

Exhibit F: Response to Item A21

PUBLIC INTEREST STATEMENT

Grant of transfer of the licensing authority for AMC-2 will serve the public interest by permitting relocation of AMC-2 to the nominal 5° E.L. orbital location to enable ASTRA AB to commence service in the C-band and additional Ku-band frequencies ahead of the launch of the SES-5 satellite, which has been delayed. The proposed move will permit efficient use of spectrum and orbital resources. AMC-2 will operate at the nominal 5° E.L. orbital location under Swedish ITU filings and in accordance with the coordination agreements applicable to those filings. As discussed in the narrative, all customers of AMC-2 will be moved to capacity on other spacecraft prior to the proposed relocation of the satellite, so there will be no adverse effect on users.
