Attachment to Grant
IBFS File No. SAT-STA-20120508-00081
Call Sign: S2850

The application of Intelsat License LLC (Intelsat) for special temporary authority, IBFS File No. SAT-STA-20120508-00081, is granted for a period of 30 days, commencing on May 31, 2012. Accordingly, Intelsat is authorized to operate telemetry transmissions (space-to-Earth) using center frequencies of 12253.5 MHz, 12254.0 MHz, 12256.0 MHz, and 12256.5 MHz for launch and early orbit phase (LEOP) operations of the Intelsat 19 space station (Call Sign S2850). In addition, Intelsat is authorized to conduct in-orbit testing (IOT) at 176.0° E.L. in the 3700-4200 MHz (space-to-Earth), 5925-6425 MHz (Earth-to-space), 12250-12750 MHz (space-to-Earth), and 14000-14500 MHz (Earth-to-space) frequency bands, and to operate Telemetry, Tracking, and Control (TT&C) using center frequencies of 12253.5 MHz, 12254 MHz, 12256 MHz and 12256.5 MHz (space-to-Earth), and 14000.5 MHz and 14003 MHz (Earth-to-space) to support IOT operations at the 176.0° E.L. orbital location and to effect Intelsat 19's drift to its authorized location of 166.0° E.L. upon the completion of IOT. This authorization is granted subject to the technical parameters specified in Intelsat's application, the rules of the Federal Communication Commission (Commission), and the following conditions.

1. All operations under this grant of special temporary authority shall be on an unprotected and non-harmful interference basis, *i.e.*, Intelsat shall not cause harmful interference to, and shall not claim protection from interference caused to it by, any other lawfully operating radiocommunication system.
2. In the event of any harmful interference as a result of the operations under this grant of special temporary authority, Intelsat shall cease operations immediately upon notification of such interference and shall immediately inform the Commission, in writing, of such an event.
3. Intelsat shall coordinate the operations of Intelsat 19 with existing geostationary space stations to ensure that no unacceptable interference results from its operations at the 176.0° E.L. orbital location or during drift to the 166° E.L. orbital location.
4. Intelsat 19's operations at 176.0° E.L. shall be limited to IOT and shall not include the provision of commercial services.
5. Intelsat shall operate only the TT&C frequencies on Intelsat 19 during the space station's drift from the 176.0° E.L. orbital location to the 166.0° E.L. orbital location.
6. During in-orbit testing, Intelsat shall maintain the Intelsat 19 space station within an east/west longitudinal station-keeping tolerance of ± 0.05 degrees of the 176.0° E.L. orbital location.
7. Intelsat is granted a waiver of the U.S. Table of Frequency Allocations to permit it to use the 12.25-12.75 GHz frequency band in ITU Region 2 in the space-to-Earth direction during LEOP, IOT, and drift from the 176.0° E.L. orbital location to the 166.0° E.L. orbital location. The U.S. Table of Frequency Allocations allocates the 12.25-12.70 GHz band to Fixed Service (FS) and Broadcast Satellite Service (BSS) (space-to-Earth) and allocates the 12.70-12.75 GHz band to FS, Mobile Service (MS), and Fixed-Satellite Service (FSS) in the Earth-to-space direction only. We find that the limited, short-term operations proposed by Intelsat in the 12.25-12.75 GHz band are unlikely to cause interference to other users of the band and justify a waiver of the U.S. Table of Frequency Allocations in this instance.
8. Upon launch of Intelsat 19, Intelsat shall notify the Commission of the date/time duration that the satellite will be transmitting in the 12.25-12.75 GHz band while in view of the earth stations in Colorado and Maryland that the Commission authorized to communicate with Intelsat 19 during LEOP. *See* IBFS File Nos. SES-STA-20120403-00327 & SES-STA-20120403-00328.
9. Any action taken or expense incurred as a result of operations pursuant to this grant of special temporary authority is at Intelsat's own risk.

Attachment to Grant
IBFS File No. SAT-STA-20120508-00081
Call Sign: S2850

10. Intelsat shall notify the Commission, in writing, within two business days of the commencement of IOT operations that such operations have commenced.
11. This action is issued pursuant to Section 0.261 of the Commission's rules on delegated authority, 47 C.F.R. § 0.261, and is effective immediately.

