In the Matter of

Intelsat License LLC

Application to Modify Authorization for
Intelsat 902 (S2406)

File No. SAT-MOD-_____

APPLICATION TO MODIFY AUTHORIZATION FOR INTELSAT 902

Intelsat License LLC (“Intelsat”), pursuant to Section 25.117 of the rules of the Federal Communications Commission (“FCC” or “Commission”),¹ hereby seeks to modify the authorization for the Intelsat 902 satellite (S2406).² Intelsat 902 is a C-/Ku-band satellite licensed to operate at the 50.1° W.L. orbital location with a 0.1° station-keeping tolerance.³

Specifically, Intelsat requests authority to operate the satellite with a C-band coverage area different than that described in the Schedule S provided in the *IS-902 Grant*.⁴ The requested coverage is demonstrated in Attachment A. All other information previously provided for the

¹ 47 C.F.R. § 25.117. In accordance with the requirements of the Commission’s rules, this application has been filed electronically as an attachment to FCC Form 312. *Id.*

² The Commission’s rules permit extension and modification applications in the 3700-4200 MHz band, and these applications are not subject to the FCC’s 2018 filing freeze on new fixed satellite service space station applications. *See* 47 C.F.R. § 2.106 n. NG182; *International Bureau Announces Temporary Filing Freeze on New Fixed-Satellite Service Space Station Applications in the 3.7-4.2 GHz Band*, Public Notice, 32 FCC Rcd 6119 (2018).

³ *See Application of Intelsat License LLC to Modify Intelsat 902 Authorization*, Stamp Grant, ICFS File No. SAT-MOD-20260227-00101 (granted Apr. 29, 2026) (“*IS-902 Grant*”).

⁴ *See Application of Intelsat License LLC to Modify Intelsat 902 Authorization*, Schedule S, ICFS File No. SAT-MOD-20260227-00101 (filed Feb. 27, 2026).

operation of Intelsat 902 at 50.1° W.L. remains unchanged and Intelsat hereby incorporates it by reference.⁵

To achieve the requested coverage, Intelsat seeks limited flexibility to depart from the nominal pointing of Intelsat 902's C-band beams within the envelopes defined by the red lines in the figures provided in Attachment A, which show the composite isoline of the 8 dB below peak contour of all prospective pointings of the beams listed.⁶ These coverages replace those of the listed beams provided in the prior Schedule S GXT files at 50.1° W.L.. The requested flexibility will be obtained by biasing the satellite platform as necessary to optimize the satellite's C-band coverage for customers. The Intelsat 902's C-band reflectors are fixed to the satellite platform, which makes the platform bias flexibility sought herein necessary to achieve the C-band coverage sought herein.⁷

Grant of this modification application will serve the public interest by allowing Intelsat to better meet changing customer requirements at the 50.1° W.L. orbital location and make more efficient use of its on-orbit assets.

⁵ To the extent necessary, Intelsat requests that previously granted waivers of 47 C.F.R. § 25.114(d)(14)(ii) and footnote NG52 of the U.S. Table of Allocations be extended to this modification. *See IS-902 Grant* Conditions 15-16.

⁶ Intelsat has requested Special Temporary Authority to operate Intelsat 902 the coverage described in Attachment A. *See Request of Intelsat License LLC for Special Temporary Authority for Intelsat 902*, ICFS File No. SAT-STA-20260728-00315 (filed Jul. 28, 2026).

⁷ Intelsat is not seeking to change the coverage area of the existing global C-band beams or Ku-band spot-beams.

For the reasons set forth above, Intelsat respectfully requests that the Commission grant this modification application.

Respectfully submitted,

Intelsat License LLC
