat be required to coordinate any proposed use of C-band payload with PanAmSat in advance of any such operations.

Questions with regard to this matter can be directed to the undersigned counsel to PanAmSat.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Joe Godles", is written over the typed name and title.

Joseph A. Godles
Attorney for
PanAmSat Licensee Corp.