FCC NOTICE REQUIRED BY THE PAPERWORK REDUCTION ACT

The public reporting for this collection of information is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the required data, and completing and reviewing the collection of information. If you have any comments on this burden estimate, or how we can improve the collection and reduce the burden it causes you, please write to the Federal Communications Commission, AMD-PERM, Paperwork Reduction Project (3060-0678), Washington, DC 20554. We will also accept your comments regarding the Paperwork Reduction Act aspects of this collection via the Internet if you send them to PRA@fcc.gov. PLEASE DO NOT SEND COMPLETED FORMS TO THIS ADDRESS.

Remember – You are not required to respond to a collection of information sponsored by the Federal government, and the government may not conduct or sponsor this collection, unless it displays a currently valid OMB control number or if we fail to provide you with this notice. This collection has been assigned an OMB control number of 3060-0678.

THE FOREGOING NOTICE IS REQUIRED BY THE PAPERWORK REDUCTION ACT OF 1995, PUBLIC LAW 104-13, OCTOBER 1, 1995, 44 U.S.C. SECTION 3507.

8. Description

Intelsat License LLC herein requests a grant of Special Temporary Authority for its Intelsat 19 satellite (call sign S2850) for 30 days, from May 31, 2012 through June 29, 2012, to (1) permit launch and early orbit phase 500 kHz wide telemetry transmissions centered at the 12253.5 MHz, 12254.0 MHz, 12256.0 MHz, and 12256.5 MHz towards Region 2, (2) conduct in-orbit testing at 176.0 E.L. in the 3700-4200 MHz (downlink), 5925-6425 MHz (uplink), 12250-12750 MHz (downlink), and 14000-14500 MHz (uplink) frequency bands, and (3) drift from the 176.0 E.L. IOT location to the 166.0 E.L. permanent location using the telemetry, tracking and command frequencies of the satellite.

Washington, DC 20554

Re: Request for Special Temporary Authority for Intelsat 19,
File No. SAT-RPL-20111222-00245, Call Sign S2850

Dear Ms. Dortch:

Intelsat License LLC (“Intelsat”) herein requests a grant of Special Temporary Authority (“STA”)¹ for its Intelsat 19 satellite (call sign S2850) for 30 days—from May 31, 2012 through June 29, 2012—to (1) permit launch and early orbit phase (“LEOP”) 500 kHz wide telemetry transmissions centered at the 12253.5 MHz, 12254.0 MHz, 12256.0 MHz, and 12256.5 MHz towards Region 2,² (2) conduct in-orbit testing (“IOT”) at 176.0° E.L. in the 3700-4200 MHz (downlink), 5925-6425 MHz (uplink), 12250-12750 MHz (downlink), and 14000-14500 MHz (uplink) frequency bands, and (3) drift from the 176.0° E.L. IOT location to the 166.0° E.L. permanent location using the satellite’s telemetry, tracking and command (“TT&C”) frequencies.³ Intelsat 19 is scheduled to be launched on May 31, 2012. As part of this request, Intelsat seeks a waiver of the U.S. Table of Frequency Allocations to permit LEOP, IOT and drift operations using downlink frequencies in the 12250-12750 MHz band in Region 2.

Request for Special Temporary Authority

LEOP. Intelsat will coordinate LEOP operations for Intelsat 19 with all operators of satellites that use the same frequency bands and are in the

¹ Intelsat has filed this STA request, an FCC Form 159, a \$860.00 filing fee and this supporting letter electronically via the International Bureau’s Filing System (“IBFS”). Intelsat will withdraw its previously filed pending STA request to conduct in-orbit testing (“IOT”) for the Intelsat 19 satellite. *See Request for Special Temporary Authority to Conduct In-Orbit Testing of Intelsat 19*, File No. SAT-STA-20120306-00037 (filed Mar. 6, 2012).

² Intelsat’s application for authority to launch and operate the Intelsat 19 satellite includes a request to operate in the frequencies necessary to conduct LEOP transmissions that are not included in this STA request for the Ku-band downlink. *See Policy Branch Information; Actions Taken*, Report No. SAT-00843, File No. SAT-RPL-20111222-00245 (Feb. 10, 2012) (Public Notice) (“Intelsat 19 Application”).

³ *Intelsat 19 Application*, *supra* note 2.

