Re: File No. SAT-MOD-20050301-00054, Globalstar Ancillary Terrestrial Component ("ATC") Application

Dear Ms. Dortch:

This letter supplements Globalstar's October 14, 2005, *ex parte* filing in the above-referenced application proceeding by providing further clarification for the record concerning the agreement reached between Globalstar and the National Telecommunications and Information Administration ("NTIA") on the out-of-band limits on emissions from Globalstar's Ancillary Terrestrial Component ("ATC") terminals into the Radionavigation Satellite Service ("RNSS") band at 1559-1610 MHz. Following further discussions with NTIA, on November 9, 2005, Globalstar agreed to meet the following near- and long-term emission limits applicable to its ATC mobile terminals:

Globalstar ATC mobile terminals placed into service prior to 2012 will comply with the unwanted emission limits shown in Table 1.

Table 1

Frequency (MHz)	ATC Mobile Terminal EIRP Density	
	dBW/MHz	dBW/kHz
1605-1610	-85 to -42 level determined by linear interpolation	-95 to -52 level determined by linear interpolation
1600-1605	-85	-95
1590-1600	-90 to -85 level determined by linear interpolation	-100 to -95 level determined by linear interpolation
1559-1590	-90	-100

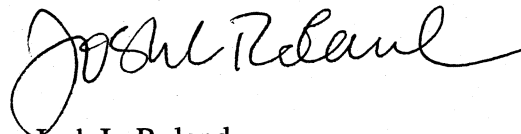

Globalstar ATC mobile terminals placed into service after 2012 will comply with the unwanted emission limits shown in Table 2.

Table 2

Frequency (MHz)	ATC Mobile Terminal EIRP Density	
	dBW/MHz	dBW/kHz
1605-1610	-95 to -47 level determined by linear interpolation	-105 to -57 level determined by linear interpolation
1559-1605	-95	-105

Should there be any questions concerning this matter, please contact the undersigned.

Respectfully submitted,

Josh L. Roland
