LAW OFFICES OF THOMAS K. CROWE, P.C.

September 29, 2003

Towanda:

Last week we discussed Satuple, Inc.'s Earth Station application and making changes to the power for the 6.1 meter antenna so that the application would meet routine processing requirements.

Per your suggestion, our engineering firm has recalculated the numbers below for Antenna 2 on Site ID 1:

Total input power at antenna flange = 450 Watts
Total EIRP for all carriers (dbW) = 76.03
Maximum EIRP per carrier (dbW) = 76.03
Maximum EIRP density per carrier (dbW/4KHz) = 36.49
Maximum EIRP density toward the horizon (dbW/4KHz) = -14.01

Please don't hesitate to contact me if you need any additional information. Also, if you would like to see any other changes made to ensure that the application is acceptable please let me know.

Thanks.