Ms. Marlene H. Dortch
May 8, 2012
Page 2

LEOP path. As such, there will be no risk of interference with respect to lawfully operating, co-frequency satellites. Nevertheless, all operators of satellites in that path will be provided with an emergency phone number where the licensee can be reached in the event that harmful interference occurs. Specifically, the 24x7 contact information for the Intelsat 19 LEOP mission is as follows:

Ph.: (202) 944-7701- East Coast Operations Center (primary)
(310) 525-5900- West Coast Operations Center (back-up)
Request to speak with Bob Main.

IOT. Intelsat seeks to conduct in-orbit testing of Intelsat 19 at 176.0° E.L. in the 3700-4200 MHz (downlink), 5925-6425 MHz (uplink), 12250-12750 MHz (downlink), and 14000-14500 MHz (uplink) frequency bands. To Intelsat's knowledge, the co-frequency satellites within plus/minus six degrees of 176.0° E.L. are GE-23 at 172.0° E.L., Inmarsat 3-F3 at 178.0° E.L., Intelsat 18 at 180.0° E.L., and Intelsat 602 at 177.85° E.L. Intelsat currently is in coordination discussions with GE Satellite and Inmarsat, Ltd., the operators, respectively, of GE-23 and Inmarsat 3-F3. With regard to the remaining spacecraft, Intelsat will internally coordinate the proposed testing with the operations of these satellites. In the unlikely event that harmful interference occurs, Intelsat will take all necessary steps to eliminate the interference. Intelsat is also not aware of any geostationary space station in Region 2 receiving in the 12700-12750 MHz band.

Intelsat has assessed and limited the probability of the space station becoming a source of debris as a result of collision with large debris or other operational space stations during in-orbit testing at 176.0° E.L. Intelsat 19 will not be located at the same orbital location as another satellite or at an orbital location that has an overlapping station-keeping volume with another satellite. Further, Intelsat is not aware of any other FCC licensed system, or any other system applied for and under consideration by the FCC, having an overlapping station-keeping volume with Intelsat 19. Finally, Intelsat is not aware of any system with an overlapping station-keeping volume with Intelsat 19 that is the subject of an ITU filing and that is either in orbit or progressing towards launch.

Drift. During the drift from 176.0° E.L. to 166.0° E.L., only the satellite's TT&C frequencies will be utilized. Intelsat will coordinate the telemetry (and other TT&C) transmissions of Intelsat 19 with the operator of any other co-frequency satellite that may be in its drift path.

Request for Waiver

In the U.S. Table of Frequency Allocations, the 12250-12700 MHz band is allocated to Fixed Service (“FS”) and Broadcast Satellite Service (“BSS”); the 12700-12750 MHz band is allocated to FS, Mobile Service (“MS”), and uplink Fixed-Satellite Service (“FSS”).⁴ Intelsat seeks a waiver of the U.S. Table of Frequency Allocations to allow use of the 12250-12750 MHz band for downlink Fixed-Satellite Service (“FSS”) in Region 2.

The Commission may grant a waiver for good cause shown.⁵ The Commission typically grants a waiver where the particular facts make strict compliance inconsistent with the public interest.⁶ In granting a waiver, the Commission may take into account considerations of hardship, equity, or more effective implementation of overall policy on an individual basis.⁷ Waiver is therefore appropriate if special circumstances warrant a deviation from the general rule, and such a deviation will serve the public interest.

Good cause exists for waiver to authorize LEOP transmissions and the drift of Intelsat 19 from 176.0° E.L. to 166.0° E.L. because Intelsat’s use of the 12250-12750 MHz band for these purposes will not cause harmful interference to any terrestrial stations or satellites.⁸ Terrestrial stations within the United States will not be subjected to harmful interference from the telemetry transmissions of Intelsat 19 because the satellite’s telemetry carriers are compliant with the International Telecommunication Union (“ITU”) space-to-Earth power flux density (“PFD”) limits over the Earth. Specifically, in order to ensure protection of terrestrial communication links from space station transmissions, Article 21.16 of the ITU Radio

⁴ 47 C.F.R. § 2.106. In Region 2, the International Table of Frequency Allocation allocates the 12250-12500 MHz band to Broadcast Service, BSS, FS, and MS on a co-primary basis; and the 12700-12750 MHz band to FS, MS and FSS (Earth-to-space).

⁵ 47 C.F.R. §1.3.

⁶ *N.E. Cellular Tel. Co. v. FCC*, 897 F.2d 1164, 1166 (D.C. Cir. 1990) (“*Northeast Cellular*”).

