Re: Application of Norris Satellite Communications to Construct two, and launch and operate a Ka-band Communications Satellite, File Nos. 54-DSS-P/L-90 and 55-DSS-P-90.

Dear Ms. Searcy:

The purpose of this letter is to ask the Commission to proceed with the processing of the above-referenced application, limiting the Commission's consideration to the applicant's request, within its application, "to the fixed-satellite service, subject to revision of the authorization at a later date." Application, p. I-9. The Applicant, in including this statement, considered the possibility that "the Commission [might] require additional time to evaluate Norris's frequency reallocation proposal." The applicant is ready, willing and able to proceed with the construction and operation of Ka-band communications satellites providing services permitted in the domestic fixed-satellite service and further, believes it is in the public interest for the Commission to enable the commercial introduction of satellite communications in this frequency band by acting expeditiously on the application.

In support of this request, the Applicant is submitting as an attachment to this letter, a revised Exhibit I-E, Income Statement, which demonstrates that the Applicant can obtain the needed revenue from services it would be permitted to provide with a domestic fixed-satellite authorization. This revised Income Statement supports the assertion, at page I-30 of the application, that "Revenues from lease reservations and the sale of transponders on the proposed NorStar I are projected to reach a total of \$630 million for the life of the satellite." The Applicant is confident that it can achieve the necessary revenues through the offering of services permitted in the domestic fixed-satellite service.

In addition, the Applicant is submitting an interference analysis which demonstrates the feasibility of operating the proposed spacecraft two degrees from adjacent spacecraft with similar technical characteristics operating in the Ka-band. As the spacecraft design in the application is of the "bent-pipe" variety, no change is required to the technical description of the facility to enable it to provide fixed-satellite service from the entire communications capacity. This interference analysis should assure the Commission that

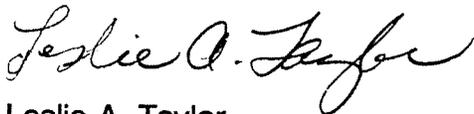

satellites operating in the Ka-band can operate in such a manner as to accommodate numerous other Ka-band satellites in the orbital arc, thus promoting the Commission's goals of open entry and competition.

Finally, the Applicant requests that, upon the Commission's acting on its request to provide domestic fixed-satellite services, that the remainder of its application, addressing the provision of any services that may be authorized in the "General Satellite Service," be held pending the Commission's action pursuant to its rulemaking request, RM-7511, to create a General Satellite Service. The Applicant notes that the Commission adopted its proposal for a General Satellite Service in the 19.5-20.2 GHz and 29.5-30.0 GHz bands within its proceedings developing United States' positions for the 1992 World Administrative Radio Conference. See, In the Matter of an Inquiry Relating to Preparation for the International Telecommunication Union World Administrative Radio Conference for Dealing with Frequency Allocations in Certain Parts of the Spectrum, 6 FCC Rcd 3900, released June 20, 1991. This proposal was included in the United States proposals for the Conference. See, United States Proposals for the 1992 World Administrative Radio Conference for Dealing with Frequency Allocations in Certain Parts of the Spectrum, U.S. Department of State, Washington, D.C., July, 1991. Thus, after the Commission concludes a rulemaking on the subject of the General Satellite Service, it should revisit the requests for authorization to operate in that service contained in Applicant's application.

The Applicant believes that the above, together with the attachments to this letter, provide sufficient information for the Commission to act on its application to construct and operate satellites in the domestic fixed-satellite service. Norris Satellite Communications, Inc. respectfully requests the Commission to move forward expeditiously in the processing of this portion of its application.

If there any questions with respect to this matter, or as to the application, please contact the undersigned.

Sincerely yours,

Leslie A. Taylor

October 04, 1991

## 1.0 Introduction

Being one of the first Ka-Band satellite's proposed to the FCC (the other being the ACTS satellite, 10 degrees away), the model used for interference into the NorStar satellite assumes that 1 "almost" identical satellite exists at a 2 degree spacing. Thus, the identical satellite is the only source of interference. Table A lists the traffic characteristics for NorStar in the format used by the G. Sharp adjacent satellite interference evaluation program. These characteristics were based upon the Application\*, except for the last 4 signal types which were taken from a comparable Ku-band (12/14 GHz) RCA satellite (see Table B). The single entry interference objective was set to "program determination". In this mode, criteria used are those recommended by the Reduced Orbital Spacings Advisory Committee in its Phase I Report dated September 1985. In addition, the following sequence of choices were made during the interactive part of the program:

1,y,2,3,1,2.,4,2.,20.,norstar.par,1,8

Table C presents an essential part of the output of the G. Sharp interference evaluation program for the above input (the entire output as it appears in files summary.dom and detail.dom is provided in the Appendix). In all cases, the adjacent satellite is assumed to be cross-polarized with the nominal one (7th choice in above sequence), and this is the only source of disparity between the two. The values listed in the table are the margin by which the interference from the "almost" identical NorStar is below the "program determined" objectives. The traffic types shown numerically are as listed in Table A.

## 2.0 Results

As can be seen from these tables, only 17.9% of the combinations show a negative margin. For these cases, if necessary, Norris will further coordinate between these systems.

If, after the awarding of this Application, the neighbors of NorStar are different from that assumed here, the above analysis will be updated to include the traffic modes and characteristics of the actual Ka-Band neighboring systems.

\* Uplink transmit power (dBw) = 8 (clear sky) or 23 (rain), with rain chosen.

