

**Exhibit D**  
**Response to Question 42**  
**Non-U.S. Operating Authority**

By this application, ViaSat, Inc. (“ViaSat”) seeks a radiofrequency license from the Commission for the Ka-band telemetry transmitter and command receiver on the ViaSat-1 satellite, as well as for the autotrack and downlink beacons. Because those telemetry, tracking, and command (“TT&C”) elements will be U.S. licensed, ViaSat has answered “No” to question 42a.

As explained in greater detail in Exhibit E, ViaSat holds authority to serve the U.S. market using the Ka-band communications payload on ViaSat-1. That communications payload will be operated under the authority of the Isle of Man and, ultimately, the United Kingdom. ViaSat-1 would be U.S. licensed with respect to its TT&C elements following grant of the instant application.