⁷ *WAIT Radio v. FCC*, 418 F.2d 1153, 1159 (D.C. Cir. 1969); *Northeast Cellular*, 897 F.2d at 1166.

⁸ See *Intelsat North America LLC, Application for Authority to Modify Earth Station Authorization to Provide Launch and Early Orbit Phase (“LEOP”) Operations for Newly Launched Satellites*, Order and Authorization, 21 FCC Rcd 14672, 14674 (¶ 6) (Int’l Bur. 2006) (“If a proposal will not cause interference to other licensed operations, the Commission generally authorizes it if it is otherwise in the public interest.”).

Regulations imposes PFD limits on satellite transmissions in the space-to-Earth direction.⁹ In the pending Intelsat 19 application, Intelsat calculated the PFD level of its telemetry carriers on the Earth.¹⁰ These calculations show that the Intelsat 19 telemetry transmissions will be compliant with the PFD limits specified in Art. 21.16 of the ITU Radio Regulations.¹¹ Accordingly, terrestrial stations operating in ITU Region 2 will not be subjected to harmful levels of interference from Intelsat 19's telemetry transmission. Moreover, as explained above, space stations operating in the 12250-12750 MHz frequency band will not be impacted because Intelsat will coordinate the telemetry of Intelsat 19 with any affected satellite operators that are in the LEOP or drift path.

Good cause also exists for waiver to allow Intelsat to conduct IOT of the Intelsat 19 satellite at 176.0° E.L. in the 12250-12750 MHz downlink band because it will not cause harmful interference to any terrestrial stations or satellites.¹² Intelsat will conduct all IOT of these frequencies from an earth station located outside ITU Region 2 in Kumsan, South Korea. In addition, during IOT the satellite bias will be maintained such that transmissions from Intelsat 19 in the 12250-12750 MHz band into ITU Region 2 are limited geographically to ocean areas. As such, the transmissions during IOT will not affect terrestrial systems in ITU Region 2.

Space stations operating in the 12250-12750 MHz frequency band will not be impacted by IOT operations because Intelsat will coordinate with any affected satellite operators. Moreover, according to the ITU Region 2 BSS Plan, in the 12250-12700 MHz band, no BSS assignment can be located further west than 175.2° W.L. Hence, there is 8.8° of orbital separation between Intelsat 19 at 176° E.L., where the satellite will conduct in-orbit

⁹ ITU Radio Regulations, Art. 21.16 (2008). For ITU Region 2, PFD limits are specified only for non-geostationary satellites operating in the 11.7 – 12.7 GHz band. However, these limits may also be applied to geostationary satellites, since the PFD limit is intended to protect terrestrial stations from space station transmissions irrespective of whether the radiating space station is geostationary or non-geostationary. Actually, when converted to the same reference bandwidth, these limits are identical to those applicable to geostationary FSS space stations in Region 3.

¹⁰ See Intelsat 19 Application, Engineering Statement at Exhibit 10.

¹¹ It is noted that calculations in the Intelsat 19 application addressing the PFD produced on the Earth by the telemetry transmissions show that there is enough margin for the PFD to be met even when during LEOP the satellite is at a height lower than that corresponding to the geostationary orbit.

¹² See *supra* note 8.

Ms. Marlene H. Dortch
May 8, 2012
Page 5

testing, and the nearest BSS network that could provide service to any portion of ITU Region 2. With this orbital separation, there would be no risk of harmful interference to BSS networks from the operation of Intelsat 19 in the 12250-12700 MHz band. Moreover, there are no BSS satellites currently in operation at 175.2° W.L.; the nearest operational BSS satellite to Intelsat 19 that serves any portion of ITU Region 2 in the 12250-12700 MHz band is located at 129.0° W.L. Accordingly, no operational BSS satellite providing service to ITU Region 2 would be subjected to harmful interference from the Intelsat 19 telemetry transmissions.

Grant of this STA request and waiver of the U.S. Table of Frequency Allocations set forth in Section 2.106 of the FCC's rules will facilitate the safe launch of the Intelsat 19 satellite. The in-orbit testing of Intelsat 19 at 176.0° E.L. is a critical step in ensuring that the satellite will be fully operational. The subsequent drift of the satellite to 166.0° E.L. will ensure continuity of service to customers, and thereby promotes the public interest.

For the reasons set forth herein, Intelsat respectfully requests that the Commission grant this request.

Respectfully submitted,

Susan H. Crandall
Assistant General Counsel
Intelsat Corporation