Satellite receive antenna gain (dBi) = 30 (Conus reception) or 45 (spot beam), with CONUS chosen. A small amount of power from 1 or 2 beams will be used to feed spot beams to Alaska & Hawaii. No additional spot beams to earth are proposed in the Application.

Table C

## APPENDIX

**SUMMARY.DOM**

Table 1: Domestic Satellite R.F. Carrier Listing - 30/18 GHz

| Carrier Number | Signal Type & (channels) | Bandwidth (MHz) | E.S. Antennas (m) up/down | EIRP (dBW) up/down |
|----------------|--------------------------|-----------------|---------------------------|--------------------|
| 1: NRSc        | CFDM/FM (3800)           | 54.000          | 4.0/ .9                   | 83.0/55.1          |
| 2: NRSw        | TV/FM (1)                | 24.000          | 4.0/ .9                   | 83.0/55.1          |
| 3: NRSw        | TV/FM (1)                | 24.000          | 4.0/ .9                   | 83.0/55.1          |
| 4: NRSe        | TV/FM (1)                | 24.000          | 4.0/ .9                   | 83.0/55.1          |
| 5: NRSe        | TV/FM (1)                | 24.000          | 4.0/ .9                   | 83.0/55.1          |
| 6: NRSc        | TV/FM (1)                | 30.000          | 4.0/ .9                   | 83.0/55.1          |
| 7: NRSc        | TV/FM (1)                | 24.000          | 4.0/ .9                   | 83.0/55.1          |
| 8: NRSc        | TV/FM (2)                | 26.000          | 4.0/ .9                   | 83.0/55.1          |
| 9: NRSc        | TV/FM (2)                | 26.000          | 4.0/ .9                   | 83.0/55.1          |
| 10: NRSc       | QPSK/ 80 MBPS            | 45.714          | 4.0/ .9                   | 83.0/55.1          |
| 11: NRSc       | QPSK/ 1.544 MBPS ( 20)   | 1.029           | 4.0/ .9                   | 55.6/55.1          |
| 12: NRSc       | BPSK/ 56 KBPS ( 100)     | .064            | 4.0/ .9                   | 55.6/55.1          |
| 13: NRSc       | BPSK/ 56 KBPS ( 400)     | .064            | 4.0/ .9                   | 49.6/55.1          |
| 14: NRSc       | SCPC/FM ( 500)           | .037            | 4.0/ .9                   | 43.7/55.1          |

SPECTRA ASSUMED FOR INTERFERENCE INTO SCPC & PSK

TV/FM: FLAT YELLOW SPECTRAL MASKS

FDM/FM: GAUSSIAN, EXCEPT FOR THOSE MARKED WITH "+" UNDER SIGNAL TYPE

\* INDICATES SCPC AND SMALL FDMA CARRIERS WHOSE TRANSPONDER FREQUENCY PLANS AVOID +/- 2.0 MHz AT THE TRANSPONDER CENTER.

"PLAN" UNDER CHANNEL SPACING INDICATES A FIXED FREQUENCY PLAN.

THERMAL NOISE SUMMARY

\* PATH LOSSES INCLUDE FREE SPACE LOSS FOR A 20 DEGREE ELEVATION ANGLE, CLEAR SKY ATMOSPHERIC LOSSES, AND ANTENNA POINTING LOSSES IN THE RANGE OF 0.0-0.5 dB. POINTING LOSSES ARE INCLUDED ONLY FOR THE THERMAL NOISE C/N, NOT IN INTERFERENCE CALCULATIONS.

UPLINK LOSSES = 207.6 + .2 dB + Pointing Loss  
 DOWNLINK LOSSES = 205.9 + .2 dB + Pointing Loss

+ THE TV/FM INTERFERENCE OBJECTIVE IS EITHER THE S/I OR C/I VALUE(S) WITHOUT THE "=" THE VALUE(S) WITH THE "=" ARE FOR COMPARISON ONLY. IF THE S/I HAS THE "=", THEN THE C/I OBJECTIVE IS USED AND THE S/I IS THE EQUIVALENT LEVEL FROM A CO-CHANNEL TV/FM INTERFERER. IF THE C/I HAS "=", THEN THE S/I OBJECTIVE IS USED AND THE C/I IS INDICATE THE EQUIVALENT SINGLE ENTRY LEVELS IN FOR A NOISE-LIKE INTERFERER (C/I<sub>n</sub>) AND FOR A CO-CHANNEL TV/FM

INTERFERER (C/I<sub>tv</sub>). CCIR Rec. 500-1 IMPAIRMENT GRADES ARE GIVEN FOR THE AGGREGATE TV/FM  
C/I = C/I<sub>tv</sub> - 4 dB INTO A "REASONABLY CRITICAL STILL SCENE". THE IMPAIRMENT GRADES ARE:

- 5.0 = IMPERCEPTIBLE (Never achieved)
- 4.6 = JUST PERCEPTIBLE OR JUST UNPERCEPTIBLE (Highest achievable grade)
- 4.3 = APPROXIMATE GRADE FOR CATV AGGREGATE OBJECTIVE OF 18 dB
- 4.0 = PERCEPTIBLE, BUT NOT ANNOYING
- 3.0 = SLIGHTLY ANNOYING
- 2.0 = ANNOYING
- 1.0 = VERY ANNOYING

COMBINATIONS FAILING TO MEET SINGLE ENTRY INTERFERENCE OBJECTIVES (dB)
