Subject: Lightsquared filing

Dear Mr. Genachowski,

Please do not issue final permits to Lightsquared to operate a ground-based broadband network in its authorized mobile satellite service spectrum. This technology has been determined (by Lightsquared's own study) to interfere with high precision GPS. We need the efficiencies that come with these high precision devices to provide us with authoritative spatial data with higher accuracy at a lower cost. Until a solution can be found to block or filter the interference, you should not allow them to proceed.

Sincerely,

Howard Ward, President, GISP
