

Non-U.S. Satellites Providing Service in the U.S. (Response to Question 42a)

One or more of the earth stations for which authority for *pro forma* assignment is sought have been previously authorized to transmit using specified non-U.S. satellites (many of which have also been added subsequently to the FCC's Ku-band Permitted List). No new authority to access non-U.S. satellites is sought in this application, and accordingly no new showing under Section 25.137 is required.
