APPLICATION FOR SPECIAL TEMPORARY AUTHORITY

On July 18, 2012, the International Bureau granted Iridium Constellation LLC (“Iridium”) special temporary authority (“STA”) for 30 days to increase its total number of space stations operating in its mission constellation by co-locating two satellites.¹ Iridium hereby requests STA for an additional sixty (60) days—from August 17, 2012 through October 15, 2012—to continue to operate an additional, co-located satellite in its mission constellation.² The operation of 67 satellites is made possible by technological developments and software upgrades allowing Iridium to co-locate two satellites. Grant of this STA request will serve the public interest because it will enable more robust flexibility in the Iridium constellation, which in turn may also facilitate a more seamless transition to Iridium’s planned NEXT constellation. It will also provide more L-band connectivity and improved global service to users of the Iridium constellation, including first responders and significant government users such as the Department of Defense.

¹ See File No. SAT-STA-20120716-00116. On July 19, 2012, Iridium brought in-orbit spare satellite SV051 into operation in its mission constellation and filed a notice with the FCC. See Letter from Donna Bethea-Murphy, Iridium Constellation LLC, to Marlene H. Dortch, Federal Communications Commission (filed July 26, 2012).

² See 47 C.F.R. § 25.120(b)(2). Along with this application, Iridium is also filing a modification application seeking regular authority. See Iridium Constellation LLC, Application of Iridium Constellation LLC for Modification of Authorization, File No. SAT-MOD-20120813-00128 (filed Aug. 13, 2012) (“Iridium Modification Application”).

I. BACKGROUND

Until recently, Iridium operated a mission constellation of 66 satellites located in six orbital planes of eleven slots each in nearly circular polar orbits along with six in-orbit spares.³ Last month, Iridium commenced operating a pair of co-located satellites in plane 4, slot 7 of its NGSO constellation pursuant to a grant of special temporary authority.

The Iridium satellites operate in low-Earth-orbit and use spectrum in the “Big LEO” band.⁴ Most system processing is performed using software onboard each satellite instead of on the ground, which enables engineers to develop additional functionality and software-based solutions to occasional faults and anomalies in the system.⁵

II. REQUEST FOR SPECIAL TEMPORARY AUTHORITY

This request seeks continued special temporary authority for Iridium to add a satellite to its mission constellation. Specifically, Iridium placed one of its spare satellites, SV051, in its mission constellation in plane 4, slot 7 pursuant a grant of special temporary authority. That orbital position in the Iridium constellation is also occupied by SV007, which experienced a partial technical anomaly in 2009.⁶ SV051 is kept near the center of the orbital box for slot 7 in plane 4, and SV007 is located approximately 100 kilometers behind SV051. During the co-location, the SV051 satellite provides communications in the Big LEO Band while traffic routing

³ See *Motorola Satellite Communications, Inc. for Authority to Construct, Launch, and Operate a Low Earth Satellite System in the 1616-1626.5 MHz Band*, 10 FCC Rcd 2268 (1995) (authorizing Iridium’s predecessor in interest to launch and operate a NGSO mission constellation of 66 satellites in the Big LEO band).

⁴ See *Iridium Constellation LLC*, Order, 19 FCC Rcd 1474 (I.B. 2004).

⁵ *Iridium Communications Inc.*, United States Securities and Exchange Commission Form 10-K for year ending Dec. 31, 2011, at 15.

⁶ See *Iridium Communications Inc. 2009 Annual Report and Request for Confidential Treatment* (filed Oct. 15, 2009).

uses the SV007 satellite. As a result of this co-location, the Iridium constellation consists of a total of 67 satellites, with twelve instead of 11 satellites operating in plane 4. The additional satellite is technically identical to the other operational satellites in the Iridium constellation, and the technical information provided in Iridium's modification application and previously provided to the Commission is incorporated by reference herein.⁷

III. PUBLIC INTEREST STATEMENT

Grant of this STA request will serve the public interest. Co-location of these two Iridium spacecraft is made possible through technological developments. Iridium has designed software upgrades that improve communications routing and satellite tracking. Implementation of these new software changes has enabled Iridium effectively to co-locate two satellites in slot 7 of plane 4. The co-location of these two satellites will demonstrate more robust flexibility in the configuration of the Iridium constellation. Such system flexibility may also facilitate the seamless future transition to the planned Iridium NEXT constellation. More immediately, it will result in more consistent connectivity and improved service quality for customers.

Moreover, grant of this STA request poses no interference risk. The location of SV007 approximately 100 km behind SV051 ensures safe station-keeping of both satellites without any overlap in orbital position.⁸ In addition, the two satellites will operate in a complementary manner without increasing the number of satellites using Big LEO spectrum. Service link

⁸ The Iridium satellites operate with 6.0 km station-keeping. See Motorola November 15, 1994 Amendment, Table R-1 (Rev 1) – (Page 3 of 3).

communications in the Big LEO band will be provided only on the SV051 satellite, which will be located in the station-keeping box for plane 4, slot 7 as authorized by the Commission.

Finally, Iridium's software developments enable operation of both co-located satellites without harmful interference by connecting SV051 into the constellation using its forward crosslink and connecting SV007 into the constellation with its left and right crosslinks.

IV. CONCLUSION

Iridium respectfully requests that the Commission expeditiously grant this STA to permit continued operation of 67 satellites as described for a period of sixty (60) days.

Respectfully submitted,

By: Donna Bethea-Murphy
