

Exhibit B

Description of Application

SkyTerra Subsidiary LLC (“SkyTerra”) hereby requests authority to extend the MSAT-2 license term, which expires on August 21, 2010, until December 31, 2011, i.e. approximately sixteen months. The next-generation replacement satellite for MSAT-2, SkyTerra 1, is scheduled for launch in the August to October 2010 window and will require several months of testing. Further, SkyTerra estimates that it will take approximately eight months to transition traffic from MSAT-2 to SkyTerra 1. Accordingly, an extension of the MSAT-2 license term is necessary to maintain continuity of service to customers.

Apart from the changes already proposed in the modification application this filing amends, SkyTerra proposes no changes to the current operations of MSAT-2 and incorporates by reference the most recent technical parameters for the satellite on file with the Commission.¹ The proposed extension does not impact the orbital debris mitigation plan for the satellite. SkyTerra has confirmed that at the conclusion of the requested extension period MSAT-2 will have sufficient fuel to de-orbit to a disposal altitude that complies with the Inter-Agency Space Debris Coordination Committee standard, as stated in the MSAT-2 orbital debris mitigation plan.² For the above reasons, SkyTerra submits that grant of this application serves the public interest.
